---

**PHYSICAL EDUCATION****0413/12**

Paper 1 Theory

**May/June 2024****MARK SCHEME**

Maximum Mark: 100

---

**Published**

---

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge International will not enter into discussions about these mark schemes.

Cambridge International is publishing the mark schemes for the May/June 2024 series for most Cambridge IGCSE, Cambridge International A and AS Level and Cambridge Pre-U components, and some Cambridge O Level components.

---

This document consists of **21** printed pages.

These general marking principles must be applied by all examiners when marking candidate answers. They should be applied alongside the specific content of the mark scheme or generic level descriptions for a question. Each question paper and mark scheme will also comply with these marking principles.

**GENERIC MARKING PRINCIPLE 1:**

Marks must be awarded in line with:

- the specific content of the mark scheme or the generic level descriptors for the question
- the specific skills defined in the mark scheme or in the generic level descriptors for the question
- the standard of response required by a candidate as exemplified by the standardisation scripts.

**GENERIC MARKING PRINCIPLE 2:**

Marks awarded are always **whole marks** (not half marks, or other fractions).

**GENERIC MARKING PRINCIPLE 3:**

Marks must be awarded **positively**:

- marks are awarded for correct/valid answers, as defined in the mark scheme. However, credit is given for valid answers which go beyond the scope of the syllabus and mark scheme, referring to your Team Leader as appropriate
- marks are awarded when candidates clearly demonstrate what they know and can do
- marks are not deducted for errors
- marks are not deducted for omissions
- answers should only be judged on the quality of spelling, punctuation and grammar when these features are specifically assessed by the question as indicated by the mark scheme. The meaning, however, should be unambiguous.

**GENERIC MARKING PRINCIPLE 4:**

Rules must be applied consistently, e.g. in situations where candidates have not followed instructions or in the application of generic level descriptors.

**GENERIC MARKING PRINCIPLE 5:**

Marks should be awarded using the full range of marks defined in the mark scheme for the question (however; the use of the full mark range may be limited according to the quality of the candidate responses seen).

**GENERIC MARKING PRINCIPLE 6:**

Marks awarded are based solely on the requirements as defined in the mark scheme. Marks should not be awarded with grade thresholds or grade descriptors in mind.

**Science-Specific Marking Principles**

- 1 Examiners should consider the context and scientific use of any keywords when awarding marks. Although keywords may be present, marks should not be awarded if the keywords are used incorrectly.
- 2 The examiner should not choose between contradictory statements given in the same question part, and credit should not be awarded for any correct statement that is contradicted within the same question part. Wrong science that is irrelevant to the question should be ignored.
- 3 Although spellings do not have to be correct, spellings of syllabus terms must allow for clear and unambiguous separation from other syllabus terms with which they may be confused (e.g. ethane / ethene, glucagon / glycogen, refraction / reflection).
- 4 The error carried forward (ecf) principle should be applied, where appropriate. If an incorrect answer is subsequently used in a scientifically correct way, the candidate should be awarded these subsequent marking points. Further guidance will be included in the mark scheme where necessary and any exceptions to this general principle will be noted.

**‘List rule’ guidance**

For questions that require ***n*** responses (e.g. State **two** reasons ...):

- The response should be read as continuous prose, even when numbered answer spaces are provided.
- Any response marked *ignore* in the mark scheme should not count towards ***n***.
- Incorrect responses should not be awarded credit but will still count towards ***n***.
- Read the entire response to check for any responses that contradict those that would otherwise be credited. Credit should **not** be awarded for any responses that are contradicted within the rest of the response. Where two responses contradict one another, this should be treated as a single incorrect response.
- Non-contradictory responses after the first ***n*** responses may be ignored even if they include incorrect science.

**6 Calculation specific guidance**

Correct answers to calculations should be given full credit even if there is no working or incorrect working, **unless** the question states 'show your working'.

For questions in which the number of significant figures required is not stated, credit should be awarded for correct answers when rounded by the examiner to the number of significant figures given in the mark scheme. This may not apply to measured values.

For answers given in standard form (e.g.  $a \times 10^n$ ) in which the convention of restricting the value of the coefficient ( $a$ ) to a value between 1 and 10 is not followed, credit may still be awarded if the answer can be converted to the answer given in the mark scheme.

