PHYSICS **9702/52**

Paper 5 Planning, Analysis and Evaluation **February/March 2021**

1 hour 15 minutes

You must answer on the question paper.

No additional materials are needed.

INSTRUCTIONS

- Answer **all** questions.
- Use a black or dark blue pen. You may use an HB pencil for any diagrams or graphs.
- Write your name, centre number and candidate number in the boxes at the top of the page.
- Write your answer to each question in the space provided.
- Do **not** use an erasable pen or correction fluid.
- Do **not** write on any bar codes.
- You may use a calculator.
- You should show all your working and use appropriate units.

INFORMATION

- The total mark for this paper is 30.
- The number of marks for each question or part question is shown in brackets [ ].

This document has **12** pages. Any blank pages are indicated.

1 A student investigates the vertical oscillations of a solid cylinder which floats in cooking oil. Fig. 1.1 shows a cylinder of radius *r*.

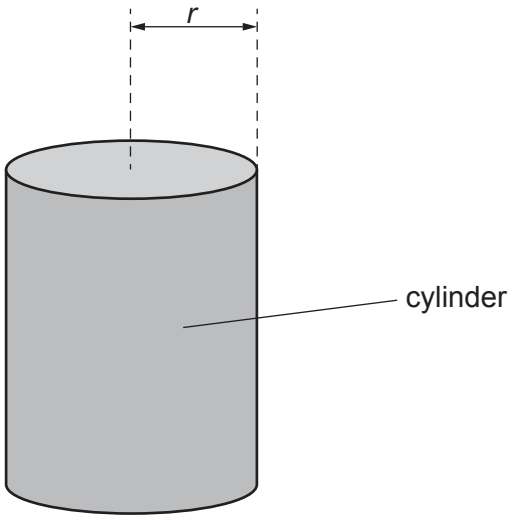

Fig. 1.1

The student places the cylinder of mass *m* in the oil. The cylinder is displaced vertically from its equilibrium position and released so that it oscillates. The period *T* of the oscillations is determined.

A number of cylinders of different mass are available.

It is suggested that the relationship between *T* and *m* is

$$T = 2\sqrt{\frac{\pi m}{\sigma K r^2}}$$

where σ is the density of the oil and *K* is a constant.

Design a laboratory experiment to test the relationship between *T* and *m*.
Explain how your results could be used to determine a value for *K*.

You should draw a diagram, on page 3, showing the arrangement of your equipment. In your account you should pay particular attention to:

- the procedure to be followed
- the measurements to be taken
- the control of variables
- the analysis of the data
- any safety precautions to be taken.

Diagram

[15]

2 A student investigates the collision of two gliders A and B on a linear air-track, as shown in Fig. 2.1.

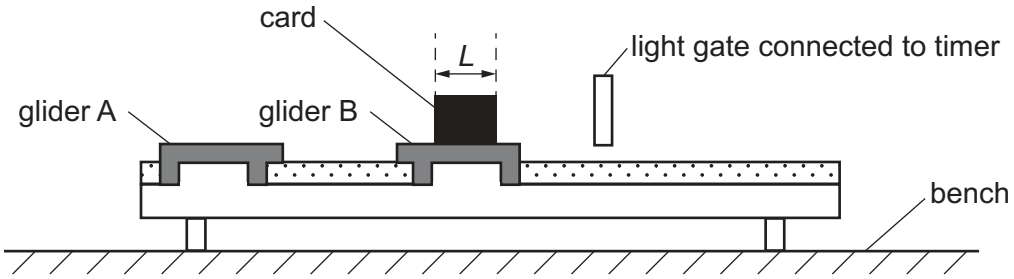

Fig. 2.1

The light gate is connected to a timer. A card of length L is attached to glider B. The mass of glider B and the card is m. Glider B is initially at rest.

The student releases glider A so that it travels at a constant velocity u towards the stationary glider B. The gliders collide and then separate.

The card on glider B passes through the light gate. The student records the time t for the card to pass through the light gate from the timer.

The student changes the mass of glider B and repeats the experiment.

It is suggested that the velocity v of glider B as it passes through the light gate and m are related by the equation

$$v = \frac{2uA}{m + A}$$

where A is the mass of glider A.

(a) A graph is plotted of $\frac{1}{v}$ on the y-axis against m on the x-axis.

Determine expressions for the gradient and y-intercept.

gradient = ...

y-intercept = ...

[1]

(b) Values of m and t are given in Table 2.1.

