PHYSICS **9702/23**

Paper 2 AS Level Structured Questions **May/June 2025**

MARK SCHEME

Maximum Mark: 60

Published

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge International will not enter into discussions about these mark schemes.

Cambridge International is publishing the mark schemes for the May/June 2025 series for most Cambridge IGCSE, Cambridge International A and AS Level components, and some Cambridge O Level components.

Generic Marking Principles

These general marking principles must be applied by all examiners when marking candidate answers. They should be applied alongside the specific content of the mark scheme or generic level descriptions for a question. Each question paper and mark scheme will also comply with these marking principles.

GENERIC MARKING PRINCIPLE 1:

Marks must be awarded in line with:

- the specific content of the mark scheme or the generic level descriptors for the question
- the specific skills defined in the mark scheme or in the generic level descriptors for the question
- the standard of response required by a candidate as exemplified by the standardisation scripts.

GENERIC MARKING PRINCIPLE 2:

Marks awarded are always **whole marks** (not half marks, or other fractions).

GENERIC MARKING PRINCIPLE 3:

Marks must be awarded **positively**:

- marks are awarded for correct/valid answers, as defined in the mark scheme. However, credit is given for valid answers which go beyond the scope of the syllabus and mark scheme, referring to your Team Leader as appropriate
- marks are awarded when candidates clearly demonstrate what they know and can do
- marks are not deducted for errors
- marks are not deducted for omissions
- answers should only be judged on the quality of spelling, punctuation and grammar when these features are specifically assessed by the question as indicated by the mark scheme. The meaning, however, should be unambiguous.

GENERIC MARKING PRINCIPLE 4:

Rules must be applied consistently, e.g. in situations where candidates have not followed instructions or in the application of generic level descriptors.

GENERIC MARKING PRINCIPLE 5: Marks should be awarded using the full range of marks defined in the mark scheme for the question (however; the use of the full mark range may be limited according to the quality of the candidate responses seen).
GENERIC MARKING PRINCIPLE 6: Marks awarded are based solely on the requirements as defined in the mark scheme. Marks should not be awarded with grade thresholds or grade descriptors in mind.

Science-Specific Marking Principles

1	Examiners should consider the context and scientific use of any keywords when awarding marks. Although keywords may be present, marks should not be awarded if the keywords are used incorrectly.
2	The examiner should not choose between contradictory statements given in the same question part, and credit should not be awarded for any correct statement that is contradicted within the same question part. Wrong science that is irrelevant to the question should be ignored.
3	Although spellings do not have to be correct, spellings of syllabus terms must allow for clear and unambiguous separation from other syllabus terms with which they may be confused (e.g. ethane / ethene, glucagon / glycogen, refraction / reflection).
4	The error carried forward (ecf) principle should be applied, where appropriate. If an incorrect answer is subsequently used in a scientifically correct way, the candidate should be awarded these subsequent marking points. Further guidance will be included in the mark scheme where necessary and any exceptions to this general principle will be noted.
5	‘List rule’ guidance For questions that require ***n*** responses (e.g. State **two** reasons …): • The response should be read as continuous prose, even when numbered answer spaces are provided. • Any response marked *ignore* in the mark scheme should not count towards ***n***. • Incorrect responses should not be awarded credit but will still count towards ***n***. • Read the entire response to check for any responses that contradict those that would otherwise be credited. Credit should **not** be awarded for any responses that are contradicted within the rest of the response. Where two responses contradict one another, this should be treated as a single incorrect response. • Non-contradictory responses after the first ***n*** responses may be ignored even if they include incorrect science.

6 Calculation specific guidance

Correct answers to calculations should be given full credit even if there is no working or incorrect working, **unless** the question states 'show your working'.

For questions in which the number of significant figures required is not stated, credit should be awarded for correct answers when rounded by the examiner to the number of significant figures given in the mark scheme. This may not apply to measured values.

For answers given in standard form (e.g. $a \times 10^n$) in which the convention of restricting the value of the coefficient (a) to a value between 1 and 10 is not followed, credit may still be awarded if the answer can be converted to the answer given in the mark scheme.

Unless a separate mark is given for a unit, a missing or incorrect unit will normally mean that the final calculation mark is not awarded. Exceptions to this general principle will be noted in the mark scheme.

7 Guidance for chemical equations

Multiples / fractions of coefficients used in chemical equations are acceptable unless stated otherwise in the mark scheme.

State symbols given in an equation should be ignored unless asked for in the question or stated otherwise in the mark scheme.