Unless a separate mark is given for a unit, a missing or incorrect unit will normally mean that the final calculation mark is not awarded. Exceptions to this general principle will be noted in the mark scheme.

**7 Guidance for chemical equations**

Multiples / fractions of coefficients used in chemical equations are acceptable unless stated otherwise in the mark scheme.

State symbols given in an equation should be ignored unless asked for in the question or stated otherwise in the mark scheme.

Question	Answer	Marks
1	1 mark for each:  1 somatic; 2 cognitive;	2
2(a)	1 mark for an appropriate description. 1 mark for an appropriate benefit.  (description) the heart gets bigger / the muscle walls of the heart get thicker / stronger / thicker (left) ventricular walls / stronger contractions / able to pump more blood in each contraction;  (benefit) performer will be able to run / cycle / maintain performance for longer / muscles can work for longer without tiring;	2
2(b)	1 mark for each description.  resting pulse rate / resting heart rate reduces / bradycardia; stroke volume increases / the amount of blood pumped from heart in one beat increases; (maximum) cardiac output increases / the volume of blood pumped in one minute increases; return to resting heart rate more quickly; reduction in heart diseases; increased capillarisation; increase in the number of red blood cells; lowers blood pressure;	3

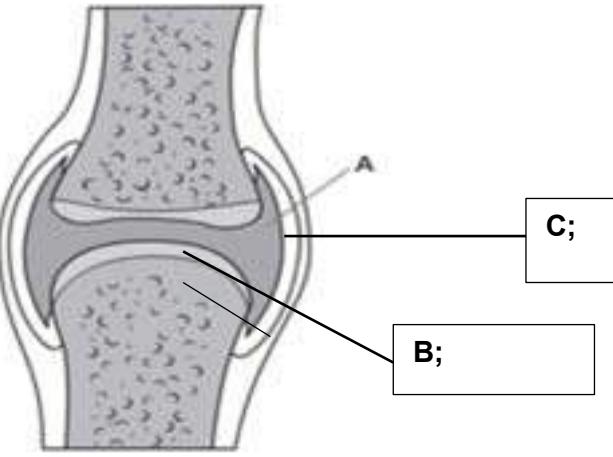

Question	Answer	Marks										
3(a)	<p><b>1 mark for each correct response (in bold).</b></p> <table border="1" data-bbox="332 282 1356 605"> <tr> <td data-bbox="332 282 676 341"><b>component of fitness</b></td><td data-bbox="676 282 1356 341"><b>recognised test</b></td></tr> <tr> <td data-bbox="332 341 676 400">power</td><td data-bbox="676 341 1356 400"><b>Vertical Jump Test;</b></td></tr> <tr> <td data-bbox="332 400 676 458"><b>coordination;</b></td><td data-bbox="676 400 1356 458">Anderson Wall Toss Test</td></tr> <tr> <td data-bbox="332 458 676 517">agility</td><td data-bbox="676 458 1356 517"><b>Illinois Agility Test;</b></td></tr> <tr> <td data-bbox="332 517 676 605"><b>muscular endurance;</b></td><td data-bbox="676 517 1356 605">Multi-Stage Abdominal Curl Conditioning Test</td></tr> </table> <p>Accept alternative appropriate recognised standardised tests.</p>	<b>component of fitness</b>	<b>recognised test</b>	power	<b>Vertical Jump Test;</b>	<b>coordination;</b>	Anderson Wall Toss Test	agility	<b>Illinois Agility Test;</b>	<b>muscular endurance;</b>	Multi-Stage Abdominal Curl Conditioning Test	4
<b>component of fitness</b>	<b>recognised test</b>											
power	<b>Vertical Jump Test;</b>											
<b>coordination;</b>	Anderson Wall Toss Test											
agility	<b>Illinois Agility Test;</b>											
<b>muscular endurance;</b>	Multi-Stage Abdominal Curl Conditioning Test											
3(b)	<p>1 mark for each explanation given.</p> <p>results of test may motivate a performer <b>to</b> work harder and improve / to increase confidence;    set goals / targets from the results of the test <b>so</b> the performer has a clear pathway to progress;    change / increase the type of training <b>to</b> improve strengths / weaknesses;    know when the performer is ready to participate as they are at the optimum level of fitness / participates when <b>at</b> the optimum level of fitness to achieve best results;    compare the results with other performers <b>to</b> ensure they can be competitive in their competition / performance;</p> <p>Accept other appropriate explanations.</p>	3										

