Cambridge International Examinations
Cambridge International Advanced Subsidiary and Advanced Level

READ THESE INSTRUCTIONS FIRST

Write your Centre number, candidate number and name on all the work you hand in.
Write in dark blue or black pen.
You may use an HB pencil for any diagrams or graphs.
Do not use staples, paper clips, glue or correction fluid.
DO NOT WRITE IN ANY BARCODES.

Section A
Answer all questions.

Section B
Answer one question.

Electronic calculators may be used.
You may lose marks if you do not show your working or if you do not use appropriate units.

At the end of the examination, fasten all your work securely together.
The number of marks is given in brackets [ ] at the end of each question or part question.
1. (a) ATP and NAD both play important roles in respiration. Both compounds are nucleotides.

Fig. 1.1 represents the molecular structures of ATP and NAD.

**Fig. 1.1**

Using Fig. 1.1, compare the structures of ATP and NAD.

...................................................................................................................................................
................................................................................................................................................... [3]
(b) ATP provides an immediate energy source for metabolic processes such as anabolic reactions.

State two examples of anabolic reactions in a mammal that require ATP as an energy source.

1 .......................................................................................................................................................... [2]

2 ..........................................................................................................................................................

(c) Name the type of chemical reaction by which ATP is made during the Krebs cycle.

.......................................................................................................................................................... [1]

(d) Outline the roles of NAD in the cytoplasm of a cell.

..........................................................................................................................................................

..........................................................................................................................................................

..........................................................................................................................................................

..........................................................................................................................................................

..........................................................................................................................................................

.......................................................................................................................................................... [2]

(e) Carbohydrates and lipids are used as respiratory substrates.

Table 1.1 shows the energy values of carbohydrates and lipids.

<table>
<thead>
<tr>
<th>respiratory substrate</th>
<th>energy value/kJ g(^{-1})</th>
</tr>
</thead>
<tbody>
<tr>
<td>carbohydrate</td>
<td>15.8</td>
</tr>
<tr>
<td>lipid</td>
<td>39.4</td>
</tr>
</tbody>
</table>

Explain why lipids have a higher energy value than carbohydrates.

[Total: 10]
2 The concentration of carbon dioxide in the atmosphere and the light intensity often limit the rate of photosynthesis.

(a) Explain what is meant by a *limiting factor* in relation to photosynthesis.

...................................................................................................................................................

...................................................................................................................................................
...................................................................................................................................................
...................................................................................................................................................
.............................................................................................................................................. [2]

(b) Investigations were carried out in Florida, USA, into the effect of different concentrations of atmospheric carbon dioxide and of light intensity on the rate of photosynthesis of soybean plants.

Plants were grown from seed in outdoor, computer-controlled growth chambers at different concentrations of carbon dioxide. The upper parts of the chambers were transparent so that the plants received natural sunlight.

After the seedlings emerged, the air in the soil was separated from the air around the leaves by a gas-tight seal in each chamber.

Suggest why the air in the soil and the air around the leaves of the plants were separated.

...................................................................................................................................................
...................................................................................................................................................
...................................................................................................................................................
.............................................................................................................................................. [2]

(c) In one investigation, two sets of plants, A and B, were grown from seed at different concentrations of carbon dioxide:

- **A** – normal atmospheric concentration of carbon dioxide (0.033%)
- **B** – normal atmospheric concentration of carbon dioxide ×2 (0.066%).

Then, keeping each set of plants in its particular concentration of carbon dioxide, measurements were made of their rates of photosynthesis at different light intensities.

The results are shown in Fig. 2.1 on page 5.
With reference to Fig. 2.1:

(i) describe and explain, in terms of limiting factors, the results from the plants in set A
...........................................................................................................................................

...........................................................................................................................................
...........................................................................................................................................
...........................................................................................................................................
........................................................................................................................................... [2]
(d) In a second investigation, two sets of plants, C and D, were grown from seed, as before, in different carbon dioxide concentrations:

- **C** – normal atmospheric concentration of carbon dioxide (0.033%)
- **D** – normal atmospheric concentration of carbon dioxide ×2 (0.066%).

When the plants matured, conditions in the growth chambers were changed to investigate the rate of photosynthesis of each set of plants in different concentrations of carbon dioxide.

