CAMBRIDGE INTERNATIONAL EXAMINATIONS

GCE Advanced Level

MARK SCHEME for the May/June 2014 series

9709 MATHEMATICS

9709/32 Paper 3, maximum raw mark 75

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge will not enter into discussions about these mark schemes.

Cambridge is publishing the mark schemes for the May/June 2014 series for most IGCSE, GCE Advanced Level and Advanced Subsidiary Level components and some Ordinary Level components.

	GCE A LEVEL – May/June 2014	9709	32

Mark Scheme Notes

Marks are of the following three types:

- M Method mark, awarded for a valid method applied to the problem. Method marks are not lost for numerical errors, algebraic slips or errors in units. However, it is not usually sufficient for a candidate just to indicate an intention of using some method or just to quote a formula; the formula or idea must be applied to the specific problem in hand, e.g. by substituting the relevant quantities into the formula. Correct application of a formula without the formula being quoted obviously earns the M mark and in some cases an M mark can be implied from a correct answer.
- A Accuracy mark, awarded for a correct answer or intermediate step correctly obtained. Accuracy marks cannot be given unless the associated method mark is earned (or implied).
- **B** Mark for a correct result or statement independent of method marks.
 - When a part of a question has two or more "method" steps, the M marks are generally independent unless the scheme specifically says otherwise; and similarly when there are several B marks allocated. The notation DM or DB (or dep*) is used to indicate that a particular M or B mark is dependent on an earlier M or B (asterisked) mark in the scheme. When two or more steps are run together by the candidate, the earlier marks are implied and full credit is given.
 - The symbol v implies that the A or B mark indicated is allowed for work correctly following on from previously incorrect results. Otherwise, A or B marks are given for correct work only. A and B marks are not given for fortuitously "correct" answers or results obtained from incorrect working.
 - **Note:** B2 or A2 means that the candidate can earn 2 or 0. B2/1/0 means that the candidate can earn anything from 0 to 2.

The marks indicated in the scheme may not be subdivided. If there is genuine doubt whether a candidate has earned a mark, allow the candidate the benefit of the doubt. Unless otherwise indicated, marks once gained cannot subsequently be lost, e.g. wrong working following a correct form of answer is ignored.

- Wrong or missing units in an answer should not lead to the loss of a mark unless the scheme specifically indicates otherwise.
- For a numerical answer, allow the A or B mark if a value is obtained which is correct to 3 s.f., or which would be correct to 3 s.f. if rounded (1 d.p. in the case of an angle). As stated above, an A or B mark is not given if a correct numerical answer arises fortuitously from incorrect working. For Mechanics questions, allow A or B marks for correct answers which arise from taking *g* equal to 9.8 or 9.81 instead of 10.

Page 3	Mark Scheme	Syllabus	Paper
	GCE A LEVEL – May/June 2014	9709	32

The following abbreviations may be used in a mark scheme or used on the scripts:

AEF Any Equivalent Form (of answer is equally acceptable)

AG Answer Given on the question paper (so extra checking is needed to ensure that the detailed working leading to the result is valid)

BOD Benefit of Doubt (allowed when the validity of a solution may not be absolutely clear)

CAO Correct Answer Only (emphasising that no "follow through" from a previous error is allowed)

CWO Correct Working Only – often written by a "fortuitous" answer

ISW Ignore Subsequent Working

MR Misread

PA Premature Approximation (resulting in basically correct work that is insufficiently accurate)

SOS See Other Solution (the candidate makes a better attempt at the same question)

SR Special Ruling (detailing the mark to be given for a specific wrong solution, or a case where some standard marking practice is to be varied in the light of a particular circumstance)

Penalties

- MR 1 A penalty of MR 1 is deducted from A or B marks when the data of a question or part question are genuinely misread and the object and difficulty of the question remain unaltered. In this case all A and B marks then become "follow through √" marks. MR is not applied when the candidate misreads his own figures this is regarded as an error in accuracy. An MR 2 penalty may be applied in particular cases if agreed at the coordination meeting.
- **PA 1** This is deducted from A or B marks in the case of premature approximation. The PA 1 penalty is usually discussed at the meeting.

