CANDIDATE NUMBER

DESIGN & TECHNOLOGY **0445/42**

Paper 4 Systems & Control **October/November 2024**

1 hour

You must answer on the question paper.

No additional materials are needed.

INSTRUCTIONS

- Section A: answer **all** questions.
- Section B: answer **one** question.
- Use a black or dark blue pen. You may use an HB pencil for any diagrams or graphs.
- Write your name, centre number and candidate number in the boxes at the top of the page.
- Answer in the space provided.
- Do **not** use an erasable pen or correction fluid.
- Do **not** write on any bar codes.
- You may use a calculator.

INFORMATION

- The total mark for this paper is 50.
- The number of marks for each question or part question is shown in brackets [ ].
- All dimensions are in millimetres unless otherwise stated.

This document has **20** pages. Any blank pages are indicated.

[Turn over

Section A

Answer **all** questions in this section.

1   Fig. 1.1 shows a wooden door frame ready to be placed in a building.

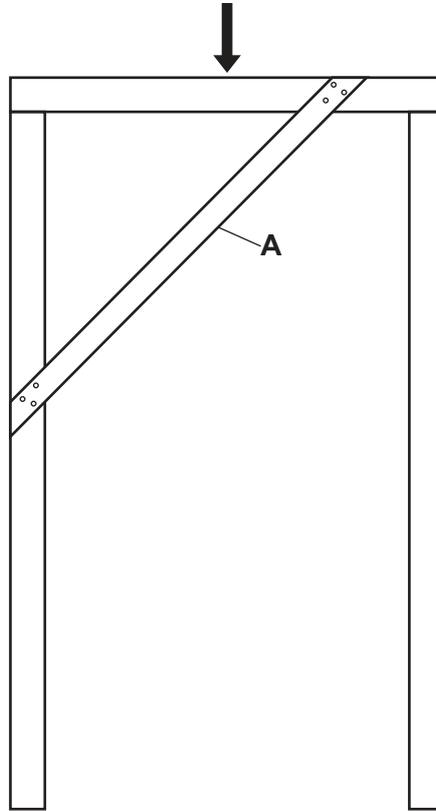

Fig. 1.1

(a) Use words from the list to complete the description of the wooden door frame.

nails   glue   triangulation   flexible   rigid

Joints at each end of part **A** are temporary. They are made using ....

Part **A** uses .... to ensure that the wooden door frame is

....   [3]

(b) Name the force indicated by the arrow that will act on the wooden door frame when the building is complete.

.... [1]

2 Composite materials can be used in the construction of beams.

(a) Give **one** example of a composite material.

.... [1]

(b) State **two** benefits of using composite materials.

1 ....

2 ....
[2]

3 Give **two** reasons why products that can be disassembled are good for the environment.

1 ....

2 ....
[2]

4 Fig. 4.1 shows a car handbrake lever.
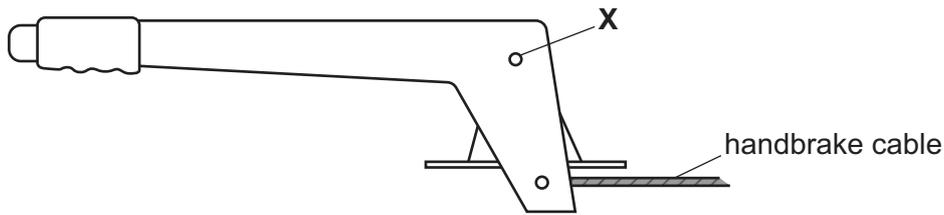

Fig. 4.1

(a) Describe how friction in the pivot at point **X** can be reduced.

....

....

.... [2]

(b) State why the handbrake lever is described as a first class lever.

.... [1]

(c) The handbrake lever converts oscillating motion to reciprocating motion.
Name the **two** other types of motion.

1 ....

2 ....
[2]

5 Give **two** reasons for choosing spur gears to drive a mechanism.

1 ....

2 ....