Question	Answer	Marks
3(c)	<p>1 mark for each appropriate description.</p> <p>For example in cricket:</p> <p>(reaction time) able to catch the ball when fielding close to the bat / batsman able to hit the ball when facing a fast bowler / respond to the ball changing direction from a spin bowler;</p> <p>(flexibility) able to rotate the arm when bowling so the ball is released from the highest possible point to gain greater bounce / speed;</p> <p>(dynamic balance) the batsman can maintain their body position when pivoting quickly (playing a hook shot) to hit the ball without falling over;</p> <p>Accept other physical activities and examples.</p>	3

Question	Answer	Marks
4(a)(i)	<p>1 mark for each principle (2 marks max.).</p> <p>1 mark for an appropriate description which includes example (2 marks max.).</p> <p>frequency; (description) the performer will increase the number of times they train / increase the number of sessions / add an extra weight training session to the training week;</p> <p>intensity; (description) increase the weight lifted in each set by increasing the weight / increase the number of reps in each set / increase intensity to above 60% of 1 rep max;</p> <p>time; (description) increase the amount of time spent training so a session lasts for longer;</p> <p>type (method of training); (description) change the type of activity to avoid tedium by having sessions that include resistance training / HIIT training / circuit training / plyometric strength / kettlebells / free weights;</p>	4
4(a)(ii)	<p>2 marks for:</p> <p>use a 1 rep max calculator / equation; enter / use the weight previously lifted successfully; enter / use the number of completed reps with the weight; the calculator will provide a result sheet to identify the weight to train with;</p> <p><b>OR</b></p> <p>estimate the maximum amount of weight that can be lifted in one lift / start with a weight that the performer knows they can lift; use a percentage (50%) of the weight and lift successfully; increase weight until they cannot lift the weight / increase weight until they can only perform one rep; use a percentage of the last successful lift as the guide of weight to train with;</p> <p>Accept alternative wording.</p>	2

Question	Answer	Marks
4(b)	<p>1 mark for each description.</p> <p>the area should be kept clear / weights stored correctly;          equipment should be lifted and carried carefully;          performers should wear suitable footwear / covered footwear;          suitable / appropriate clothing should be worn / (accept examples e.g. gloves);          lifters should know the correct technique before lifting;          joint / back support should be worn if needed;          before lifting ensure weights are securely fitted to bar;          warm up / stretch before lifting / cool down;          take rest periods when needed / avoid over-training;          lifting suitable weights, e.g. not attempting to lift too heavy weights / lift weights that are part of a planned programme / performer is capable of lifting weight;          maintaining hydration;          following gym rules;</p> <p>Accept other appropriate descriptions.</p>	2
4(c)	<p>1 mark for each description.</p> <p>Increases strength / power to help a sprinter push out of the blocks;          increases the speed of leg movement to allow greater acceleration;          improves core muscles / aid balance to enable the runner to maintain a good running position / posture;          improves muscular endurance to enable a sprinter to maintain speed towards the end of the race;          maintain an appropriate body weight so runners are not carrying excess weight which may slow them down;          strengthens muscle / improves bone density which helps reduce the possibility of muscle strain / injury;          the coordination required for weight training improves muscle coordination which enhances running / movement economy;          improves mobility and flexibility around joints which enables longer running stride;          focus on specific muscle group for a sprinter, e.g. legs;</p>	2

Question	Answer	Marks
5	<p>advantages / disadvantages (3 marks max. for each). 1 mark for each suggestion.</p> <p>advantages</p> <p>a company can be promoted world-wide / high profile for relatively low cost; a company's image may improve being linked with well-known / global event / performers; may increase the sale of the company's products; can be used as a motivational tool to encourage productivity amongst their employees; able to access tickets for the event to use for corporate activities; sponsorship can reduce the company's tax bill / tax arrangements in certain countries allow companies to reduce a company's tax bill when they sponsor an event;</p> <p>disadvantages:</p> <p>the costs of hosting a global event to the sponsor may increase / become too expensive; if the event is not successful the company's image may decline; if a performer's behaviour / found to take drugs the sales of goods may decline; companies that are associated with sponsoring a global event may develop negative image if the host country has human rights issues / due to the country's politics;</p> <p>Accept other appropriate suggestions.</p>	5

