Paper 4 Data Response and Essays

**May/June 2023**

MARK SCHEME

Maximum Mark: 70

---

**Published**

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge International will not enter into discussions about these mark schemes.

Cambridge International is publishing the mark schemes for the May/June 2023 series for most Cambridge IGCSE, Cambridge International A and AS Level and Cambridge Pre-U components, and some Cambridge O Level components.

---

This document consists of **15** printed pages.

**Generic Marking Principles**

These general marking principles must be applied by all examiners when marking candidate answers. They should be applied alongside the specific content of the mark scheme or generic level descriptors for a question. Each question paper and mark scheme will also comply with these marking principles.

**GENERIC MARKING PRINCIPLE 1:**

Marks must be awarded in line with:

- the specific content of the mark scheme or the generic level descriptors for the question
- the specific skills defined in the mark scheme or in the generic level descriptors for the question
- the standard of response required by a candidate as exemplified by the standardisation scripts.

**GENERIC MARKING PRINCIPLE 2:**

Marks awarded are always **whole marks** (not half marks, or other fractions).

**GENERIC MARKING PRINCIPLE 3:**

Marks must be awarded **positively**:

- marks are awarded for correct/valid answers, as defined in the mark scheme. However, credit is given for valid answers which go beyond the scope of the syllabus and mark scheme, referring to your Team Leader as appropriate
- marks are awarded when candidates clearly demonstrate what they know and can do
- marks are not deducted for errors
- marks are not deducted for omissions
- answers should only be judged on the quality of spelling, punctuation and grammar when these features are specifically assessed by the question as indicated by the mark scheme. The meaning, however, should be unambiguous.

**GENERIC MARKING PRINCIPLE 4:**

Rules must be applied consistently, e.g. in situations where candidates have not followed instructions or in the application of generic level descriptors.

**GENERIC MARKING PRINCIPLE 5:**

Marks should be awarded using the full range of marks defined in the mark scheme for the question (however; the use of the full mark range may be limited according to the quality of the candidate responses seen).

**GENERIC MARKING PRINCIPLE 6:**

Marks awarded are based solely on the requirements as defined in the mark scheme. Marks should not be awarded with grade thresholds or grade descriptors in mind.

**Social Science-Specific Marking Principles  
(for point-based marking)****1 Components using point-based marking:**

- Point marking is often used to reward knowledge, understanding and application of skills. We give credit where the candidate's answer shows relevant knowledge, understanding and application of skills in answering the question. We do not give credit where the answer shows confusion.

From this it follows that we:

- a DO credit answers which are worded differently from the mark scheme if they clearly convey the same meaning (unless the mark scheme requires a specific term)
- b DO credit alternative answers/examples which are not written in the mark scheme if they are correct
- c DO credit answers where candidates give more than one correct answer in one prompt/numbered/scaffolded space where extended writing is required rather than list-type answers. For example, questions that require  $n$  reasons (e.g. State two reasons ...).
- d DO NOT credit answers simply for using a 'key term' unless that is all that is required. (Check for evidence it is understood and not used wrongly.)
- e DO NOT credit answers which are obviously self-contradicting or trying to cover all possibilities
- f DO NOT give further credit for what is effectively repetition of a correct point already credited unless the language itself is being tested. This applies equally to 'mirror statements' (i.e. polluted/not polluted).
- g DO NOT require spellings to be correct, unless this is part of the test. However spellings of syllabus terms must allow for clear and unambiguous separation from other syllabus terms with which they may be confused (e.g. Corrasion/Corrosion)

**2 Presentation of mark scheme:**

- Slashes (/) or the word 'or' separate alternative ways of making the same point.
- Semi colons (;) bullet points (•) or figures in brackets (1) separate different points.
- Content in the answer column in brackets is for examiner information/context to clarify the marking but is not required to earn the mark (except Accounting syllabuses where they indicate negative numbers).

**3 Calculation questions:**

- The mark scheme will show the steps in the most likely correct method(s), the mark for each step, the correct answer(s) and the mark for each answer
- If working/explanation is considered essential for full credit, this will be indicated in the question paper and in the mark scheme. In all other instances, the correct answer to a calculation should be given full credit, even if no supporting working is shown.
- Where the candidate uses a valid method which is not covered by the mark scheme, award equivalent marks for reaching equivalent stages.
- Where an answer makes use of a candidate's own incorrect figure from previous working, the 'own figure rule' applies: full marks will be given if a correct and complete method is used. Further guidance will be included in the mark scheme where necessary and any exceptions to this general principle will be noted.