Table 2.1

m / g	t / s	$\frac{1}{v}$ / s cm^{-1}
271	0.23 ± 0.01	
369	0.26 ± 0.01	
490	0.31 ± 0.01	
632	0.36 ± 0.01	
741	0.40 ± 0.01	
840	0.44 ± 0.01	

Calculate and record values of $\frac{1}{v}$ / s cm^{-1} in Table 2.1 where

$$\frac{1}{v} = \frac{t}{L}$$

and L = 5.0 ± 0.1 cm.

Include the absolute uncertainties in $\frac{1}{v}$. [2]

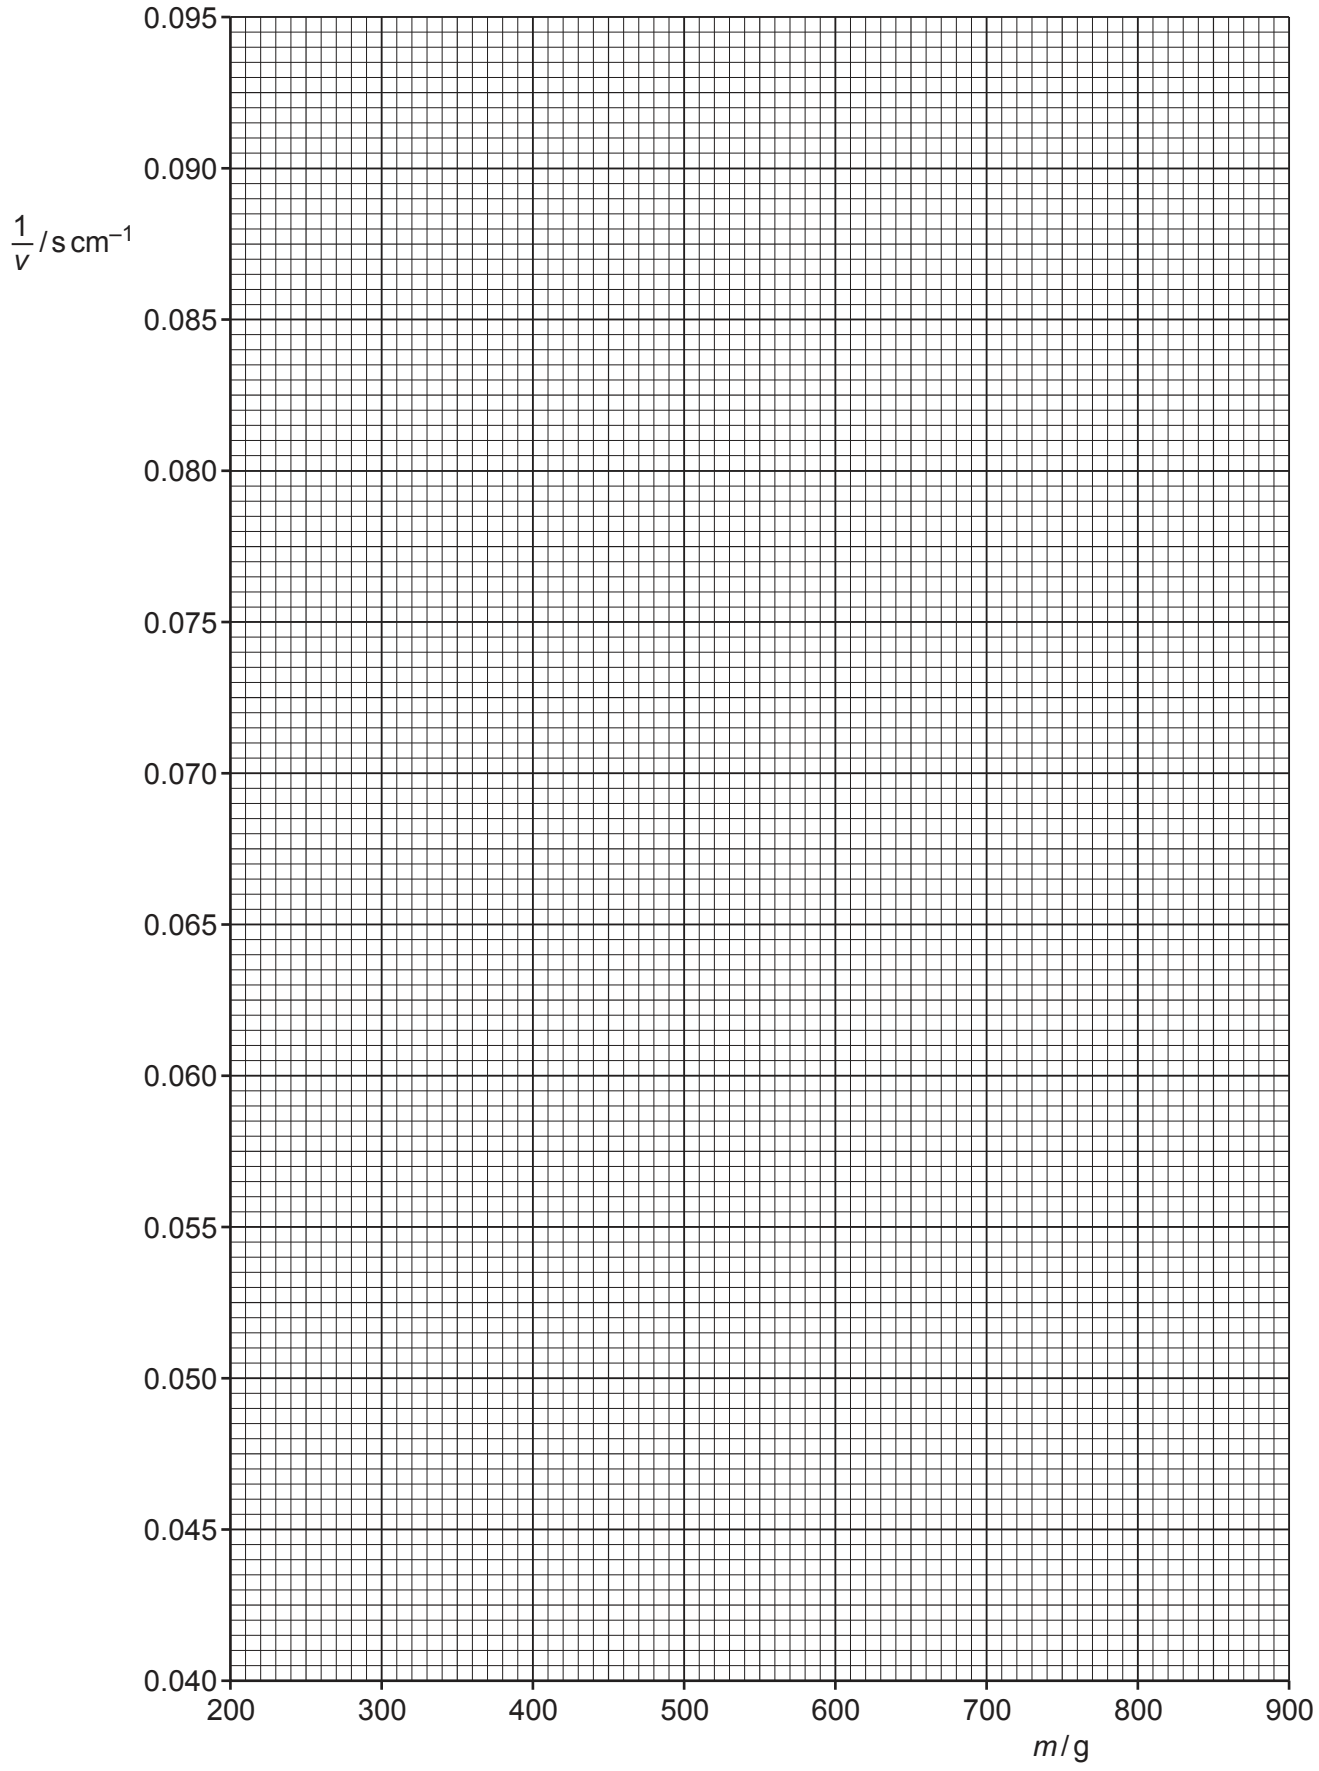
(c) **(i)** Plot a graph of $\frac{1}{v}$ / s cm^{-1} against m / g.

Include error bars for $\frac{1}{v}$. [2]

(ii) Draw the straight line of best fit and a worst acceptable straight line on your graph. Both lines should be clearly labelled. [2]

(iii) Determine the gradient of the line of best fit. Include the absolute uncertainty in your answer.

gradient = ... [2]



(iv) Determine the *y*-intercept of the line of best fit. Include the absolute uncertainty in your answer.

y-intercept = ... [2]

(d) (i) Using your answers to **(a)**, **(c)(iii)** and **(c)(iv)**, determine values of *u* and *A*. Include appropriate units.

u = ...

A = ...
[2]

(ii) Determine the percentage uncertainty in *A*.

percentage uncertainty in *A* = ... % [1]

(e) The experiment is repeated. Determine the mass *m* of glider B and the card when *t* has a value of 0.50 s.

m = ... g [1]

[Total: 15]
