CAMBRIDGE INTERNATIONAL EXAMINATIONS

GCE Advanced Subsidiary Level

MARK SCHEME for the May/June 2014 series

9709 MATHEMATICS

9709/23 Paper 2, maximum raw mark 50

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge will not enter into discussions about these mark schemes.

Cambridge is publishing the mark schemes for the May/June 2014 series for most IGCSE, GCE Advanced Level and Advanced Subsidiary Level components and some Ordinary Level components.

Mark Scheme Notes

Marks are of the following three types:

- M Method mark, awarded for a valid method applied to the problem. Method marks are not lost for numerical errors, algebraic slips or errors in units. However, it is not usually sufficient for a candidate just to indicate an intention of using some method or just to quote a formula; the formula or idea must be applied to the specific problem in hand, e.g. by substituting the relevant quantities into the formula. Correct application of a formula without the formula being quoted obviously earns the M mark and in some cases an M mark can be implied from a correct answer.
- A Accuracy mark, awarded for a correct answer or intermediate step correctly obtained. Accuracy marks cannot be given unless the associated method mark is earned (or implied).
- B Mark for a correct result or statement independent of method marks.
- When a part of a question has two or more "method" steps, the M marks are generally independent unless the scheme specifically says otherwise; and similarly when there are several B marks allocated. The notation DM or DB (or dep*) is used to indicate that a particular M or B mark is dependent on an earlier M or B (asterisked) mark in the scheme. When two or more steps are run together by the candidate, the earlier marks are implied and full credit is given.
- The symbol
 [↑] implies that the A or B mark indicated is allowed for work correctly following on from previously incorrect results. Otherwise, A or B marks are given for correct work only. A and B marks are not given for fortuitously "correct" answers or results obtained from incorrect working.
- Note: B2 or A2 means that the candidate can earn 2 or 0.
 B2/1/0 means that the candidate can earn anything from 0 to 2.

The marks indicated in the scheme may not be subdivided. If there is genuine doubt whether a candidate has earned a mark, allow the candidate the benefit of the doubt. Unless otherwise indicated, marks once gained cannot subsequently be lost, e.g. wrong working following a correct form of answer is ignored.

- Wrong or missing units in an answer should not lead to the loss of a mark unless the scheme specifically indicates otherwise.
- For a numerical answer, allow the A or B mark if a value is obtained which is correct to 3 s.f., or which would be correct to 3 s.f. if rounded (1 d.p. in the case of an angle). As stated above, an A or B mark is not given if a correct numerical answer arises fortuitously from incorrect working. For Mechanics questions, allow A or B marks for correct answers which arise from taking *g* equal to 9.8 or 9.81 instead of 10.

	GCE AS LEVEL – May/June 2014	9709	23

The following abbreviations may be used in a mark scheme or used on the scripts:

- AEF Any Equivalent Form (of answer is equally acceptable)
- AG Answer Given on the question paper (so extra checking is needed to ensure that the detailed working leading to the result is valid)
- BOD Benefit of Doubt (allowed when the validity of a solution may not be absolutely clear)
- CAO Correct Answer Only (emphasising that no "follow through" from a previous error is allowed)
- CWO Correct Working Only often written by a "fortuitous" answer
- ISW Ignore Subsequent Working
- MR Misread
- PA Premature Approximation (resulting in basically correct work that is insufficiently accurate)
- SOS See Other Solution (the candidate makes a better attempt at the same question)
- SR Special Ruling (detailing the mark to be given for a specific wrong solution, or a case where some standard marking practice is to be varied in the light of a particular circumstance)

Penalties

- MR –1 A penalty of MR –1 is deducted from A or B marks when the data of a question or part question are genuinely misread and the object and difficulty of the question remain unaltered. In this case all A and B marks then become "follow through √" marks. MR is not applied when the candidate misreads his own figures this is regarded as an error in accuracy. An MR–2 penalty may be applied in particular cases if agreed at the coordination meeting.
- PA –1 This is deducted from A or B marks in the case of premature approximation. The PA –1 penalty is usually discussed at the meeting.