[2]

6 Fig. 6.1 shows two spur gears.

drive gear **A**
driven gear **B**
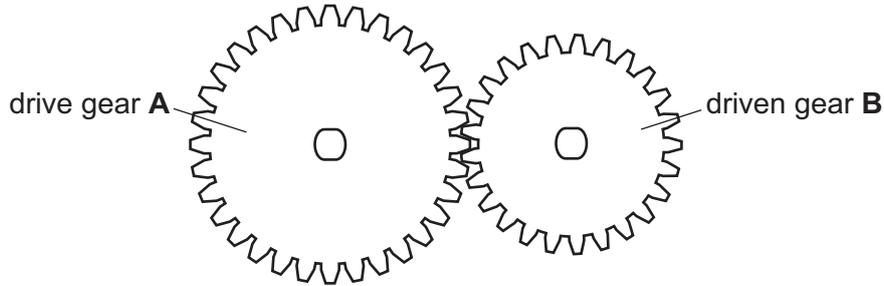

Fig. 6.1

State **two** effects of using the spur gears shown in Fig. 6.1.

1 ....

2 ....

[2]

7 Fig. 7.1 gives examples of electronic components and symbols.
Draw lines to connect the component name to the correct symbol.
One has been done for you.

capacitor

variable resistor

fuse

diode

NTC thermistor

battery

Fig. 7.1 [4]

8 A microswitch has three terminals marked C, NC and NO.
State the meaning of these letters.

C ....

NC ....

NO ....
[3]

Section B

Answer **one** question from this section.

9 Fig. 9.1 shows a building with scaffolding in position.

Fig. 9.1

(a) (i) Give **one** example of each type of manufactured structure that is visible in Fig. 9.1.

Frame structure ....

Mass Structure ....

Shell structure ....

[3]

   (ii) Describe how movement in the scaffolding has been prevented.

....

....

.... [2]

   (iii) Give **one** reason for using the wooden boards marked **A**.

.... [1]

   (iv) Describe **two** safety features that can be seen in the construction of the scaffolding.

    1 ....

    2 ....

.... [2]

(b) Fig. 9.2 shows a road bridge with a concrete beam supported by columns.
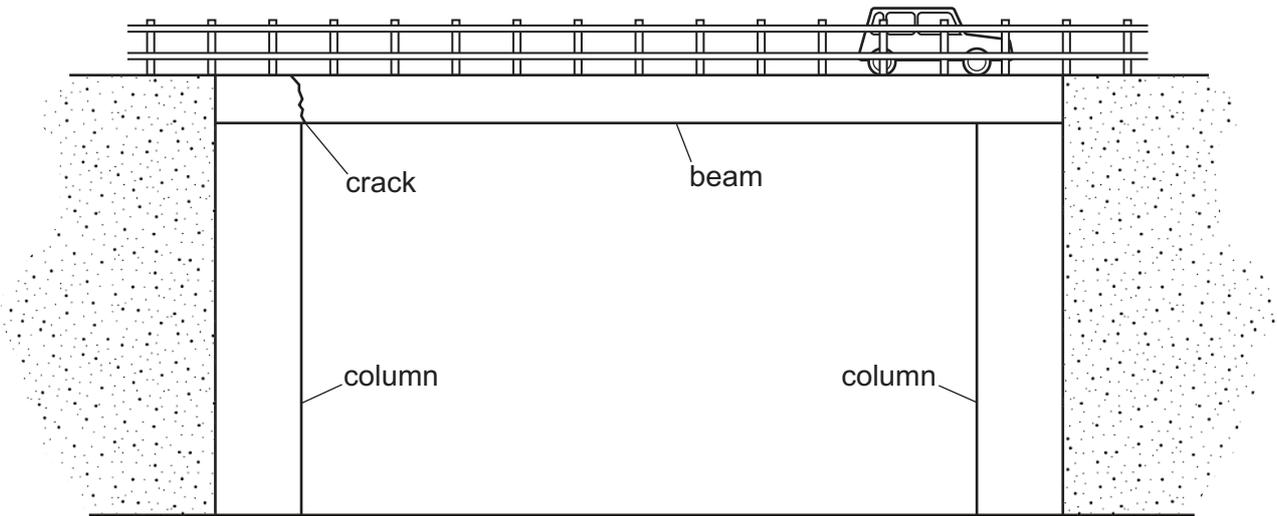

Fig. 9.2

   (i) State the force that is the likely cause of the cracking on the concrete beam.