Annotations guidance for centres

Examiners use a system of annotations as a shorthand for communicating their marking decisions to one another. Examiners are trained during the standardisation process on how and when to use annotations. The purpose of annotations is to inform the standardisation and monitoring processes and guide the supervising examiners when they are checking the work of examiners within their team. The meaning of annotations and how they are used is specific to each component and is understood by all examiners who mark the component.

We publish annotations in our mark schemes to help centres understand the annotations they may see on copies of scripts. Note that there may not be a direct correlation between the number of annotations on a script and the mark awarded. Similarly, the use of an annotation may not be an indication of the quality of the response.

The annotations listed below were available to examiners marking this component in this series.

Annotations

Annotation	Meaning
A	Information missing or insufficient for credit
AE	Arithmetic error
BOD	Benefit of the doubt given
CON	Contradiction in response, mark not awarded
	Incorrect point or mark not awarded
ECF	Error carried forward applied
I	Ignore the response
MO	Mandatory mark not awarded
POT	Power of ten error
SEEN	Blank page seen
SF	Error in number of significant figures

Annotation	Meaning
TE	Transcription error
✓	Correct point or mark awarded
XP	Incorrect physics

Abbreviations

/	Alternative and acceptable answers for the same marking point.
( )	Bracketed content indicates words which do not need to be explicitly seen to gain credit but which indicate the **context** for an answer. The context does not need to be seen but if a context is given that is incorrect then the mark should not be awarded.
___	Underlined content must be present in answer to award the mark. This means either the exact word or another word that has the same technical meaning.

Mark categories

B marks	These are independent marks, which do not depend on other marks. For a **B** mark to be awarded, the point to which it refers must be seen specifically in the candidate's answer.
M marks	These are method marks upon which **A** marks later depend. For an **M** mark to be awarded, the point to which it refers must be seen specifically in the candidate's answer. If a candidate is not awarded an **M** mark, then the later **A** mark cannot be awarded either.
C marks	These are compensatory marks which can be awarded even if the points to which they refer are not written down by the candidate, providing subsequent working gives evidence that they must have known them. For example, if an equation carries a **C** mark and the candidate does not write down the actual equation but does correct working which shows the candidate knew the equation, then the **C** mark is awarded. If a correct answer is given to a numerical question, all of the preceding **C** marks are awarded automatically. It is only necessary to consider each of the **C** marks in turn when the numerical answer is not correct.
A marks	These are answer marks. They may depend on an **M** mark or allow a **C** mark to be awarded by implication.

Question	Answer	Marks
1(a)	Rate of change of displacement	**B1**
1(b)	For object A: $s = ut + \frac{1}{2}at^2$ so $t = \sqrt{\frac{2\times 10}{9.81}}$ =1.4	**C1**
	Then for object B: $s = ut + \frac{1}{2}at^2$ $h = -(3\times 1.4) + (0.5 \times 9.81 \times 1.4^2)$	**C1**
	= 5.7 m	**A1**
	OR $h = -(3\times 1.4) + 10$	**(C1)**
	= 5.7 m	**(A1)**
1(c)(i)	time taken (to reach the ground is) same	**B1**
	The initial vertical (component of the) velocity is the same (as in part **(1b)**)	**B1**
1(c)(ii)	The (total) initial energy is greater (than in part **(1b)**)	**B1**
	change in gravitational potential energy is same, so speed is greater	**B1**

Question	Answer	Marks
2(a)	force × perpendicular distance (of line of action of force to / from the point)	**B1**
2(b)(i)	$150 \times 9.81 \times 4.5$ **or** $90 \times 9.81 \times 4.5$ **or** $3.0 \times 9.81 \times m$	**C1**
	$(150 \times 9.81 \times 4.5) = (90 \times 9.81 \times 4.5) + (3.0 \times 9.81 \times m)$	**C1**
	$m = 90$ kg	**A1**
2(b)(ii)	Young modulus = σ / ε **or** $F / A\varepsilon$ **or** FL / Ax	**C1**
	Area of wire = $\pi \times (1.8 \times 10^{-3} / 2)^2$ $= 2.5 \times 10^{-6}$	**C1**
	So Young modulus = $((90 \times 9.81) / \pi \times (9.0 \times 10^{-4})^2) / 1.2 \times 10^{-3}$ $= 2.9 \times 10^{11}$ Pa	**A1**
2(b)(iii)	Moment provided by B will decrease / moment due to wire will increase	**B1**
	So force acting on wire will increase (Young's modulus and area remain constant) and the strain will increase	**B1**