Question	Answer	Marks												
6(a)	<p>1 mark for each correct response (<b>in bold</b>).</p> <table border="1" data-bbox="332 282 1320 679"> <thead> <tr> <th data-bbox="332 282 608 346">name</th><th data-bbox="608 282 907 346">location</th><th data-bbox="907 282 1320 346">classification of bone</th></tr> </thead> <tbody> <tr> <td data-bbox="332 346 608 409"><b>humerus;</b></td><td data-bbox="608 346 907 409">upper arm</td><td data-bbox="907 346 1320 409"><b>long;</b></td></tr> <tr> <td data-bbox="332 409 608 473">talus</td><td data-bbox="608 409 907 473"><b>ankle;</b></td><td data-bbox="907 409 1320 473"><b>short;</b></td></tr> <tr> <td data-bbox="332 473 608 679"><b>scapula</b> <b>or</b> <b>cranium</b> <b>or</b> <b>pelvis;</b></td><td data-bbox="608 473 907 679"><b>shoulder</b> <b>or</b> <b>head</b> <b>or</b> <b>hips;</b></td><td data-bbox="907 473 1320 679">flat</td></tr> </tbody> </table>	name	location	classification of bone	<b>humerus;</b>	upper arm	<b>long;</b>	talus	<b>ankle;</b>	<b>short;</b>	<b>scapula</b> <b>or</b> <b>cranium</b> <b>or</b> <b>pelvis;</b>	<b>shoulder</b> <b>or</b> <b>head</b> <b>or</b> <b>hips;</b>	flat	6
name	location	classification of bone												
<b>humerus;</b>	upper arm	<b>long;</b>												
talus	<b>ankle;</b>	<b>short;</b>												
<b>scapula</b> <b>or</b> <b>cranium</b> <b>or</b> <b>pelvis;</b>	<b>shoulder</b> <b>or</b> <b>head</b> <b>or</b> <b>hips;</b>	flat												
6(b)	<p>1 mark each example.</p> 	2												

Question	Answer	Marks
7	<p>1 mark for each component of blood (2 marks max.).  1 mark for an appropriate function (2 marks max.).</p> <p>white blood cells;  (function) defends / fights against pathogens / infections;</p> <p>plasma;  (function) allows substances to be transported (easily) / plays a role in maintaining blood pressure / helps maintain body temperature / affects the viscosity of blood;</p> <p>platelets;  (function) clots the blood (when blood vessels are damaged / cut) / creates a scab;</p>	4

Question	Answer	Marks
8(a)(i)	<p>1 mark for:</p> <p>during isotonic contraction muscle changes length / shortens or lengthens as they contract <b>but</b> during isometric contraction the muscle stays the same length;</p>	1
8(a)(ii)	<p>1 mark for the tick next to:</p> <p>sprinter in the blocks ready to start a race;</p>	1
8(b)	<p>1 mark for each movement.  1 mark for each correct named muscle.</p> <p>(elbow joint)  movement: flexion;  antagonist muscle: triceps;</p> <p>(shoulder joint)  movement: extension;  antagonist muscle: pectoral(s);</p>	4

Question	Answer	Marks
9(a)	<p>1 mark for an appropriate nutrient.  1 mark for a correct food source.</p> <p>fats;  (food source) red meats / butter / cooking oil / cheese / bacon / fish / nuts / avocado;</p> <p>protein;  (food source) milk / butter / lentils / eggs / baked beans / nuts / cottage cheese / meat / poultry;</p> <p>Accept other appropriate examples of a food source.</p>	2
9(b)	<p>1 mark for:  during the main part of the race aerobic respiration is used to release energy <b>BUT</b> during the sprint anaerobic respiration is used to release energy;</p> <p>AND</p> <p>2 marks for:  equation for the main part of the race / glucose + oxygen <math>\rightarrow</math> CO<sub>2</sub> + H<sub>2</sub>O (energy) <b>AND</b> equation during the sprint / glucose <math>\rightarrow</math> lactic acid;</p> <p><b>OR</b></p> <p>2 from:  oxygen is available to the muscles (through red blood cells) throughout the main part of the race <b>BUT</b> during the sprint oxygen can no longer reach muscles quickly enough;</p> <p>in the main part of the race oxygen combines with glucose (in the muscle) to produce energy <b>BUT</b> during the sprint energy is produced from glucose without oxygen being present;</p> <p>in the main part of the race carbon dioxide and water are the waste products produced and can be excreted <b>BUT</b> during the sprint lactic acid is produced which remains in the muscles until running stops and recovery takes place;</p>	3