.... [1]

   (ii) Add arrows to Fig. 9.2 to show the force acting on the beam. [1]

(iii) Explain how small cracks in structural concrete can cause more serious damage over several years.

....

....

....

.... [3]

(iv) Fig. 9.3 shows two beams used to span a gap with a central support.
Each beam weighs 200 kg. The load from the beams is equally divided between the supports.
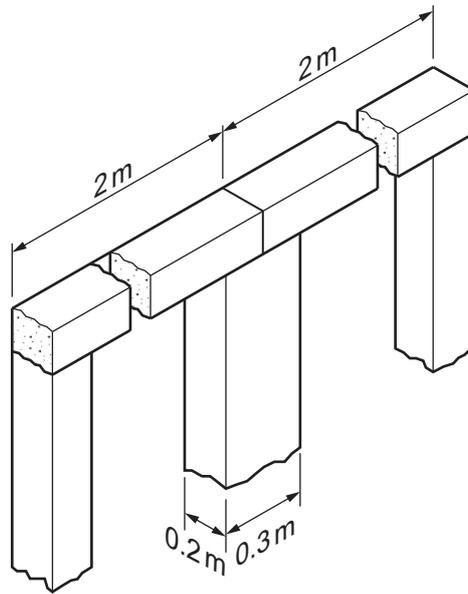

Fig. 9.3

Calculate the stress in the central support.
1 kg = 9.81 N

Use the formula   stress = $\dfrac{\text{force}}{\text{cross sectional area}}$

Include the correct units in your answer.

....

....

....

.... [4]

(c) Use sketches and notes to show the following structures:

(i) A shelf supported at each end by struts.

[2]

(ii) A shelf supported at each end by ties.

[2]

0445/42/O/N/24 **[Turn over**

**(iii)** Fig. 9.4 shows a softwood shelf with a bend along its length caused by excessive load in the centre.

Fig. 9.4

Use sketches and notes to show a method of supporting the shelf to remove the bend. Include details of how any extra materials used are fixed in place.

[4]

10 (a) Fig. 10.1 shows a mechanism used to raise or lower a gate on a waterway.

Fig. 10.1

(i) State the names of parts **X** and **Y** that are used in the mechanism.

X ....

Y ....
[2]

(ii) Describe how the mechanism in Fig. 10.1 controls rotation of the shaft.

....

....

....

.... [3]

(iii)   Fig. 10.2 shows a cranked handle that can be fitted to the square taper on the end of the shaft allowing the shaft to be turned.

tapered square hole

Fig. 10.2

Give **one** benefit of using this method of fitting the handle.

....

.... [1]

(iv)   Explain what is meant by mechanical advantage in a mechanism.

....

....

....

.... [2]

(v)   Use sketches and notes to show how the mechanical advantage and efficiency of the cranked handle in Fig. 10.2 could be increased.

[3]

**(b)** Fig. 10.3 shows a small circular saw and the method used to mount the motor.

motor

4 slots for
mounting motor

4 threaded bolt holes

Fig. 10.3

(i) Give **two** reasons for using four slots to mount the motor.

1 ....

....

2 ....

....

[2]

(ii) Use sketches and notes to show how the vee belt used to drive the circular saw can be tensioned.