**4 Annotation:**

- For point marking, ticks can be used to indicate correct answers and crosses can be used to indicate wrong answers. There is no direct relationship between ticks and marks. Ticks have no defined meaning for levels of response marking.
- For levels of response marking, the level awarded should be annotated on the script.
- Other annotations will be used by examiners as agreed during standardisation, and the meaning will be understood by all examiners who marked that paper.

**Assessment objectives****AO1 Knowledge and understanding**

- Show knowledge of syllabus content, recalling facts, formulae and definitions.
- Demonstrate understanding of syllabus content, giving appropriate explanations and examples.
- Apply knowledge and understanding to economic information using written, numerical and diagrammatic forms.

**AO2 Analysis**

- Examine economic issues and relationships, using relevant economic concepts, theories and information.
- Select, interpret and organise economic information in written, numerical and diagrammatic form.
- Use economic information to recognise patterns, relationships, causes and effects.
- Explain the impacts and consequences of changes in economic variables.

**AO3 Evaluation**

- Recognise assumptions and limitations of economic information and models.
- Assess economic information and the strengths and weaknesses of arguments.
- Recognise that some economic decisions involve consideration of factors such as priorities and value judgements.
- Communicate reasoned judgements, conclusions and decisions, based on the arguments.

**Table A: AO1 Knowledge and understanding and AO2 Analysis**

Use this table to give marks for each candidate response for AO1 Knowledge and understanding and AO2 Analysis for **Questions 2, 3, 4 and 5**.

<b>Level</b>	<b>Description</b>	<b>Marks</b>
<b>3</b>	<ul style="list-style-type: none"> <li>A detailed knowledge and understanding of relevant economic concepts is included, using relevant explanations. Explanations are supported by examples, where appropriate.</li> <li>The response clearly addresses the requirements of the question and explains economic issues, and fully develops these explanations.</li> <li>Analysis is developed and detailed and makes accurate and relevant use of economic concepts and theories. Where necessary, there is accurate and relevant use of analytical tools such as diagrams and formulae, and these are fully explained.</li> <li>Responses are well-organised, well-focused and presented in a logical and coherent manner.</li> </ul>	11–14
<b>2</b>	<ul style="list-style-type: none"> <li>Knowledge and understanding of some relevant economic concepts is included, using explanations and examples that are limited, over-generalised or contain inaccuracies.</li> <li>The response addresses the general theme of the question and the relevant economic issues, with limited development.</li> <li>Analysis is generally accurate with some development but little detail. Uses analytical tools such as diagrams and formulae where necessary. Use of these tools is partially accurate or not fully explained.</li> <li>Responses are generally logical and coherent but are sometimes lacking in focus or organisation.</li> </ul>	6–10
<b>1</b>	<ul style="list-style-type: none"> <li>A small number of relevant knowledge points are included and the response is limited by significant errors or omissions.</li> <li>The response has little relevance to the question.</li> <li>Analysis where provided is largely descriptive. Use of analytical tools such as diagrams and formulae, where necessary, may contain significant errors or be omitted completely.</li> <li>Responses show limited organisation of economic ideas.</li> </ul>	1–5
<b>0</b>	No creditable response.	0

**Table B: AO3 Evaluation**

Use this table to give marks for each candidate response for AO3 Evaluation for **Questions 2, 3, 4 and 5**.

<b>Level</b>	<b>Description</b>	<b>Marks</b>
<b>2</b>	<ul style="list-style-type: none"><li>Provides a justified conclusion or judgement that addresses the specific requirements of the question.</li><li>Makes developed, reasoned and well-supported evaluative comment(s).</li></ul>	4–6
<b>1</b>	<ul style="list-style-type: none"><li>Provides a vague or general conclusion or judgement in relation to the question.</li><li>Makes simple evaluative comment(s) with no development and little supporting evidence.</li></ul>	1–3
<b>0</b>	No creditable response.	0

**Section A Data response**

Question	Answer	Marks
Follow the point-based marking guidance at the top of this mark scheme.		
1(a)	<p><b>Explain what is meant by purchasing power parity (PPP).</b></p> <ul style="list-style-type: none"> <li>• A comparison of the cost of a bundle of goods and services bought with the local currency (1) with the cost of the same bundle bought with another currency (1)</li> <li>• For example, a bundle which costs 500 Pakistan Rupees and 2 US\$ would give a PPP of 250R = 1 \$ (1)</li> </ul>	<b>2</b>
1(b)	<p><b>Explain, with the help of a diagram, the likely impact of the BRI on both the potential economic growth and the actual economic growth of Pakistan.</b></p> <ul style="list-style-type: none"> <li>• Actual economic growth will reflect an increase in Pakistan's GDP per year using existing resources.(1)</li> <li>• Potential economic growth is the outwards movement of Pakistan's PPC (1)</li> </ul> <div data-bbox="379 965 1281 1406" style="text-align: center;"> </div> <ul style="list-style-type: none"> <li>• Accurately drawn and labelled graph (1) showing showing/referring to both movement from x to y for actual economic growth and PPC<sub>1</sub> to PPC<sub>2</sub> for potential economic growth (2)</li> </ul> <p><b>Max 3</b> if diagram is not accurately drawn <b>and</b> labelled.</p>	<b>4</b>

