1. Complete the following sentences, using the most appropriate items from the list below.

A microphone  An ADC  A compiler  An interpreter  A microphone
A monitor  A numeric keypad  A speaker  A switch  A USB

(a) ................................................ is a device used to input a PIN.  [1]
(b) ................................................ analyses and executes a program line by line.  [1]
(c) ................................................ produces output in the form of solid objects.  [1]
(d) ................................................ produces output in the form of sound.  [1]

2. Tick whether the following are examples of Magnetic tape, Blu-ray or DVD RAM.

<table>
<thead>
<tr>
<th>Magnetic tape (✓)</th>
<th>Blu-ray (✓)</th>
<th>DVD RAM (✓)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Does not require a laser to read the data.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Uses serial access only.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Used to store and play HD movies.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Can store and read data at the same time.</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

[4]

3. A media company with branches around the world has recently opened a new branch in London. The branch includes a number of different computer networks. Identify the most appropriate type of network to answer each of the questions.

(a) The type of network used to connect the branch to its head office in New York is called a

...........................................................................................................................................  [1]

(b) The type of cabled network used to connect computers together in one of the offices is called a

...........................................................................................................................................  [1]

4. Circle the names of three devices which are used for input.

CD writer  Laser printer  Pen drive  Mouse
Speaker  Touch screen  Remote control  Wide format printer

[3]
A geyser is a hot spring in which water occasionally boils, sending a tall column of water and steam into the air. A temperature sensor is used to monitor the temperature near the geyser. The data from the sensor is sent to a microprocessor.

(a) Explain why the data from the sensor has to be changed before it is read by the microprocessor.

(b) Describe five advantages of using sensors and microprocessors to monitor the temperature in geysers rather than using manual methods.
Tick whether the following refer to **moderated** or **un-moderated** forums