[2]

(iii) Fig. 10.4 shows the belt and pulley arrangement between the motor and the saw blade.

cover on
lubrication hole

motor pulley Ø64

saw blade pulley Ø46
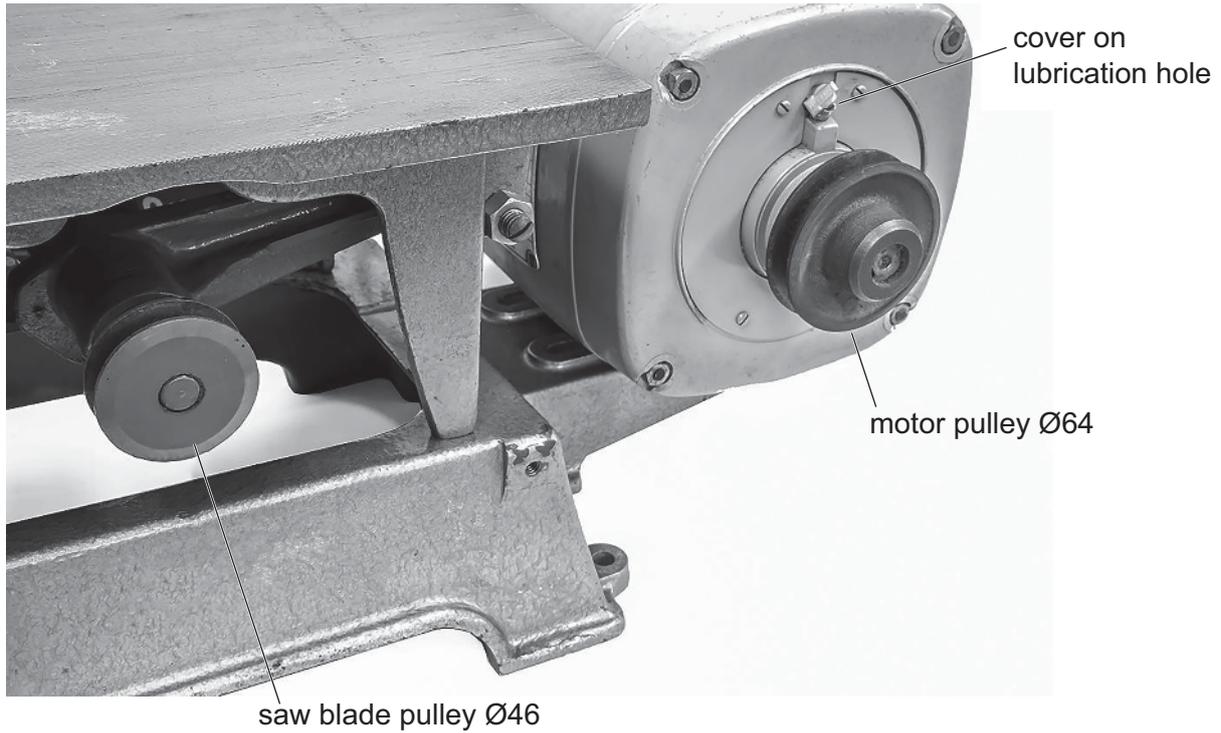

Fig. 10.4

The motor has a rotational speed of 2850 rpm when not under load.
Calculate the rotational speed of the saw blade when the motor is switched on.

....

....

....

.... [3]

(iv) Explain why the actual rotational speed in use may be less than the calculated speed.

....

....

.... [2]

(v) Give **one** reason for having covers over the lubrication holes at each end of the motor.

....

.... [1]

(c) (i) State what is meant by a plain bearing.

....

.... [1]

(ii) Fig. 10.5 shows a tapered roller bearing with a section showing a wheel hub and axle that uses tapered roller bearings.