The results are shown in Fig. 2.2.
Suggest explanations for the higher rate of photosynthesis per unit area of leaf shown by the plants in set D compared with those in set C.

[Total: 13]
Malaria is a serious and often fatal infectious disease caused by *Plasmodium*. Drugs such as chloroquine are widely used to decrease the risk of getting malaria and also to treat people who have become infected. However, in many parts of the world, *Plasmodium* populations have become resistant to chloroquine.

Sequencing the genome of *Plasmodium* and the application of bioinformatics has provided several new targets for the development of anti-malarial drugs.

(a) (i) Define the term *bioinformatics*.

...................................................................................................................................................
...................................................................................................................................................
...................................................................................................................................................
...................................................................................................................................................
...................................................................................................................................................
...................................................................................................................................................

...................................................................................................................................................
...................................................................................................................................................
...................................................................................................................................................
...................................................................................................................................................
...................................................................................................................................................
...................................................................................................................................................
................................................................................................................................................... [2]

(ii) Outline how sequencing the genome of *Plasmodium* and the use of bioinformatics can suggest new targets for anti-malarial drugs.

...................................................................................................................................................
...................................................................................................................................................
...................................................................................................................................................
...................................................................................................................................................
...................................................................................................................................................

...................................................................................................................................................
...................................................................................................................................................
...................................................................................................................................................
...................................................................................................................................................
...................................................................................................................................................
...................................................................................................................................................
...................................................................................................................................................
................................................................................................................................................... [3]
(b) In parts of the world where *Plasmodium* is resistant to chloroquine, one of the most effective anti-malarial drugs currently in use is artemisinin. Artemisinin works by binding to an enzyme in *Plasmodium* called PfATP6, acting as an inhibitor.

A substance called curcumin, which has long been used as a spice and yellow food colouring in India and other countries, is also known to act against chloroquine-resistant *Plasmodium*. A group of researchers predicted that curcumin acts by binding to the same enzyme as artemisinin.

In order to test this hypothesis, and to try to find similar substances that might work even better than curcumin, the researchers used theoretical modelling to:

* look at the chemical structures of various molecules with a similar structure to curcumin (curcumin analogues)
* generate a three-dimensional model of the structure of the enzyme PfATP6
* investigate whether each curcumin analogue could bind to PfATP6.

The researchers predicted that several of the curcumin analogues would bind more strongly than curcumin to PfATP6.

(i) Suggest advantages of using theoretical models in this research, rather than testing possible drugs in the laboratory.

...........................................................................................................................................

........................................................................................................................................... [4]

(ii) Suggest one social advantage and one environmental advantage of growing this Bt maize.

social advantage ...........................................................................................................
...........................................................................................................................................

environmental advantage ...........................................................................................
........................................................................................................................................... [2]

[Total: 13]
Fig. 5.1 shows a water vole, *Arvicola amphibius*. This species is native to Great Britain.

![Image of a water vole](image1.png)

**Fig. 5.1**

The numbers of water voles are estimated to have fallen by 94% in the last century.

This is thought to be due to habitat fragmentation and also to extensive predation by mink, *Neovison vison*, shown in Fig. 5.2. Mink originated in North America but were brought to Great Britain for fur farming. Some escaped or were released into the wild, where their numbers rapidly increased.

![Image of a mink](image2.png)

**Fig. 5.2**

(a) Name **and** describe a method for estimating the abundance of water voles in a local area.

.............................................................................................................................................
.............................................................................................................................................
.............................................................................................................................................
............................................................................................................................................. [3]

(ii) Suggest one way of controlling mink numbers in Great Britain.

.............................................................................................................................................
.............................................................................................................................................
.............................................................................................................................................
.............................................................................................................................................
............................................................................................................................................. [1]

[Total: 10]
The fruit fly, *Drosophila melanogaster*, has eyes, a striped abdomen and wings longer than its abdomen. This is called a ‘wild-type’ fly.

Mutation has resulted in many variations of these features.

Table 6.1 shows diagrams of a wild-type fly and three other flies, each of which shows one recessive mutation.

**Table 6.1**

<table>
<thead>
<tr>
<th>Eyes</th>
<th>Present</th>
<th>Present</th>
<th>Absent</th>
<th>Present</th>
</tr>
</thead>
<tbody>
<tr>
<td>Abdomen</td>
<td>Striped</td>
<td>Black</td>
<td>Striped</td>
<td>Striped</td>
</tr>
<tr>
<td>Wing description</td>
<td>Long</td>
<td>Long</td>
<td>Long</td>
<td>Short</td>
</tr>
</tbody>
</table>

(a) Using appropriate symbols, complete the genetic diagram below.