	GCE A LEVEL – May/June 2014	9709	32

- EITHER: State or imply non-modular inequality $(x+2a)^2 > (3(x-a))^2$, or corresponding 1
 - quadratic equation, or pair of linear equations $(x+2a)=\pm 3(x-a)$ **B**1

M1

5

Make reasonable solution attempt at a 3-term quadratic, or solve two linear equations

Obtain critical values $x = \frac{1}{4}a$ and $x = \frac{5}{2}a$ **A**1

State answer $\frac{1}{4}a < x < \frac{5}{2}a$ **A**1

OR: Obtain critical value $x = \frac{5}{2}a$ from a graphical method, or by inspection, or by solving a linear equation or inequality B1

Obtain critical value $x = \frac{1}{4}a$ similarly B2

State answer $\frac{1}{4}a < x < \frac{5}{2}a$ **B**1 4

[Do not condone \leq for \leq .]

Remove logarithms and obtain $5 - e^{-2x} = e^{\frac{1}{2}}$, or equivalent 2 **B**1

Obtain a correct value for e^{-2x} , e^{2x} , e^{-x} or e^{x} , e.g. $e^{2x} = 1/(5 - e^{\frac{1}{2}})$ B1

Use correct method to solve an equation of the form $e^{2x} = a$, $e^{-2x} = a$, $e^x = a$ or $e^{-x} = a$ where a > 0. [The M1 is dependent on the correct removal of logarithms.] M1

Obtain answer x = -0.605 only. 4 **A**1

3 Use cos(A + B) formula to obtain an equation in cos x and sin xM1Use trig formula to obtain an equation in $\tan x$ (or $\cos x$ or $\sin x$) M1

Obtain $\tan x = \sqrt{3} - 4$, or equivalent (or find $\cos x$ or $\sin x$) A₁

Obtain answer $x = -66.2^{\circ}$ **A**1 Obtain answer $x = 113.8^{\circ}$ and no others in the given interval A₁

[Ignore answers outside the given interval. Treat answers in radians as a misread (-1.16, 1.99).]

[The other solution methods are via $\cos x = \pm 1/\sqrt{(1+(\sqrt{3}-4)^2)}$ and

$$\sin x = \pm (\sqrt{3} - 4) / \sqrt{(1 + (\sqrt{3} - 4)^2)}$$
.]

(i) State $\frac{dx}{dt} = 1 - \sec^2 t$, or equivalent B1

Use chain rule M1

Obtain $\frac{dy}{dt} = -\frac{\sin t}{\cos t}$, or equivalent A₁

Use $\frac{dy}{dx} = \frac{dy}{dt} \div \frac{dx}{dt}$ M1

Obtain the given answer correctly. **A**1 5

(ii) State or imply $t = \tan^{-1}(\frac{1}{2})$ B1 Obtain answer x = -0.0364**B**1 2