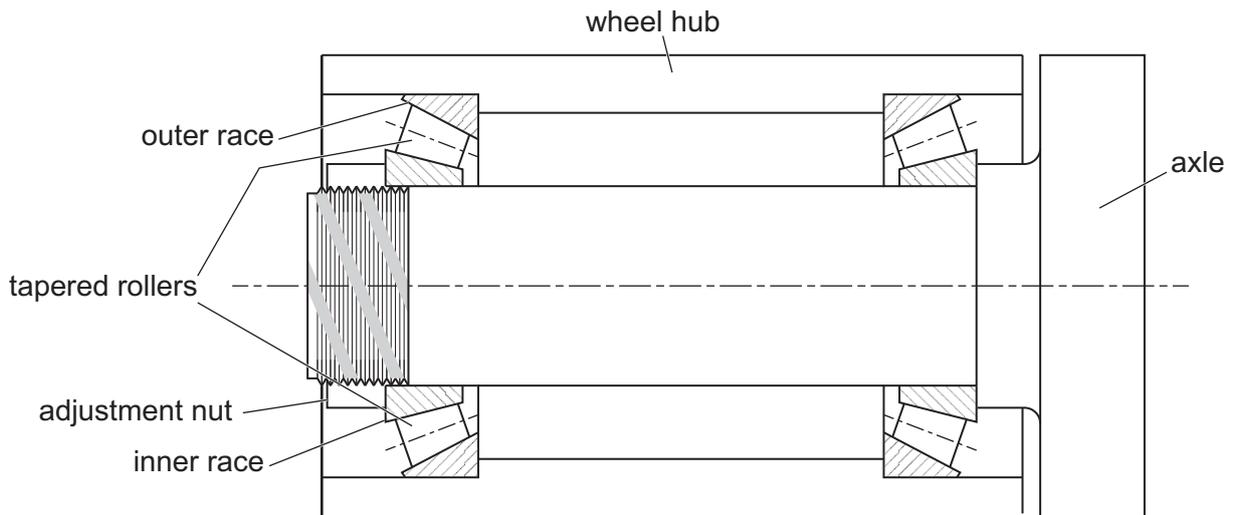

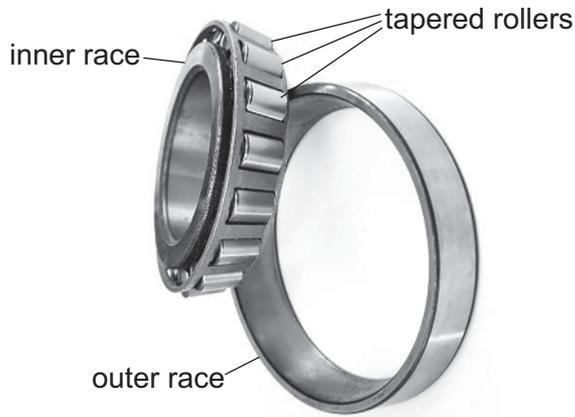

Fig. 10.5

Explain why tapered roller bearings are used in pairs with the tapered ends of the rollers facing each other on the axle.

....

....

....

.... [3]

11 Fig. 11.1 shows two possible designs for a printed circuit board (PCB) to be made using the photoetch process.
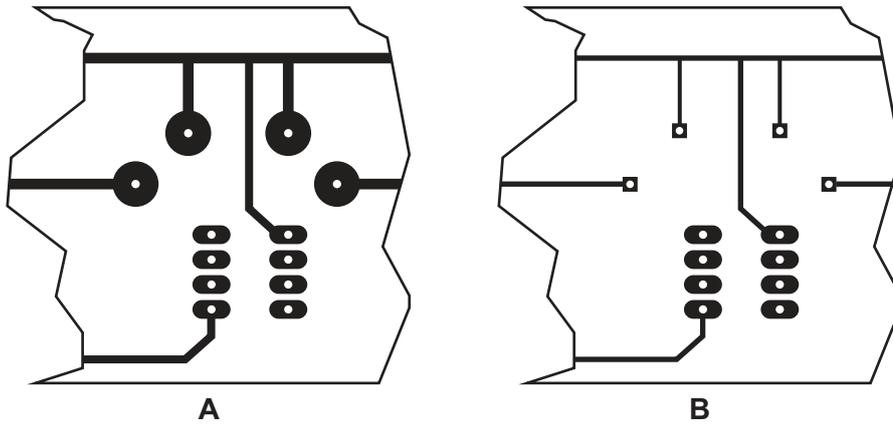

Fig. 11.1

(a) (i) Give one reason why design **A** is better than design **B**.