Question	Answer	Marks
1(c)	<p><b>Consider, with reference to Table 1.1, the change in the standard of living in Pakistan and China between 2014 and 2018.</b></p> <ul style="list-style-type: none"> <li>• What is meant by the standard of living (SoL) (1)</li> <li>• Split material and non-material SoL (1)</li> <li>• GDP pc has risen for China 28% (1) and Pakistan 14% (1)</li> <li>• Unemployment has fallen for countries for China (1) and Pakistan (1)</li> <li>• Gini Coefficient has fallen in China (1) and risen in Pakistan (1)</li> </ul> <p><b>Max 3 marks for simple statements</b></p> <ul style="list-style-type: none"> <li>• Link Material SoL to GDP pc both better off (1)</li> <li>• Change in Gini coefficient means the increase in income has become more evenly spread in China and less evenly spread in Pakistan. (1)</li> <li>• Material SoL is likely to have increased in China and may have fallen in Pakistan (1)</li> <li>• Rising employment is linked to rising SoL (1)</li> <li>• No data on non-material aspects of SoL such as pollution or working hours (1)</li> </ul> <p><b>Max 3 marks for further developments</b></p>	<b>6</b>

Question	Answer	Marks
1(d)	<p><b>Evaluate, using the article, the likely impact of the BRI on the economies of Pakistan and China in the long run.</b></p> <p><b>Advantages</b></p> <p><b>China</b></p> <ul style="list-style-type: none"> <li>• More exports of capital equipment rail equipment, cement and steel.</li> <li>• Cheaper export routes to middle eastern and western market allowing development of western Chinese provinces.</li> <li>• Use of excess Chinese capacity lowering Chinese cost of production at home boosting profits.</li> <li>• Market for Chinese bank loans.</li> </ul> <p><b>Pakistan</b></p> <ul style="list-style-type: none"> <li>• Inwards investment on railways/Gwadar port/industrial zones.</li> <li>• Boost AD and AS leadings to higher non-inflationary GDP</li> <li>• Investment in reliable electricity supply with benefits for industry, and improve consumer standard of living domestic comfort and human capital through better education.</li> </ul> <p><b>Disadvantages</b></p> <ul style="list-style-type: none"> <li>• Power stations are coal/nuclear energy technology considered polluting. The former contributing to global warming.</li> <li>• Debts for Pakistan to repay.</li> <li>• Initial employment benefits for Pakistan unclear if construction uses Chinese labour.</li> <li>• No clear indication of profitability to Pakistan</li> <li>• Ability of Pakistan to repay the loans. Currently approximately 25% of GDP.</li> <li>• Pakistan may default on repayment of loans to China.</li> <li>• <b>Judgement:</b> Based on the evidence provided. <b>(1)</b></li> </ul> <p><b>Guidance:</b>  <b>MAX 5 marks for advantages. Both China and Pakistan must be considered.</b>  <b>Max 5 Marks for disadvantages.</b>  <b>Max 5 Marks if only one country considered.</b>  <b>Max 7 marks for 2 sided answers.</b>  <b>Judgement of the impact of BRI on Pakistan and China 1 mark.</b></p>	8

