**MATHEMATICS**

**9709/53**

Paper 5 Mechanics 2 (M2)

**May/June 2018**

**1 hour 15 minutes**

Candidates answer on the Question Paper.

Additional Materials: List of Formulae (MF9)

**READ THESE INSTRUCTIONS FIRST**

Write your Centre number, candidate number and name in the spaces at the top of this page.

Write in dark blue or black pen.

You may use an HB pencil for any diagrams or graphs.

Do not use staples, paper clips, glue or correction fluid.

**DO NOT WRITE IN ANY BARCODES.**

Answer **all** the questions in the space provided. If additional space is required, you should use the lined page at the end of this booklet. The question number(s) must be clearly shown.

Give non-exact numerical answers correct to 3 significant figures, or 1 decimal place in the case of angles in degrees, unless a different level of accuracy is specified in the question.

Where a numerical value for the acceleration due to gravity is needed, use  $10 \text{ m s}^{-2}$ .

The use of an electronic calculator is expected, where appropriate.

You are reminded of the need for clear presentation in your answers.

At the end of the examination, fasten all your work securely together.

The number of marks is given in brackets [ ] at the end of each question or part question.

The total number of marks for this paper is 50.

This document consists of **14** printed pages and **2** blank pages.

2

A non-uniform rod  $AB$  of length 0.5 m and weight 8 N is freely hinged to a fixed point at  $A$ . The rod makes an angle of  $30^\circ$  with the horizontal with  $B$  above the level of  $A$ . The rod is held in equilibrium by a force of magnitude 12 N acting in the vertical plane containing the rod at an angle of  $30^\circ$  to  $AB$  applied at  $B$  (see diagram). Find the distance of the centre of mass of the rod from  $A$ . [3]

4 A small object is projected from a point  $O$  with speed  $V \text{ m s}^{-1}$  at an angle of  $45^\circ$  above the horizontal. At time  $t \text{ s}$  after projection, the horizontal and vertically upwards displacements of the object from  $O$  are  $x \text{ m}$  and  $y \text{ m}$  respectively.

(i) Express  $x$  and  $y$  in terms of  $t$ , and hence find the equation of the path. [4]

5 A particle  $P$  of mass  $0.7\text{ kg}$  is attached by a light elastic string to a fixed point  $O$  on a smooth plane inclined at an angle of  $30^\circ$  to the horizontal. The natural length of the string is  $0.5\text{ m}$  and the modulus of elasticity is  $20\text{ N}$ . The particle  $P$  is projected up the line of greatest slope through  $O$  from a point  $A$  below the level of  $O$ . The initial kinetic energy of  $P$  is  $1.8\text{ J}$  and the initial elastic potential energy in the string is also  $1.8\text{ J}$ .

(i) Find the distance  $OA$ . [2]