.... [1]

(ii) State **one** hazard and **one** health and safety measure that should be in place when using the photoetch process to construct a PCB.

Hazard ....

....

Health and safety measure ....

....
[2]

(b) Fig. 11.2 shows two signals from a 555 timer IC circuit.
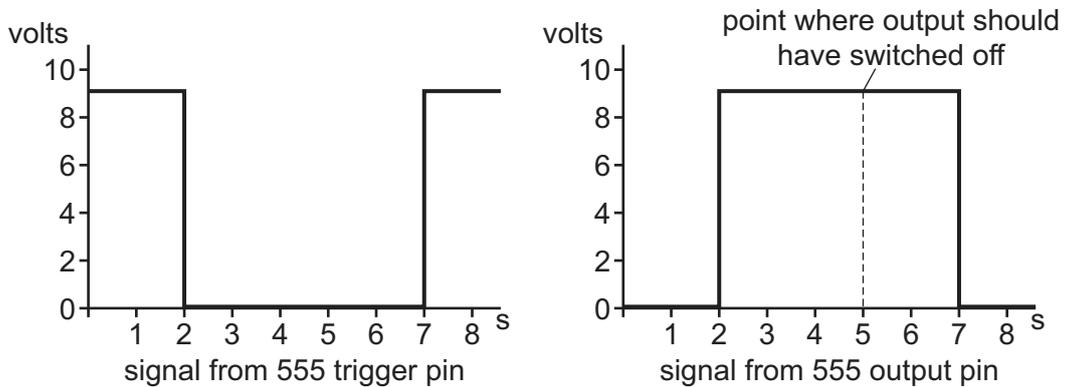

Fig. 11.2

(i) From the list below circle the type of circuit that will produce the signal from the 555 output pin in Fig. 11.2.

astable   bistable   amplifier   monostable   switch   [1]

0445/42/O/N/24

(ii) Describe the signal from the 555 trigger pin shown in Fig. 11.2.

....

....

.... [2]

(iii) The output signal is designed to be 3 seconds long.
Calculate the resistor value that is required to produce a 3 second time delay if a 100 μF capacitor is used in the circuit.

Use the formula   t = 1.1 R C

....

....

....

.... [3]

(iv) Explain why the output pulse in Fig. 11.2 has continued beyond the point where it should have switched off.

....

....

.... [2]

(v) When building a test circuit the 100 μF capacitor is not available and is replaced by two 47 μF capacitors connected in parallel to give a value of 94 μF.
Draw the circuit symbols to show two electrolytic capacitors connected in parallel.

[2]

(vi) Explain why the difference between 94 μF and 100 μF is not important.

....

....

....

.... [2]

(c) Fig. 11.3 shows a block diagram of a heating system and the truth table for the system. For the heater to switch on, the clock must be at logic 1 and the thermostat at logic 0.

