MARK SCHEME

Maximum Mark: 75

Published

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge International will not enter into discussions about these mark schemes.

Cambridge International is publishing the mark schemes for the May/June 2021 series for most Cambridge IGCSE™, Cambridge International A and AS Level components and some Cambridge O Level components.

This document consists of **9** printed pages.

Generic Marking Principles

These general marking principles must be applied by all examiners when marking candidate answers. They should be applied alongside the specific content of the mark scheme or generic level descriptors for a question. Each question paper and mark scheme will also comply with these marking principles.

GENERIC MARKING PRINCIPLE 1:

Marks must be awarded in line with:

- the specific content of the mark scheme or the generic level descriptors for the question
- the specific skills defined in the mark scheme or in the generic level descriptors for the question
- the standard of response required by a candidate as exemplified by the standardisation scripts.

GENERIC MARKING PRINCIPLE 2:

Marks awarded are always **whole marks** (not half marks, or other fractions).

GENERIC MARKING PRINCIPLE 3:

Marks must be awarded **positively**:

- marks are awarded for correct/valid answers, as defined in the mark scheme. However, credit is given for valid answers which go beyond the scope of the syllabus and mark scheme, referring to your Team Leader as appropriate
- marks are awarded when candidates clearly demonstrate what they know and can do
- marks are not deducted for errors
- marks are not deducted for omissions
- answers should only be judged on the quality of spelling, punctuation and grammar when these features are specifically assessed by the question as indicated by the mark scheme. The meaning, however, should be unambiguous.

GENERIC MARKING PRINCIPLE 4:

Rules must be applied consistently, e.g. in situations where candidates have not followed instructions or in the application of generic level descriptors.

GENERIC MARKING PRINCIPLE 5:

Marks should be awarded using the full range of marks defined in the mark scheme for the question (however; the use of the full mark range may be limited according to the quality of the candidate responses seen).

GENERIC MARKING PRINCIPLE 6:

Marks awarded are based solely on the requirements as defined in the mark scheme. Marks should not be awarded with grade thresholds or grade descriptors in mind.

Question	Answer	Marks
1(a)(i)	A – negative, <u>mantissa</u> starts with a one B – positive <u>mantissa</u> starts with a zero	2
1(a)(ii)	A mantissa: $-0.5 // -\frac{1}{2}$ A exponent: 2 B mantissa: $0.875 // 7/8$ B exponent: -1	4
1(a)(iii)	A: -2 B: $0.4375 // 7/16$	2
1(b)	Number: B Justification: Using the <u>mantissa</u> The first two bits are different // first bit 0 second bit 1	3

Question	Answer	Marks										
2(a)	<p>One mark for each correct row</p> <table border="1"> <thead> <tr> <th>Layer</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>Application</td> <td>Handles access to services // manages data exchange // defines protocols used</td> </tr> <tr> <td>Transport</td> <td>Handles the forwarding of packets</td> </tr> <tr> <td>Internet / Network</td> <td>Handles transmission of data /routing / IP addressing</td> </tr> <tr> <td>Network Access / Interface // (Data) Link // Physical</td> <td>Handles how data is physically sent</td> </tr> </tbody> </table>	Layer	Description	Application	Handles access to services // manages data exchange // defines protocols used	Transport	Handles the forwarding of packets	Internet / Network	Handles transmission of data /routing / IP addressing	Network Access / Interface // (Data) Link // Physical	Handles how data is physically sent	4
Layer	Description											
Application	Handles access to services // manages data exchange // defines protocols used											
Transport	Handles the forwarding of packets											
Internet / Network	Handles transmission of data /routing / IP addressing											
Network Access / Interface // (Data) Link // Physical	Handles how data is physically sent											
2(b)(i)	<p>One mark for each point max two</p> <ul style="list-style-type: none"> All data is (sent and received) using the same rules All data is (sent and received) using the same formats Allows communications between devices operating on different platforms The communication is independent of the software used The communication is independent of the hardware used 	2										

Question	Answer	Marks
2(b)(ii)	<p>One mark for protocol, one mark for description, one mark for use For example:</p> <p>Protocol: FTP// File Transfer Protocol Purpose: To directly transfer data between two computers over a network Use: upload and download files over the Internet</p> <p>Protocol: SMTP // Simple Mail Transfer Protocol Purpose: protocol for sending email Use: used by mail servers to forward email messages</p> <p>Protocol: POP3 //Post Office Protocol 3 // IMAP // Internet Message Access Protocol Purpose: mail is held for you by a remote server until you download it Use: to receive e-mail</p> <p>Protocol: BitTorrent Purpose: protocol for peer-to-peer file sharing Use: decentralised distribution of data</p> <p>Protocol: Ethernet Purpose: To send/receive data along a cable Use: for local area networks</p> <p>Protocol: HTTP(S)//Hypertext Transfer Protocol (Secure) Purpose: transfer of web pages/hypertext Use: browsing websites</p> <p>Protocol: WiMAX // Worldwide Interoperability for Microwave Access (AXess) Purpose: to provide wireless broadband Use: where there is no wired infrastructure</p>	3

Question	Answer	Marks
3	<p>One mark for each point to Max 6. Max 4 for Bus, max 4 for Star</p> <p>Bus Max 2:</p> <ul style="list-style-type: none"> • Diagram showing bus topology • Diagram with correct labels (e.g. Terminator, Workstation, Backbone) <p>Max 2:</p> <ul style="list-style-type: none"> • All nodes connected to a single cable ... • ... with a terminator at each end • Uses half duplex <p>Star Max 2:</p> <ul style="list-style-type: none"> • Diagram showing star topology • Diagram with correct labels (e.g. Server / Central Device, Workstation, Individual Connection) <p>Max 2:</p> <ul style="list-style-type: none"> • All nodes connected to a central device ... • ... each node has its own connection • All data is transferred via the central device • .. using a bi-directional connection 	6

Question	Answer	Marks																											
4(a)(i)	<p>One mark for 2 correct, two marks for 4 correct and no other terms</p> $X = \bar{P}.\bar{Q}.\bar{R}.\bar{S} + \bar{P}.\bar{Q}.R.\bar{S} + P.Q.\bar{R}.S + P.Q.R.S$	2																											
4(a)(ii)	<p>Two marks for fully correct K-map</p> <p>One mark for a K-map with one error</p> <p>Zero marks for a K-map with two or more errors</p> <p style="text-align: center;">PQ</p> <table border="1" style="margin-left: auto; margin-right: auto;"> <tr> <td></td> <td></td> <td>00</td> <td>01</td> <td>11</td> <td>10</td> </tr> <tr> <td rowspan="4" style="vertical-align: middle;">RS</td> <td>00</td> <td>1</td> <td>0</td> <td>0</td> <td>0</td> </tr> <tr> <td>01</td> <td>0</td> <td>0</td> <td>1</td> <td>0</td> </tr> <tr> <td>11</td> <td>0</td> <td>0</td> <td>1</td> <td>0</td> </tr> <tr> <td>10</td> <td>1</td> <td>0</td> <td>0</td> <td>0</td> </tr> </table>			00	01	11	10	RS	00	1	0	0	0	01	0	0	1	0	11	0	0	1	0	10	1	0	0	0	2