Question	Answer	Marks
10(a)	<p>1 mark for each factor explained.</p> <p>age and maturity: some activities have age restrictions preventing young performers from participating <b>so</b> skill levels will be low; the earlier someone starts playing a sport allows more opportunity to learn a skill <b>so</b> skill levels may be higher compared to others of a similar age; older performers may have more experience of when to apply skills for the best result <b>so</b> have a higher skill level; young children have not developed coordination / balance needed <b>so</b> skill level is low / elderly people's coordination may decrease <b>so</b> skill level is lower;</p> <p>culture: certain sports have greater exposure / opportunities in certain countries <b>so</b> have a higher profile which leads to higher skill level; some countries excel in certain sports <b>so</b> greater opportunities to play that sport leading to higher skill level; the culture within families to play certain sports <b>so</b> often means children are influenced to play leading to higher skill level; some sports are traditional due to climate and geography <b>so</b> people expect to take part e.g cross country skiing in Norway so skill levels are higher; some women's participation may be restricted <b>so</b> their skill level may be lower;</p> <p>arousal conditions: underarousal (LOW) / overarousal (HIGH) results in a lack of focus <b>which</b> results in low skill levels; optimal arousal leads to being focused and results in high skill levels; a performer who prefers low arousal activities <b>may</b> perform fine motor skills at a higher level; a performer who prefers high arousal activities <b>may</b> perform gross motor skills at a higher level;</p> <p>motivation: if the performer lacks motivation, they will not work hard in training to improve skills <b>so</b> skill levels are low; a performer with low motivation will not have focus / give up easily if a skill proves to be difficult to learn <b>so</b> skill levels are low; a motivated performer will be prepared to sacrifice things to work hard to improve <b>so</b> skill levels will be high;</p> <p>accept reverse points. Accept other appropriate examples</p>	4

Question	Answer	Marks
10(b)(i)	<p>1 mark for a characteristic.  1 mark for an appropriate example.</p> <p>fluent:  a performer can catch the ball and pass it without hesitation;</p> <p>aesthetically pleasing;  example: the performer can jump high to catch the ball cleanly which looks good to the coach;</p> <p>consistent;  example: the performer can throw the ball at a line out so his team can catch the ball the majority of the time;</p> <p>accurate;  example: the performer can successfully kick the ball between the posts at a penalty;</p> <p>goal-directed;  the performer follows the coach's game plan, e.g. kicking the ball across the pitch when a player is unmarked;</p> <p>coordinated;  example: a performer can catch the ball and kick whilst continuing to run;</p> <p>Accept other examples from rugby.</p>	2

Question	Answer	Marks
10(b)(ii)	<p>1 mark for a characteristic.  1 mark for an appropriate example.</p> <p>fluent;  example: the gymnast can link movements smoothly such as moving from a hand spring into a front walk over;</p> <p>aesthetically pleasing;  example: the handstand look good and enable the judges to give a high score;</p> <p>consistent;  example: the gymnast can land somersaults correctly most times without falling;</p> <p>accurate;  example: the performer can complete a floor-routine without stepping off the mat;</p> <p>goal-directed;  example: to complete a beam routine without falling from the beam;</p> <p>coordinated;  example: the gymnast can know where their body is in space to be able to start a rotation during a vault and know when to extend legs to be able to land;</p> <p>Accept other appropriate examples from gymnastics.</p>	2

