Paper 2 Further Pure Mathematics 2

October/November 2022

2 hours

You must answer on the question paper.

You will need: List of formulae (MF19)

INSTRUCTIONS

- Answer **all** questions.
- Use a black or dark blue pen. You may use an HB pencil for any diagrams or graphs.
- Write your name, centre number and candidate number in the boxes at the top of the page.
- Write your answer to each question in the space provided.
- Do **not** use an erasable pen or correction fluid.
- Do **not** write on any bar codes.
- If additional space is needed, you should use the lined page at the end of this booklet; the question number or numbers must be clearly shown.
- You should use a calculator where appropriate.
- You must show all necessary working clearly; no marks will be given for unsupported answers from a calculator.
- Give non-exact numerical answers correct to 3 significant figures, or 1 decimal place for angles in degrees, unless a different level of accuracy is specified in the question.

INFORMATION

- The total mark for this paper is 75.
- The number of marks for each question or part question is shown in brackets [].

This document has **16** pages.

- 1 (a) Find the set of values of k for which the system of equations

$$x + 2y + 3z = 1,$$

$$kx + 4y + 6z = 0,$$

$$7x + 8y + 9z = 3,$$

has a unique solution.

2 A curve has equation

$$(x+1)y + y^2 = 2.$$

- (a) Show that $\frac{dy}{dx} = -\frac{2}{3}$ at the point $(0, -2)$. [3]

.....
.....
.....
.....
.....
.....
.....
.....
.....
.....
.....
.....

- (b) Find the value of $\frac{d^2y}{dx^2}$ at the point $(0, -2)$. [4]

- 3 (a) A curve has equation $y = e^x + \frac{1}{4}e^{-x}$, for $0 \leq x \leq 1$. Find, in terms of π and e , the area of the surface generated when the curve is rotated through 2π radians about the x -axis. [6]

- (b) Using standard results from the list of formulae (MF19), or otherwise, find the Maclaurin's series for $e^x + \frac{1}{4}e^{-x}$ up to and including the term in x^2 . [2]

- 4 Find the solution of the differential equation

$$(4t^2 - 1) \frac{dx}{dt} + 4x = 4t^2 - 1$$

for which $x = 3$ when $t = 1$. Give your answer in the form $x = f(t)$.

[9]

- 5 (a) Write down the fourth roots of unity.

[1]

- (b) Use de Moivre's theorem to show that

$$\cos 4\theta = 8\cos^4\theta - 8\cos^2\theta + 1.$$

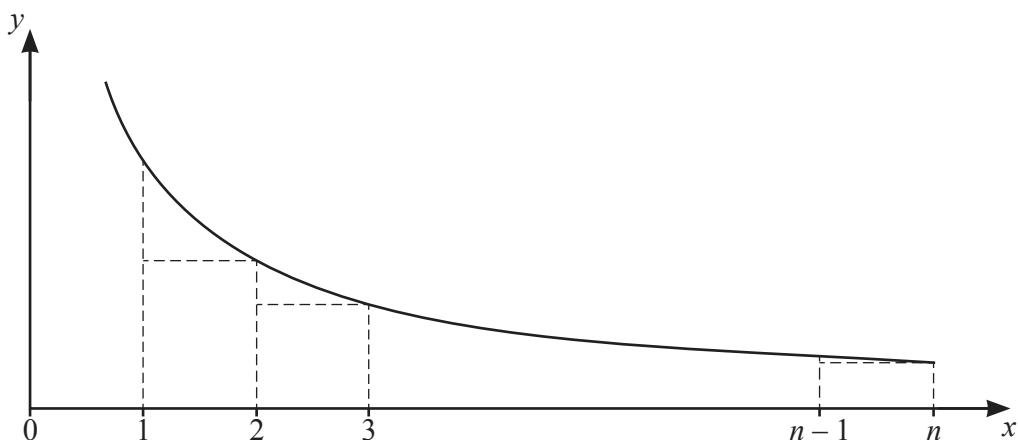

[4]

(c) Hence obtain the real roots of the equation

$$16(8x^4 - 8x^2 + 1)^4 - 9 = 0$$

in the form $\cos(q\pi)$, where q is a rational number. [5]

6

The diagram shows the curve $y = \frac{1}{\sqrt{x^2 + 2x}}$ for $x > 0$, together with a set of $(n-1)$ rectangles of unit width.

By considering the sum of the areas of these rectangles, show that

$$\sum_{r=1}^n \frac{1}{\sqrt{r^2 + 2r}} < \ln(n+1 + \sqrt{n^2 + 2n}) + \frac{1}{3}\sqrt{3} - \ln(2 + \sqrt{3}). \quad [10]$$

- 7 (a) It is given that λ is an eigenvalue of the non-singular square matrix \mathbf{A} , with corresponding eigenvector \mathbf{e} .

Show that λ^{-1} is an eigenvalue of \mathbf{A}^{-1} for which \mathbf{e} is a corresponding eigenvector. [2]

.....

The matrix \mathbf{A} is given by

$$\mathbf{A} = \begin{pmatrix} 2 & 0 & 3 \\ 15 & -4 & 3 \\ 3 & 0 & 2 \end{pmatrix}.$$

- (b) Given that -1 is an eigenvalue of \mathbf{A} , find a corresponding eigenvector. [2]

.....

- (c) It is also given that $\begin{pmatrix} 0 \\ 1 \\ 0 \end{pmatrix}$ and $\begin{pmatrix} 1 \\ 2 \\ 1 \end{pmatrix}$ are eigenvectors of \mathbf{A} . Find the corresponding eigenvalues. [2]

.....

- (d) Hence find a matrix \mathbf{P} and a diagonal matrix \mathbf{D} such that $\mathbf{A}^{-1} = \mathbf{P}\mathbf{D}\mathbf{P}^{-1}$. [2]

.....

.....

.....

.....

.....

.....

.....

.....

- (e) Use the characteristic equation of \mathbf{A} to show that $\mathbf{A}^{-1} = p\mathbf{A}^2 + q\mathbf{I}$, where p and q are rational numbers to be determined. [4]

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

- 8 It is given that $y = \cosh u$, where $u > 0$, and

$$\sqrt{\cosh^2 u - 1} \left(\frac{d^2 u}{dx^2} + \frac{du}{dx} \right) + \cosh u \left(\frac{du}{dx} \right)^2 - 2 \cosh u = 4e^{-x}.$$

(a) Show that

$$\frac{d^2 y}{dx^2} + \frac{dy}{dx} - 2y = 4e^{-x}. \quad [4]$$

.....
.....
.....
.....
.....
.....
.....
.....
.....
.....
.....
.....
.....
.....
.....
.....

(b) Find u in terms of x , given that, when $x = 0$, $u = \ln 3$ and $\frac{du}{dx} = 3$. [10]
