**MATHEMATICS**

**9709/61**

Paper 6 Probability & Statistics 2

**October/November 2020**

**1 hour 15 minutes**

You must answer on the question paper.

You will need: List of formulae (MF19)

### INSTRUCTIONS

- Answer **all** questions.
- Use a black or dark blue pen. You may use an HB pencil for any diagrams or graphs.
- Write your name, centre number and candidate number in the boxes at the top of the page.
- Write your answer to each question in the space provided.
- Do **not** use an erasable pen or correction fluid.
- Do **not** write on any bar codes.
- If additional space is needed, you should use the lined page at the end of this booklet; the question number or numbers must be clearly shown.
- You should use a calculator where appropriate.
- You must show all necessary working clearly; no marks will be given for unsupported answers from a calculator.
- Give non-exact numerical answers correct to 3 significant figures, or 1 decimal place for angles in degrees, unless a different level of accuracy is specified in the question.

### INFORMATION

- The total mark for this paper is 50.
- The number of marks for each question or part question is shown in brackets [ ].

This document has **12** pages. Blank pages are indicated.

**BLANK PAGE**

1 It is known that, on average, 1 in 300 flowers of a certain kind are white. A random sample of 200 flowers of this kind is selected.

(a) Use an appropriate approximating distribution to find the probability that more than 1 flower in the sample is white. [3]

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

(b) Justify the approximating distribution used in part (a). [1]

.....

.....

.....

The probability that a randomly chosen flower of another kind is white is 0.02. A random sample of 150 of these flowers is selected.

(c) Use an appropriate approximating distribution to find the probability that the total number of white flowers in the two samples is less than 4. [3]

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

- (b) The survey included a question about the amount,  $x$  dollars, spent on travel per year. The results are summarised as follows.

$$n = 250 \quad \Sigma x = 50\,460 \quad \Sigma x^2 = 19\,854\,200$$

Find unbiased estimates of the population mean and variance of the amount spent per year on travel. [3]

A councillor wanted to select a random sample of houses in Fromleigh. He planned to select the first house on each of the 143 streets in Fromleigh.

- (c) Explain why this would not provide a random sample. [1]

5 The number of absences per week by workers at a factory has the distribution  $Po(2.1)$ .

(a) Find the standard deviation of the number of absences per week. [1]

.....  
.....  
.....

(b) Find the probability that the number of absences in a 2-week period is at least 2. [3]