5	(i)	Differenti	ate $f(x)$ and obtain $f'(x) = (x-2)^2 g'(x) + 2(x-2)g(x)$		B1	
3	(1)		that $(x-2)$ is a factor of $f'(x)$		B1	2
		Conclude			Di	_
	(ii)	EITHER:	Substitute $x = 2$, equate to zero and state a correct equation	n,		
			e.g. $32 + 16a + 24 + 4b + a = 0$ Differentiate polynomial substitute $x = 2$ and equate to	es zans an divid	B1	
			Differentiate polynomial, substitute $x = 2$ and equate t $(x-2)$ and equate constant remainder to zero	o zero or arvia	е бу М1*	
			Obtain a correct equation, e.g. $80 + 32a + 36 + 4b = 0$		A1	
		OR1:	Identify given polynomial with $(x-2)^2(x^3 + Ax^2 + Bx + C)$	C) and obtain an		
			equation in a and/or b	,	M1*	
			Obtain a correct equation, e.g. $\frac{1}{4}a - 4(4+a) + 4 = 3$		A1	
			Obtain a second correct equation, e.g. $-\frac{3}{4}a + 4(4+a) = b$		A1	
		OR2:	Divide given polynomial by $(x-2)^2$ and obtain an equati	on in a and b	M1*	
			Obtain a correct equation, e.g. $29 + 8a + b + 0$		A1	
		0.1.0	Obtain a second correct equation, e.g. $176 + 47a + 4b = 0$		A1	
		Solve for	a or for $b = -4$ and $b = 3$		M1(dep*)	5
		Obtain a	- $ +$ and $v - S$		Al	3
	(1)	**			3.61	
6	(i)		ct arc formula and form an equation in r and x correct equation in any form		M1 A1	
			e in the given form		A1	3
	(**)	G :1		1 6 1		
	(ii)		sign of a relevant expression at $x = 1$ and $x = 1.5$, or compans at $x = 1$ and $x = 1.5$	are values of rele	evant M1	
		_	the argument correctly with correct calculated values		A1	2
		-	-			
	(iii)		erative formula correctly at least once all answer 1.21		M1 A1	
			ficient iterations to 4 d.p. to justify 1.21 to 2 d.p., or show t	here is a sign ch		
		in the inte	erval (1.205,1.215)		A1	3
7	(a)	EITHER:	Substitute and expand $(-1 + \sqrt{5} i)^3$ completely		M1	
			Use $i^2 = -1$ correctly at least once		M1	
			Obtain $a = -12$		A1	
			State that the other complex root is $-1 - \sqrt{5}$ i		B1	
		OR1:	State that the other complex root is $-1 - \sqrt{5}$ i		B1	
			State the quadratic factor $z^2 + 2z + 6$		B1	
			Divide the cubic by a 3-term quadratic, equate remainder <i>a</i> or, using a 3-term quadratic, factorise the cubic and dete		e tor M1	
			Obtain $a = -12$	лино и	A1	
		OR2:	State that the other complex root is $-1 - \sqrt{5i}$		B1	
			State or show the third root is 2		B1	
			Use a valid method to determine a		M1	
		OR3:	Obtain $a = -12$ Substitute and use De Moivre to cube $\sqrt{6}$ cis(114.1°), or ea	guivalent	A1 M1	
		ONS.	Find the real and imaginary parts of the expression	quivaiciit	M1	
			Obtain $a = -12$		A1	
			State that the other complex root is $-1 - \sqrt{5i}$		B1	4
			-

	(b)	EITHER:	Substitute $w = \cos 2\theta + i \sin 2\theta$ in the given expression Use double angle formulae throughout Express numerator and denominator in terms of $\cos \theta$ and obtain given answer correctly	$\sin heta$ only	B1 M1 A1 A1	
		OR:	Substitute $w = e^{2i\theta}$ in the given expression Divide numerator and denominator by $e^{i\theta}$, or equivalent Express numerator and denominator in terms of $\cos \theta$ and $\sin \theta$	$\sin heta$ only	B1 M1 A1	
			Obtain the given answer correctly		A1	4
8	(i)	Differenti Obtain se	nct rule rivative in any correct form at first derivative using the product rule cond derivative in any correct form, e.g. $-\frac{1}{2}\sin\frac{1}{2}x - \frac{1}{4}x\cos\frac{1}{2}\cos\frac{1}{2}\sin\frac{1}{2}x - \frac{1}{4}\cos\frac{1}{2}\cos\frac{1}{2}\sin\frac{1}{2}\cos\frac$	$\frac{1}{2}x - \frac{1}{2}\sin\frac{1}{2}x$	M1 A1 M1 A1	5
	(ii)	Obtain 22 Obtain ind Use corre	and reach $kx \sin \frac{1}{2}x + l \int \sin \frac{1}{2}x dx$ $x \sin \frac{1}{2}x - 2 \int \sin \frac{1}{2}x dx$, or equivalent definite integral $2x \sin \frac{1}{2}x + 4 \cos \frac{1}{2}x$ ct limits $x = 0$, $x = \pi$ correctly swer $2\pi - 4$, or exact equivalent		M1* A1 A1 M1(dep*) A1	5
9	(i)	State or ir	inply $\frac{dN}{dt} = kN(1 - 0.01N)$ and obtain the given answer $k = 0$.02	B1	1
	(ii)	Integrate	variables and attempt integration of at least one side and obtain term $0.02t$, or equivalent a relevant method to obtain A or B such that $\frac{1}{N(1-0.01N)}$	$\equiv \frac{A}{N} + \frac{B}{1 - 0.01\lambda}$	$M1$ $A1$ \overline{I} , or	
		equivalen Obtain A : Integrate : Evaluate			M1* A1 A1√	
			rrect answer in any form, e.g. $\ln N - \ln(1 - 0.01N) = 0.02t + 0.000$ and obtain $t = 50 \ln(4N/(100 - N))$, or equivalent	- ln 25	A1 A1	8
	(iii)		N = 40 and obtain $t = 49.0$		B1	1