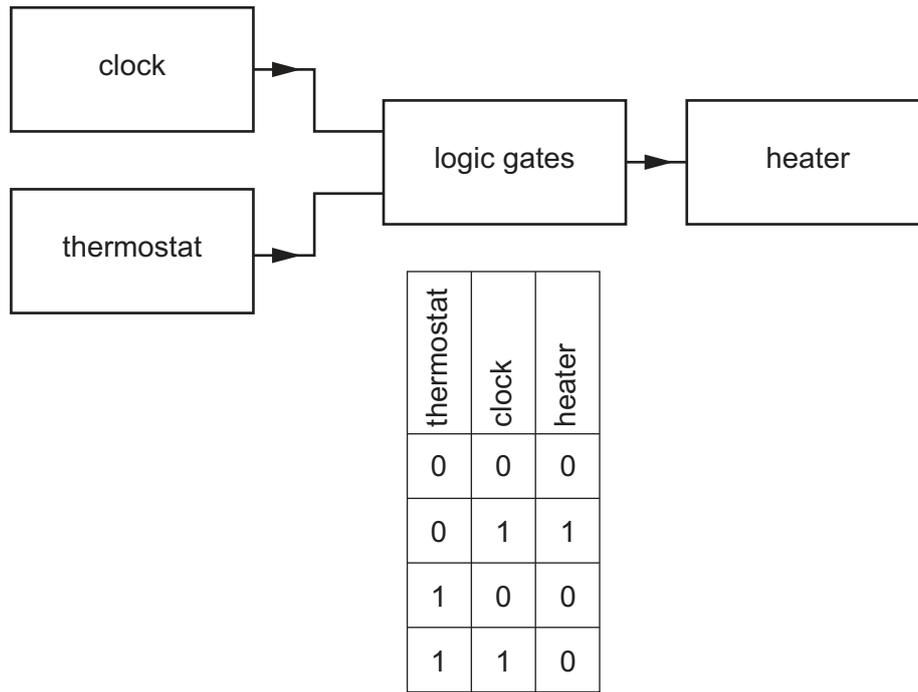

thermostat	clock	heater
0	0	0
0	1	1
1	0	0
1	1	0

Fig. 11.3

(i) Use logic gate symbols to show how the circuit could be constructed using only NAND gates.

[3]

(ii) State why NAND gates and NOR gates are known as universal gates.

....

.... [1]

(iii) Fig. 11.4 shows the outline of a 14 pin IC.
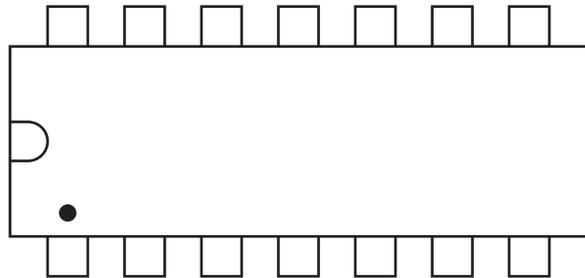

Fig. 11.4

Add pin numbers to pins 5 and 10. [2]

(iv) Fig. 11.5 shows an incomplete circuit diagram of the signal from the logic system and a relay that is used to switch on the heater.
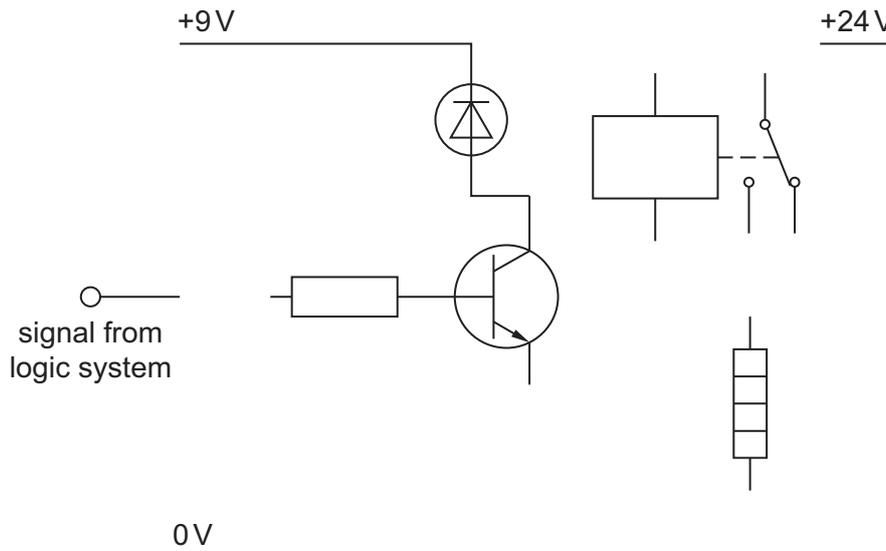

Fig. 11.5

Complete Fig. 11.5 to show connections for the:

- signal from the logic system to the transistor
- transistor emitter to 0 V
- relay coil
- relay outputs and the heater.