**Parental phenotypes**

- with eyes
- black abdomen
- striped abdomen

**Parental genotypes**

**Gametes**

**Offspring genotypes**

- with eyes
- no eyes
- with eyes
- no eyes
- with eyes
- no eyes
- with eyes
- no eyes

- black abdomen
- black abdomen
- striped abdomen
- striped abdomen
(b) State how you would carry out a test cross.

...................................................................................................................................................
.............................................................................................................................................. [1]

(c) A cross was carried out between a fly heterozygous for striped abdomen and long wings and a fly with a black abdomen and short wings.

The results are shown below in Table 6.2.

<table>
<thead>
<tr>
<th>offspring</th>
<th>number</th>
</tr>
</thead>
<tbody>
<tr>
<td>striped abdomen</td>
<td>86</td>
</tr>
<tr>
<td>long wing</td>
<td></td>
</tr>
<tr>
<td>black abdomen</td>
<td>87</td>
</tr>
<tr>
<td>long wing</td>
<td></td>
</tr>
<tr>
<td>striped abdomen</td>
<td>81</td>
</tr>
<tr>
<td>short wing</td>
<td></td>
</tr>
<tr>
<td>black abdomen</td>
<td>78</td>
</tr>
<tr>
<td>short wing</td>
<td></td>
</tr>
<tr>
<td>total</td>
<td>332</td>
</tr>
</tbody>
</table>

A chi-squared test ($\chi^2$) was carried out on these data.

Complete Table 6.3 and calculate the value of $\chi^2$.

<table>
<thead>
<tr>
<th>observed number (O)</th>
<th>expected number (E)</th>
<th>$O - E$</th>
<th>$(O - E)^2$</th>
<th>$\frac{(O - E)^2}{E}$</th>
</tr>
</thead>
<tbody>
<tr>
<td>86</td>
<td>....................</td>
<td>..........</td>
<td>................</td>
<td></td>
</tr>
<tr>
<td>87</td>
<td>....................</td>
<td>..........</td>
<td>................</td>
<td></td>
</tr>
<tr>
<td>81</td>
<td>....................</td>
<td>..........</td>
<td>................</td>
<td></td>
</tr>
<tr>
<td>78</td>
<td>....................</td>
<td>..........</td>
<td>................</td>
<td></td>
</tr>
<tr>
<td>332</td>
<td>332</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

$\chi^2 = \Sigma \frac{(O - E)^2}{E}$

$\Sigma = \text{sum of...}$

$\chi^2 .................................................. [3]$
(d) Table 6.4 shows $\chi^2$ values.

**Table 6.4**

<table>
<thead>
<tr>
<th>degrees of freedom</th>
<th>probability</th>
</tr>
</thead>
<tbody>
<tr>
<td>0.50</td>
<td>0.20</td>
</tr>
<tr>
<td>2.37</td>
<td>4.64</td>
</tr>
</tbody>
</table>

Using Table 6.4, explain what conclusions can be made about the results of the $\chi^2$ test.

...................................................................................................................................................
...................................................................................................................................................
[1]

(b) Insulin plays a part in homeostasis. It affects muscle and liver cells to bring about a decrease in blood glucose concentration, particularly after a meal.

(i) Insulin is composed of two polypeptides which are made in $\beta$ cells in the pancreas.

State precisely where in $\beta$ cells polypeptide molecules are synthesised.

...........................................................................................................................................
...........................................................................................................................................
........................................................................................................................................... [3]

(c) During periods of stress or extreme exercise more glucose needs to be released into the blood. The hormone adrenaline is released and binds to receptors on the cell surface membranes of liver cells.

Describe how the effect of adrenaline on liver cells results in an increase in blood glucose concentration.

Section B

Answer one question.

9  (a) Outline how ATP is synthesised by oxidative phosphorylation. [8]
(b) Describe respiration in yeast cells in anaerobic conditions. [7]

[Total: 15]

10 (a) Describe the behaviour of chromosomes during meiosis. [9]
(b) Outline the differences between structural and regulatory genes. [6]