Question	Answer	Marks
3(a)	$W = Fd$	**B1**
	$P = Fd / t = Fv$ **or** $P = Fvt / t = Fv$	**B1**
3(b)(i)	$(\Delta)E_{(P)} = mg(\Delta)h$	**C1**
	increase of gravitational potential energy of car in 1.0 s $= 1500 \times 9.81 \times 30 \times \sin 6.0 = 46\,000$ J	**A1**

Question	Answer	Marks
3(b)(ii)	(Power to overcome total resistive forces) = 1600 × 30 = 48 000 W	**C1**
	power = 48 000 + 46 000 = 9.4×10^4 W	**A1**
3(c)(i)	Air resistance is the same, as the speed is the same	B1
3(c)(ii)	Mass / weight has increased so (power will) increase	**B1**

Question	Answer	Marks
4(a)	sum / total momentum (of a system of bodies) is constant **or** sum / total momentum before = sum / total momentum after	**M1**
	for an isolated system / no (resultant) external force	**A1**
4(b)(i)	$p = mv$ **or** 4.0×6.0 or 2.0×3.0 $(4.0 \times 6.0) + (2.0 \times 3.0) = 6.0 \times v$	**C1**
	so $v = 5.0\ \text{m s}^{-1}$	**A1**

Question	Answer	Marks
4(b)(ii)	KE before = $(0.5 \times 4.0 \times 6.0^2) + (0.5 \times 2.0 \times 3.0^2)$ = 81 J	**C1**
	KE after = $(0.5 \times 6.0 \times 5.0^2)$ = 75 J	**(C1)**
	percentage transferred = $[(81 - 75) / 81] \times 100$ = 7%	**A1**

Question	Answer	Marks
5(a)	sound waves are longitudinal / not transverse (and only transverse waves can be polarised)	**B1**
5(b)(i)	A periodic curve of at least one period with minimum 0 and maximum I_0	**B1**
	Smooth continuous $\sin^2\alpha$ curve	**B1**
	Peaks at 90° and 270° **and** troughs at 0, 180° and 360°	**B1**
5(b)(ii)	$I \propto A^2$	**C1**
	$I = I_0 \cos^2 \theta$	**C1**
	At $\alpha = 20°$ the angle between the planes of polarisation of light and filter is 70° (or 110°) $I = I_0 \cos^2 70$ **or** $I = I_0 \cos^2 110$ ($I = 0.12\ I_0$)	**C1**
	amplitude = $0.34\ A_0$	**A1**

Question	Answer	Marks
6(a)	wave passes (through) an aperture and spreads **or** wave passes (by / through / around) an edge and spreads	B1
6(b)(i)	$v = f\lambda$	**C1**
	$f = 3.00 \times 10^8 / 720 \times 10^{-9}$ $= 4.2 \times 10^{14}$ Hz	**A1**
6(b)(ii)	$d = n\lambda / \sin\theta$	**C1**
	$d = (2 \times 720 \times 10^{-9}) / \sin 26$	**C1**
	$(= 3.3 \times 10^{-6}$ m) number of lines per m $= 1 / (3.3 \times 10^{-6})$ $= 3.0 \times 10^5$ m^{-1}	**A1**
6(b)(iii)	$\lambda \times 3 = 720 \times 2$ **or** $\frac{1}{3.0 \times 10^5} \sin 26 = 3\lambda$	**C1**
	$\lambda = 480$ nm	**A1**

Question	Answer	Marks
7(a)	$R = \rho L / A$	**C1**
	$= (1.12 \times 10^{-6} \times 1.5) / 2.45 \times 10^{-7}$	**C1**
	$= 6.86\,\Omega$	**A1**
7(b)(i)	(A method where the) reading (on the galvanometer) is zero.	**B1**

Question	Answer	Marks
7(b)(ii)	e.m.f. / 1.2 = 64 / 150	C1
	e.m.f. = (64 / 150) × 1.2 = 0.51 V	A1
7(b)(iii)	(the internal resistance will cause a) drop in p.d. across the wire / the terminal p.d. is lower	B1
	So the null point will move to the right	B1

Question	Answer	Marks
8(a)	<table><tr><th>flavour</th><th>charge / e</th></tr><tr><td>up / u</td><td>$-\frac{2}{3}$</td></tr><tr><td>down / d</td><td>$(+)\frac{1}{3}$</td></tr><tr><td>down / d</td><td>$(+)\frac{1}{3}$</td></tr></table>	
	3 correct quark flavours	B1
	Charge on anti-up quark –⅔(e)	B1
	Charge on anti-down quark (+)⅓(e)	B1
8(b)	particle: (electron) neutrino	B1
	antiparticle: positron	B1