	Page 7		Mark Scheme	Syllabus	Paper	
			GCE A LEVEL – May/June 2014	9709	32	
10	(i)	EITHER:	State or imply \overrightarrow{AB} and \overrightarrow{AC} correctly in component form		B1	
			Using the correct processes evaluate the scalar product \overline{AB}	$\overrightarrow{B.AC}$, or equivalent	M1	
		Using the correct process for the moduli divide the scalar product by the				
			product of the moduli		M1	
			Obtain answer $\frac{20}{21}$		A1	
		OR:	Use correct method to find lengths of all sides of triangle	ABC	M1	
			Apply cosine rule correctly to find the cosine of angle BA	C	M1	
			Obtain answer $\frac{20}{21}$		A1	4
	(ii)	State an e	xact value for the sine of angle <i>BAC</i> , e.g. $\sqrt{41/21}$		B1√	
	. ,		ct area formula to find the area of triangle ABC		M1	
		Obtain an	swer $\frac{1}{2}\sqrt{41}$, or exact equivalent		A1	3
		[SR: Allo	we use of a vector product, e.g. $\overrightarrow{AB} \times \overrightarrow{AC} = -6\mathbf{i} + 2\mathbf{j} - \mathbf{k}$	B1 [√] . Using correct		
		process fo	or the modulus, divide the modulus by 2 M1. Obtain answer	$\frac{1}{2}\sqrt{41}$ A1.]		
	(iii)	EITHER:	State or obtain $b = 0$		B1	
			Equate scalar product of normal vector and \overrightarrow{BC} (or \overrightarrow{CB}) to	zero	M1	
			Obtain $a + b - 4c = 0$ (or $a - 4c = 0$)		A1	
			Substitute a relevant point in $4x + z = d$ and evaluate d		M1	
		0.01	Obtain answer $4x + z = 9$, or equivalent	(1) (1) (1)	A1	
		<i>OR</i> 1:	Attempt to calculate vector product of relevant vectors, e.g.	g. $(\mathbf{j}) \times (\mathbf{i} + \mathbf{j} - 4\mathbf{k})$	M1	
			Obtain two correct components of the product Obtain correct product, e.g. $-4\mathbf{i} - \mathbf{k}$		A1 A1	
			Substitute a relevant point in $4x + z = d$ and evaluate d		M1	
			Obtain $4x + z = 9$, or equivalent		A1	
		OR2:	Attempt to form 2-parameter equation for the plane with r	elevant vectors	M1	
			State a correct equation, e.g. $\mathbf{r} = 2\mathbf{i} + 4\mathbf{j} + \mathbf{k} + \lambda(\mathbf{j}) + \mu(\mathbf{i} + \mathbf{k})$	j – 4k)	A1	
			State 3 equations in x , y , z , λ and μ		A1	
			Eliminate μ Obtain answer $4x + z = 9$, or equivalent		M1 A1	
		OR3:	State or obtain $b = 0$		B1	
		ONS.	Substitute for B and C in the plane equation and obtain	ain 2a + c = d and		
			3a - 3c = d (or $2a + 4b + c = d$ and $3a + 5b - 3c = d$)		B1	
			Solve for one ratio, e.g. $a:d$		M1	
			Obtain $a:c:d$, or equivalent		M1	
		OR4:	Obtain answer $4x + z = 9$, or equivalent	ralazione viantara	A1 M1	
		OK4.	Attempt to form a determinant equation for the plane with $\begin{vmatrix} x-2 & y-4 & z-1 \end{vmatrix}$	relevant vectors	IVI I	
			State a correct equation, e.g. $\begin{vmatrix} 0 & 1 & 0 \\ 1 & 1 & -4 \end{vmatrix} = 0$		A1	
			Attempt to use a correct method to expand the determinan	t	M1	
			Obtain two correct terms of a 3-term expansion, or equiva		A1	
			Obtain answer $4x + z = 9$, or equivalent		A1	5