<table>
<thead>
<tr>
<th></th>
<th>moderated</th>
<th>un-moderated</th>
</tr>
</thead>
<tbody>
<tr>
<td>All posts are held in a queue.</td>
<td>✓</td>
<td></td>
</tr>
<tr>
<td>Posts are not policed.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>This forum reduces the chance of offensive messages.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>This forum stops several postings of the same topic.</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
A student is producing a website for his history course. He has produced the following CSS. However, he has made some mistakes in the coding.

```css
h1 {color: #ff0000;
   font-family: "Times New Roman", Times, serif
   font-size: 30pt;
   text-weight: bold;
   text-align: centre;}

h2 {color: #000000;
   font-family: Courier, Times, serif;
   font-size: 14pt;
   text-decoration: underlined;
   text-align: justify;}

body {background-color: #ad88e6;}

table {border-color: #000000;
   border-style: dot;
   border-width: 3px;}

tbody {background-color: #c6dde8;}

Write down six mistakes that have been made in the CSS and for each, give the correction. Your answers should be different in each case.

1 ...............................................................................................................................................
2 ...............................................................................................................................................
3 ...............................................................................................................................................
4 ...............................................................................................................................................
5 ...............................................................................................................................................
6 .............................................................................................................................................
A large organisation is introducing a new computer system.

Compare and contrast pilot implementation with phased implementation of the new system.
A farmer has purchased a computerised milking system for her cows. She has asked a systems analyst to create a database to store details of the cows being milked.

Examples of the details of the cows which will be stored are:

<table>
<thead>
<tr>
<th>Breed_of_cow</th>
<th>Date_of_birth</th>
<th>Weight_of_cow</th>
<th>Average_milk_yield</th>
<th>Animal_passport_number</th>
</tr>
</thead>
<tbody>
<tr>
<td>Holstein</td>
<td>25/02/2017</td>
<td>725.9</td>
<td>24.5</td>
<td>998/2017</td>
</tr>
<tr>
<td>Ayrshire</td>
<td>15/03/2016</td>
<td>715.0</td>
<td>20.1</td>
<td>972/2016</td>
</tr>
<tr>
<td>Jersey</td>
<td>25/02/2017</td>
<td>732.7</td>
<td>25.0</td>
<td>971/2016</td>
</tr>
<tr>
<td>Holstein</td>
<td>10/10/2016</td>
<td>715.0</td>
<td>25.0</td>
<td>765/2016</td>
</tr>
</tbody>
</table>

(a) Complete the following table by entering the most appropriate data type for each field.

For any numeric field, specify the type of number.

<table>
<thead>
<tr>
<th>Field name</th>
<th>Data type</th>
</tr>
</thead>
<tbody>
<tr>
<td>Breed_of_cow</td>
<td></td>
</tr>
<tr>
<td>Date_of_birth</td>
<td></td>
</tr>
<tr>
<td>Weight_of_cow</td>
<td></td>
</tr>
<tr>
<td>Average_milk_yield</td>
<td></td>
</tr>
<tr>
<td>Animal_passport_number</td>
<td></td>
</tr>
</tbody>
</table>

(b) State which field would be the most appropriate for the primary key.

........................................................................................................................................... [1]

(c) A validation check is used when entering the animal passport number into the database.

Name and describe the most appropriate validation check that could be applied to this field.

........................................................................................................................................... [2]
(d) The amount of milk each cow produces is currently recorded daily in a spreadsheet.

This is part of the spreadsheet.

<table>
<thead>
<tr>
<th>A</th>
<th>B</th>
<th>C</th>
<th>D</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Daily Milk Yield</td>
<td></td>
<td></td>
</tr>
<tr>
<td>2</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>3</td>
<td>Animal Passport Number</td>
<td>971/2016</td>
<td></td>
</tr>
<tr>
<td>4</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>5</td>
<td>Date of milking</td>
<td>Amount produced</td>
<td></td>
</tr>
<tr>
<td>6</td>
<td></td>
<td>Litres</td>
<td></td>
</tr>
<tr>
<td>7</td>
<td>26/04/2018</td>
<td>24.5</td>
<td></td>
</tr>
<tr>
<td>8</td>
<td>27/04/2018</td>
<td>23.2</td>
<td></td>
</tr>
<tr>
<td>9</td>
<td>28/04/2018</td>
<td>22.1</td>
<td></td>
</tr>
<tr>
<td>10</td>
<td>29/04/2018</td>
<td>25.1</td>
<td></td>
</tr>
<tr>
<td>11</td>
<td>30/04/2018</td>
<td>24.9</td>
<td></td>
</tr>
<tr>
<td>12</td>
<td>01/05/2018</td>
<td>24.7</td>
<td></td>
</tr>
<tr>
<td>13</td>
<td>02/05/2018</td>
<td>24.6</td>
<td></td>
</tr>
<tr>
<td>14</td>
<td>03/05/2018</td>
<td>23.9</td>
<td></td>
</tr>
<tr>
<td>15</td>
<td>04/05/2018</td>
<td>23.9</td>
<td></td>
</tr>
<tr>
<td>16</td>
<td>05/05/2018</td>
<td>23.8</td>
<td></td>
</tr>
</tbody>
</table>

You have been asked to produce a graph or chart to show the amounts of milk for the cow with Animal Passport Number 971/2016.

Describe the steps you would use to produce a graph or chart of this data as a separate sheet. Include in your answer the name of the new sheet.
Carlos is designing a new computer system to replace an existing system.

(a) Tick four items which will need to be designed.

<table>
<thead>
<tr>
<th>Item</th>
<th>Tick (✓)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Inputs to the current system.</td>
<td></td>
</tr>
<tr>
<td>Data capture forms.</td>
<td></td>
</tr>
<tr>
<td>Report layouts.</td>
<td></td>
</tr>
<tr>
<td>Limitations of the system.</td>
<td></td>
</tr>
<tr>
<td>Observation methods.</td>
<td></td>
</tr>
<tr>
<td>Improvements to the system.</td>
<td></td>
</tr>
<tr>
<td>User and information requirements.</td>
<td></td>
</tr>
<tr>
<td>Validation routines.</td>
<td></td>
</tr>
<tr>
<td>Problems with the current system.</td>
<td></td>
</tr>
<tr>
<td>File structure.</td>
<td></td>
</tr>
</tbody>
</table>

(b) Before the system is implemented it needs to be tested. Different types of test data are used to test the system. An example of test data is live data.

Describe what is meant by live data.

...........................................................................................................................................
...........................................................................................................................................
...........................................................................................................................................
...........................................................................................................................................
........................................................................................................................................... [2]

(c) Following the implementation of the system, technical documentation needs to be written.

Identify three components of technical documentation which are not found in user documentation.

1 ........................................................................................................................................
2 ........................................................................................................................................
3 ........................................................................................................................................ [3]
11 Expert systems are used by doctors.

(a) Describe how an expert system can be used to diagnose illnesses.

(b) Name two other applications of expert systems.

12 A motor car company has some designers based in London and some in Beijing. The cost of travel between the two cities is very high, so when they wish to meet to discuss new products they use video-conferencing.

(a) The designers all have PCs with a keyboard and a mouse in order to take part in video-conferencing.

Name three other devices used to input or output data which would be needed to take part in the video-conference.

© UCLES 2018
(b) Describe three potential problems of the designers using video-conferencing systems rather than meeting in either London or Beijing.

1 ........................................................................................................................................
   ........................................................................................................................................
2 ........................................................................................................................................
   ........................................................................................................................................
3 ........................................................................................................................................
   ........................................................................................................................................

(c) Documents that are sent between the two cities are encrypted.

   Explain what encryption is and why it is used.
   ........................................................................................................................................
   ........................................................................................................................................
   ........................................................................................................................................
   ........................................................................................................................................
   ........................................................................................................................................
   ........................................................................................................................................

[3]
Using computers can lead to a number of physical safety issues.

Describe four of these types of issue.

1. 

2. 

3. 

4. 

[4]
14 Many computer systems use virtual reality.

(a) Explain what is meant by virtual reality.

...........................................................................................................................................
...........................................................................................................................................
...........................................................................................................................................
........................................................................................................................................... [2]

(b) Name two pieces of hardware used in virtual reality systems.

1.........................................................................................................................................
2.........................................................................................................................................

...........................................................................................................................................
...........................................................................................................................................
...........................................................................................................................................
........................................................................................................................................... [2]

15 A new electronic cricket scoreboard is being tested. It stores the number of runs scored by each player during a cricket match. The designer of the scoreboard assumes that no player will score more than 400 runs.

Describe each type of test data shown below giving an appropriate example.

(a) Normal

...........................................................................................................................................
...........................................................................................................................................
...........................................................................................................................................
........................................................................................................................................... [2]

(b) Abnormal

...........................................................................................................................................
...........................................................................................................................................
...........................................................................................................................................
........................................................................................................................................... [2]
Describe the features of the following:

(a) Blog

(b) Wiki

(c) Extreme
The number of people who now shop online has increased over the past few years.

Discuss the advantages and disadvantages to a customer of shopping online rather than travelling to a mall to shop.
