Paper 6 Alternative to Practical

October/November 2024**1 hour**

You must answer on the question paper.

No additional materials are needed.

INSTRUCTIONS

- Answer **all** questions.
- Use a black or dark blue pen. You may use an HB pencil for any diagrams or graphs.
- Write your name, centre number and candidate number in the boxes at the top of the page.
- Write your answer to each question in the space provided.
- Do **not** use an erasable pen or correction fluid.
- Do **not** write on any bar codes.
- You may use a calculator.
- You should show all your working and use appropriate units.

INFORMATION

- The total mark for this paper is 40.
- The number of marks for each question or part question is shown in brackets [].

This document has **12** pages. Any blank pages are indicated.

- 1 A student investigates the period of a pendulum. Fig. 1.1 shows the set up.

Fig. 1.1

- (a) The student adjusts the length of the pendulum until the distance d measured from the bottom of the support to the centre of the bob is 90.0 cm.

He displaces the bob slightly and releases it so that it swings.

He measures, and records in Table 1.1, the time t for 10 complete oscillations.

Calculate, and record in Table 1.1, the period T of the pendulum. The period is the time for 1 complete oscillation.

Calculate a value for T^2 and record in Table 1.1.

[2]

Table 1.1

d/cm	$t/$	$T/$	$T^2/$
90.0	19.1		
45.0	13.5		

- (b) The student repeats the procedure in (a) using a distance $d = 45.0$ cm.

Calculate, and record in Table 1.1, the period T of the pendulum.

Calculate a value for T^2 and record in Table 1.1.

[1]

- (c) Complete the column headings in Table 1.1.

[2]

- (d) Explain why timing 10 oscillations gives a more accurate result for the period T than timing 1 oscillation.

.....
 [1]

- (e) Describe **one** technique that you use to improve accuracy when measuring the distance d .

You may draw a diagram to help your description.

.....
 [1]

- (f) Describe **one** technique that you use to improve accuracy when measuring the time t for 10 oscillations.

.....

 [1]

- (g) The pendulum support is 40 cm above the bench. Estimate the distance x between the bottom of the pendulum support and the floor.

$x =$ cm [1]

- (h) A student plans to plot a graph of T^2 against d . Suggest suitable values of d that the student can use to obtain measurements that are sufficient for this task.

.....
 [2]

[Total: 11]

2 A student investigates the cooling of water in a metal container.

- (a) The student uses a thermometer to measure room temperature θ_R . Room temperature is 23°C . Show clearly, on Fig. 2.1, the reading θ_R .

Fig. 2.1

[1]

- (b) Fig. 2.2 shows the apparatus set up for the investigation.

Fig. 2.2

The student pours 200 cm^3 of hot water into the metal container. She places the thermometer in the hot water in the container. She records the temperature at time $t = 0$. She immediately starts a stop-watch.

She records the temperature in Table 2.1 at 30 s intervals until she has seven sets of readings.

Complete the column headings in Table 2.1.

[1]

Table 2.1

$t/$	$\theta/$
0	92
0.5	86
1.0	82
1.5	79
2.0	77
2.5	75
3.0	74

(c) Plot a graph of temperature θ (y -axis) against time t (x -axis). Label your axes appropriately.

You do not need to start the y -axis at 0. Draw the best-fit curve.

[4]

- (d) A student states that the average rate of cooling of the water decreases as the temperature of the water approaches room temperature.

State whether your graph line supports this suggestion. Explain your answer by reference to the shape of the graph line.

statement

.....

explanation

.....

.....

[2]

- (e) Explain why it is good practice to read the thermometer scale at right angles to the reading.

.....

..... [1]

- (f) Draw a measuring cylinder containing water. On your diagram show the line of sight you use to obtain an accurate reading of the volume of water.

[2]

BLANK PAGE

- 3 A student investigates the image produced by a lens.

Fig. 3.1 shows the set up.

Fig. 3.1

Fig. 3.2

- (a) On Fig. 3.2, measure the height h_O of the illuminated object.

$$h_O = \dots\dots\dots \text{cm} \quad [1]$$

- (b) The student places the lens at a distance $u = 25.0$ cm from the illuminated object.

He moves the screen until a clearly focused image is formed on the screen.

He measures the distance v between the centre of the lens and the screen.

$$v = \dots\dots\dots 41.2 \dots\dots\dots \text{cm}$$

Describe **two** techniques that you use to obtain a clearly focused image.

- 1
- 2

[2]

- (c) Calculate the focal length f of the lens using the equation $f = \frac{uv}{(u + v)}$.

Give your answer to three significant figures and include the unit.

$$f = \dots\dots\dots [3]$$

- (d) The object is brighter than the image. Complete the sentences to describe **two** other ways in which the image seen on the screen is different from the object.

1 The image is

2 The image is

[2]

- (e) The student repeats the steps in (b) using a distance $u = 30.0$ cm.

$$v = \dots\dots\dots 29.8 \dots\dots\dots \text{cm}$$

Calculate the focal length f of the lens using the equation $f = \frac{uv}{(u + v)}$.

$$f = \dots\dots\dots [1]$$

- (f) State and explain whether your results for the focal length f are equal within the limits of experimental accuracy.

statement

[Total: 11]

- 4 A student investigates the current required to melt different fuse wires.

Fig. 4.1 shows part of the circuit the student uses.

The following equipment is also available:

- fuse wires with a selection of different diameters and metals (all with the same length)
- metre ruler
- ammeter
- variable resistor

Fig. 4.1

Plan an experiment to investigate how **one** factor affects the current required to melt a fuse wire.

You do **not** need to write about safety precautions.

In your plan:

- state the variable that you choose to investigate
- complete the circuit diagram on Fig. 4.1
- explain briefly how to do the investigation
- state a key variable to keep constant
- draw a table, or tables, with column headings, to display the readings (you are **not** required to enter any readings in the table)
- explain how to use your results to reach a conclusion.