Question	Answer	Marks
<b>EITHER</b>		
2	<p><b>The increased use of electric vehicles (EVs) is encouraged as part of governments' climate change policies because they create fewer negative externalities than diesel and petrol (gas) vehicles.</b></p> <p><b>Evaluate, with the help of diagrams, two policies that a government may use to encourage the use of EVs.</b></p> <p>Use Table A: AO1 Knowledge and understanding and AO2 Analysis and Table B: AO3 Evaluation to mark candidate responses to this question.</p> <p>AO1 and AO2 out of 14 marks. AO3 out of 6 marks.</p> <p><b>Indicative content</b></p> <p>Responses may include:</p> <p><b>AO1 Knowledge and understanding and AO2 Analysis</b></p> <ul style="list-style-type: none"> <li>• Market failure regarding this question would relate to allocative inefficiency. Market failure can be explained by defining allocative efficiency and linking this to the requirement to allocate resources to maximise consumer satisfaction. This can be supported by a diagram illustrating a level of output where <math>AR = MC</math> or <math>MSB = MSC</math> which is consistent with an outcome that achieves allocative efficiency.</li> <li>• Negative externalities occur when the when the consumption/use of a good produces a cost to society which is greater than that received by an individual producer <math>MPB &gt; MSB</math> or <math>MSC &gt; MPC</math>. This is sometimes described as a negative 'spill-over' effect. The negative externality leads to an over production of the good.</li> <li>• Government intervention takes place to address the failure of market forces to allocate resources efficiently. In this case positive externalities would lead to under-consumption of a good or service.</li> <li>• Different types of government intervention can be used to correct the under-production of output to enable consumer satisfaction to be maximised.</li> <li>• Forms of government intervention might include: the use of subsidies for consumers to increase consumption and also producers to change production methods, use of positive advertising; the direct provision of goods and services such as alternative transport methods. Indirect taxation. Nudge theory effects.</li> <li>• A clearly labelled, accurate diagram can be used to show the impact of a positive/negative externality on the level of output and the welfare change will be identified.</li> <li>• The diagram could show the market equilibrium point which does not take into account the existence of a negative consumption externality and may compare this with the allocatively efficient level of output when the negative externality is taken into account. The diagram may be amended or re-drawn to show the impact of a chosen policy(ies) and the impact on consumption or production shown.</li> <li>• Reference to the diagram and the outcomes it illustrates is made in the text.</li> </ul>	20

Question	Answer	Marks
2	<p><b>AO3 Evaluation</b></p> <ul style="list-style-type: none"> <li>• A government might introduce a subsidy to encourage producers to increase output to enable allocative efficiency, however it is difficult to measure the precise value of the subsidy. Subsidies are costly in that the funds might have been used by governments for other purposes. This means governments will have to make a value judgement when deciding whether to provide a subsidy.</li> <li>• Also, the impact on price and output in some circumstances takes a long time to become effective.</li> <li>• Advertising is often costly and it is not always certain that it will have a sufficiently persuasive effect to ensure the correct level of output/ consumption is reached.</li> <li>• Direct provision is also costly and sometimes less efficient than that provided through market forces.</li> <li>• It is possible to show that government intervention can reduce the level of inefficiency caused by the existence of positive externalities but it is not clear whether the net effect of government intervention will always be positive. Some types of intervention will be more effective than others depending on the nature of the good/service under consideration.</li> </ul> <p>Accept all valid responses.</p>	
	AO1 Knowledge and understanding and AO2 Analysis	14
	AO3 Evaluation	6

Question	Answer	Marks
<b>OR</b>		
3	<p><b>Evaluate, with the help of a diagram(s) how total market demand and minimum efficient scale may determine the form of market structure in an industry.</b></p> <p>Use Table A: AO1 Knowledge and understanding and AO2 Analysis and Table B: AO3 Evaluation to mark candidate responses to this question.</p> <p>AO1 and AO2 out of 14 marks. AO3 out of 6 marks.</p> <p><b>Indicative content</b></p> <p>Responses may include:</p> <p><b>AO1 Knowledge and understanding and AO2 Analysis</b></p> <ul style="list-style-type: none"> <li>• The concepts of increasing/constant/decreasing returns to scale and the minimum efficient scale (MES) of production the level of output where LRAC are initially minimized.</li> <li>• The explanation of a number of examples of economies of scale: division of labour, financial, marketing, managerial technical and their impact on the long run average cost curve (LRAC).</li> <li>• An analysis of the relationship between total demand for a product and the minimum efficient scale effectively total demand divided by MES to give the maximum number of firms who could operate at the MES.</li> <li>• A description of different forms of market structure eg perfect competition, monopolistic competition, oligopoly or monopoly.</li> <li>• An analysis of the relationship between the MES and the market demand determining the number of firms many/a few/one equivalent to perfect competition, monopolistic competition, oligopoly or monopoly.</li> <li>• Examples MES and market demand. MES = 50% therefore in theory 2 firms – a duopoly MES 2% therefore 50 firms perfect/monopolistic competition.</li> <li>• Relevant diagram for economies of scale with indication of MES and demand curve.</li> </ul> <p><b>AO3 Evaluation</b></p> <ul style="list-style-type: none"> <li>• MES is not static and may change over time eg technological change.</li> <li>• The definition of the market will affect the calculation of the relationship. The village shop which operates at a small scale is appropriate for the village market.</li> <li>• Markets will still exist where particular firms produce small scale high-cost items e.g. luxury cars or designer clothes to satisfy a niche portion of a bigger market.</li> </ul> <p>Accept all valid responses</p>	20
