

Cambridge International AS & A Level

GEOGRAPHY 9696/11

Paper 1 Core Physical Geography

May/June 2020

1 hour 30 minutes

You must answer on the enclosed answer booklet.

You will need: Answer booklet (enclosed)

Insert (enclosed)

INSTRUCTIONS

Answer four questions in total:

Section A: answer all questions.

Section B: answer one question.

- Follow the instructions on the front cover of the answer booklet. If you need additional answer paper, ask the invigilator for a continuation booklet.
- Sketch maps and diagrams should be drawn whenever they serve to illustrate an answer.

INFORMATION

- The total mark for this paper is 60.
- The number of marks for each question or part question is shown in brackets [].
- The insert contains all the resources referred to in the questions.

This document has 4 pages. Blank pages are indicated.

[Turn over

Section A

Answer all questions in this section. All questions carry 10 marks.

Hydrology and fluvial geomorphology

Fig. 1.1 shows part of a drainage basin system.

- (a) Using Fig. 1.1, name:

 (i) feature A [1]
 - (ii) flow B. [1]
 - (b) With reference to Fig. 1.1, describe **two** types of above ground flow. [4]
 - (c) Explain why channel storage may change over time. [4]

Atmosphere and weather

- **2** Fig. 2.1 shows a simplified diagram of one part of the energy budget over land and sea.
 - (a) Using Fig. 2.1:
 - (i) calculate the value of energy at A in W/m² [1]
 - (ii) name transfer B. [1]
 - (b) With reference to Fig. 2.1, describe the path of incoming (shortwave) solar radiation. [4]
 - (c) Explain why reflected solar radiation may vary over time. [4]

Rocks and weathering

- **3** Fig. 3.1 is a photograph which shows a slope being modified to reduce mass movement.
 - (a) Identify **two** methods of slope modification shown in the photograph in Fig. 3.1. [2]
 - **(b)** Describe how **one** method of slope modification in Fig. 3.1 increases the stability of the slope. [3]

(c) Explain the role of water in the movement of sediment on a hillslope. [5]

Section B

Answer one question from this section. All questions carry 30 marks.

Hydrology and fluvial geomorphology

- 4 (a) (i) Describe one way a spring is formed in an area. [3]
 - (ii) Briefly explain why some parts of a river are braided. [4]
 - (b) Explain the formation of floodplains and river bluffs. [8]
 - (c) With the aid of examples, assess the extent to which drainage basin size and shape influence flood risk. [15]

Atmosphere and weather

- **5** (a) (i) Define the atmospheric terms evaporation and radiation cooling. [4]
 - (ii) Briefly describe how ocean currents affect the atmospheric transfer of energy. [3]
 - **(b)** Explain how frontal uplift of air **and** orographic uplift of air cause precipitation. [8]
 - (c) 'The causes of global warming are only a result of human factors.'

With the aid of examples, how far do you agree? [15]

Rocks and weathering

- 6 (a) (i) Define the weathering terms pressure release (dilatation) and freeze-thaw. [4]
 - (ii) Briefly explain why some rock types are more affected by the weathering process of carbonation. [3]
 - (b) Explain how vegetation and relief affect the type of weathering. [8]
 - (c) 'All plate tectonic landforms are the result of subduction.'

With the aid of examples, how far do you agree? [15]