			GCE AS LEVEL – May/June 2014 9709		23	
1	(i)	<u>Either</u>	Square both sides to obtain linear equation		M1	
	()		Obtain $x = \frac{165}{30}$ or $\frac{33}{6}$ or $\frac{11}{2}$		A1	[2]
		<u>Or</u>	Solve linear equation in which, initially, signs of x are diffe	rent	M1	
			Obtain $x + 2 = -x + 13$ or equivalent and hence $\frac{11}{2}$ or equiv	ralent	A1	[2]
			garithms and use power law		M1	
		Obtain <i>y</i>	$\log 3 = \log \frac{11}{2}$ and hence $y = 1.55$		A1	[2]
2	Use	$\sin 2\theta = 2$	$2\sin\theta\cos\theta$		B1	
	Simp	olify to ob	otain form $c_1 \sin^2 \theta = c_2$ or equivalent		M1	
			ne value of θ from equation of form $\sin \theta = k$		M1	
	Obta	in 35.3° a	and 144.7°		A1	[4]
3	(a)	Integrate	to obtain form $k \sin(\frac{1}{3}x + 2)$ where $k \neq 4$		M1	
		Obtain 12	$2\sin(\frac{1}{3}x+2) (+c)$		A1	[2]
	(b)	State or in	mply correct y-values 2, $\sqrt{20}$, $\sqrt{68}$, $\sqrt{148}$		B1	
			ect formula, or equivalent, with $h = 4$ and four y-values		M1	
		Obtain 79	9.2		A1	[3]
4	Obta	$\sin \frac{\mathrm{d}x}{\mathrm{d}t} = \frac{1}{t}$	$\frac{2}{1+1}$		В1	
		$\sin \frac{\mathrm{d}y}{\mathrm{d}t} = 4$			B1	
	Use	$\frac{\mathrm{d}y}{\mathrm{d}x} = \frac{\mathrm{d}y}{\mathrm{d}t} /$	$\frac{dx}{dt}$ with $t = 0$ to find gradient		M1	
	Obtain 2 Form equation of tangent through (0, 4) with numerical gradient obtained from attempt to			from attempt to di	A1 fferentiate	
		•		•	M1	
	Obta	$\sin 2x - y$	y + 4 = 0 or equivalent of required form		A1	[6]
5	State	or imply	$ \ln y = \ln K + px \ln 2 $		B1	
		in at least				
	1.87	$=\ln K + 1$	1.35 p ln 2, 3.81 = ln K + 3.35 p ln 2, $p ln 2 = \frac{3.81 - 1.87}{3.35 - 1.35}$			
		uivalents			В1	
		•	n(s) to find one constant, dependent on previous B1		M1	
		in $p = 1.4$			A1	
			attempt value of K 0.5605 and hence $K = 1.75$		DM1 A1	[6]
	Outa	ш шк =	0.3003 and hence K = 1.73		AI	[6]

			GCE AS LEVEL – May/June 2014 9709		23	
6	(i)	Substitute -2 and equate to zero, or divide and equate remainder to zero Obtain $a = 12$		M1 A1	[2]	
	(ii)	Carry out division, or equivalent, at least as far as x^2 and x terms in quotient		M1		
		Obtain x^2			A1	
			discriminant of a 3 term quadratic quotient (or equivalent)		DM1	
			20 (or equivalent)	lratia faatar	A1	[5]
		Conclude	by referring to, or implying, root -2 and no root from quad-	iratic factor	A1	[5]
7	(i)	Integrate	to obtain $ke^{3x} + mx^3$		M1	
		Apply bo	th limits to obtain $\frac{1}{6}e^{3a} + \frac{1}{3}a^3 - \frac{1}{6} = 10$ or equivalent		A1	
			e to form involving natural logarithm		DM1	
		_	$= \frac{1}{3} \ln(61 - 2a^3)$ with no errors seen (AG)		A1	[4]
	(ii)	Consider	sign of $a - \frac{1}{3}\ln(61 - 2a^3)$ for 1.0 and 1.5 or equivalent		M1	
		Obtain –0	0.36 and 0.17 or equivalent and justify conclusion		A1	[2]
	(iii)		ion process correctly at least once		M1	
			nal answer 1.343	a aion	A1	
			ficient iterations to 5 decimal places to justify answer or sho the interval (1.3425, 1.3435)	ow a sign	A1	[3]
8	(i)		ate using product rule		M1	
			$x^2 x \cos 2x - 2 \tan x \sin 2x$		A1	
			$x = 2\cos^2 x - 1$ or $\sin 2x = 2\sin x \cos x$ or both		B1	
		-	erivative in terms of $\sec x$ and $\cos x$ only		M1	
		Obtain 4	$\cos^2 x - \sec^2 x - 2$ with no errors seen (AG)		A1	[5]
	(ii)	State 4co	$s^4 x - 2\cos^2 x - 1 = 0$		B1	
		Apply quadratic formula to a 3 term quadratic equation in terms of $\cos^2 x$ to find the le		e least pos	sitive	
		value of o	$\cos^2 x$		M1	
		Obtain or	imply $\cos^2 x = \frac{1+\sqrt{5}}{4}$ or 0.809		A1	
		Obtain 0.4	•		A1	[4]