Question	Answer	Marks
11(a)(i)	<p>1 mark for each:</p> <p><b>A:</b> performance; <b>B:</b> foundation;</p>	2
11(a)(ii)	<p>1 mark for each characteristic described.</p> <p>beginners / young people / school age; take part in mass participation activities; participating for fun / recreation / not competitive; learning / developing basic skills / learning rules; take part in PE lessons / 'mini-sports' activities;</p> <p>Accept other appropriate characteristics.</p>	3
11(b)	<p>1 mark for each strategy.</p> <p>higher level / national level coaching; able to attend sports academies / play at county / area levels; higher level of support / medical / mentoring etc; playing for higher level clubs; training / participating more frequently; focusing on one or two sports / developing specific skills; increasing focus on a more professional approach and less on fun; governing sports bodies involved in the development of the performer; access to higher level / good facilities;</p> <p>Accept other appropriate strategies.</p>	3

Question	Answer	Marks
12(a)	1 mark for each stage:  pulse raiser; stretches; familiarisation / skill-related activities;	3
12(b)	1 mark for each description.  gives time for the performer to mentally relax / calm down; offer a chance to reflect on performance; helps transition back into everyday life;	2
12(c)	3 from:  the harder / longer a person exercises for the longer the period of recovery; as a person gets older, they generally take longer to recover than a younger person; a person who has better quality and quantity of sleep usually recover quicker (as this allows the body to restore itself physically and mentally); if a performer is overtraining, they will (tire more quickly / may result in a stress injury) which take longer to recover; genetics may result in a quicker recovery due to inherited characteristics from their parents; performing in extreme environmental conditions may cause a performer to recover slower; if a performer does not eat the appropriate nutrients / at the right time recovery will be slower; poor hydration / dehydration will slow recovery (as water is necessary to aid muscle repair); if a performer takes drugs / drinks alcohol excessively / smokes this may result in slow recovery; if the general health / body weight of a performer is poor it may increase recovery time; a fitter person may recover faster (have less lactic acid in muscles / may be able to remove lactic acid quicker); the quality of equipment such as running shoes / protective equipment may reduce the impact on joints and reduce time to recover;  Accept negative and positive responses.	3

Question	Answer	Marks
13(a)	1 mark for each:  <b>A:</b> trachea; <b>B:</b> bronchioles; <b>C:</b> alveoli;	<b>3</b>
13(b)	1 mark for each description.  tidal volume: the volume / amount of air you inhale or exhale with <b>each breath</b> ;  vital capacity: the <b>maximum</b> volume / amount of air you can breathe out <b>after breathing in as deeply as you can</b> ;  residual volume: the volume / amount of air left in the lungs after <b>breathing out maximally</b> / the amount of air left in the lungs to prevent them collapsing;  minute ventilation: the volume / amount of air inhaled or exhaled <b>per minute</b> ;	<b>4</b>

Question	Answer	Marks
14	1 mark for each correct description.  breathing rate increases / more oxygen enters the lungs; adrenaline is produced / released into the blood; increase in tidal volume; increase in minute ventilation; increase blood flow / oxygen supply to working muscles; increase production / removal of carbon dioxide; increase in lactic acid production; stroke volume increases; cardiac output increases; skin becomes redder / vasodilation of blood vessels closer to the skin / more blood flows into vessels closer to the skin; body temperature increases / increase in muscle temperature; sweat produced / increase in sweating; fatigue / feeling tired; suffering from nausea / feeling light-headed / feeling unwell; increase in blood pressure;	3

Question	Answer	Marks
15(a)(i)	1 mark for: 2nd class / second class (lever);	1
15(a)(ii)	1 mark for each.  component: fulcrum; component: resistance; component: effort;	3
15(b)	1 mark for each named force (2 marks max.). 1 mark for an appropriate explanation (2 marks max.).  gravity; explanation: pulls the jumper downward towards the landing pit;  air resistance; explanation: as the jumper moves through the air, the performer is slowed by air resistance acting against them / acts in the opposite direction to the jumper / the faster the jumper is moving the greater the air resistance;  muscular force; explanation: the force at take-off will push the jumper into the air until it is overcome by gravity and air resistance / the bigger the muscular force the further they will jump;  ground reaction force; explanation: the reaction to the force that jumper exerts on the take-off board to gain height and distance in the jump / the force exerted by the jumper will create an equal and opposite force from the board;	4
15(c)	1 mark for each.  intrinsic; extrinsic; knowledge of performance; knowledge of results;  Accept other appropriate answers.	3
