Paper 3 Theory (Core)

October/November 2020

1 hour 15 minutes

You must answer on the question paper.

No additional materials are needed.

INSTRUCTIONS

- Answer all questions.
- Use a black or dark blue pen. You may use an HB pencil for any diagrams or graphs.
- Write your name, centre number and candidate number in the boxes at the top of the page.
- Write your answer to each question in the space provided.
- Do not use an erasable pen or correction fluid.
- Do not write on any bar codes.
- You may use a calculator.
- You should show all your working and use appropriate units.

INFORMATION

- The total mark for this paper is 80.
- The number of marks for each question or part question is shown in brackets [].
- The Periodic Table is printed in the question paper.

This document has 20 pages. Blank pages are indicated.

[Turn over

1 (a) Fig. 1.1 is a diagram of some parts of the body.

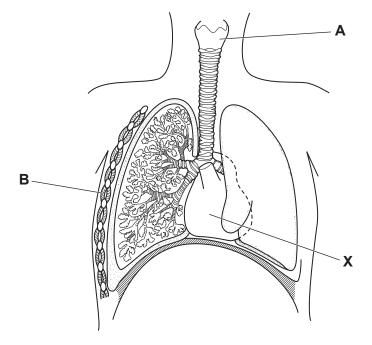

Fig. 1.1

(i)	Identify parts A and B shown in Fig. 1.1.	
	A	
	В	[2]
(ii)	Describe the function of part X shown in Fig. 1.1.	

(b) Fig. 1.2 shows the rate and depth of breathing of a person while at rest and during exercise.

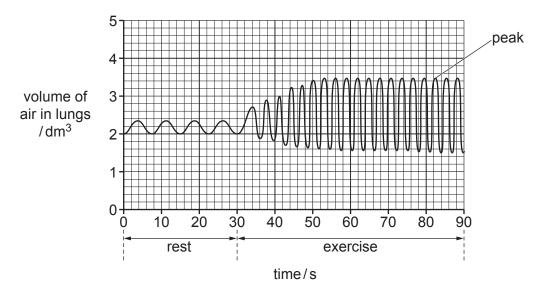

Fig. 1.2

Each time the line rises to a peak, the person is breathing in.

(i) Use Fig. 1.2 to determine the number of breaths the person takes while at rest.

number of breaths =[1]

(ii) Describe how the rate and depth of breathing of the person change during exercise, as shown in Fig. 1.2.

rate

deptn[2]

(c) The purpose of breathing is to obtain oxygen for respiration.

Complete the word equation for respiration.

[Total: 8]

[2]

2 (a) Copper is extracted from copper oxide by heating with carbon, as shown in Fig. 2.1.

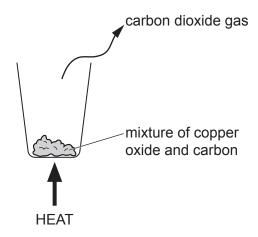

Fig. 2.1

Carbon dioxide is produced in this process.

(i) Complete the word equation for this process.

(ii) Use words from the list to describe substances involved in this process.

Each word may be used once, more than once or not at all.

atoms	compound		covalent	element	
	ionic	ions	solution		
Copper oxide	is a		conta	aining oppositely charge	b
In carbon dio	xide, each mol	ecule contain	s three		
chemically joi	ned by		bo	onds.	[4]
					וי ז

	(iii)	State whether the change from copper oxide to copper during this process is oxidation reduction.	n or
		Explain your answer.	
		change	
		explanation	
			[1]
(b)	Alur	minium is extracted from the ore bauxite.	
	(i)	State the method of extraction of aluminium from bauxite.	
			[1]
	(ii)	An atom of aluminium is represented by the symbol shown.	
		$^{27}_{13}$ A l	
		Deduce the number of electrons and the number of neutrons in this atom.	
		electrons	
		neutrons	[2]
		[Total:	10]

3 (a) Fig. 3.1 shows the distance—time graph for a man.

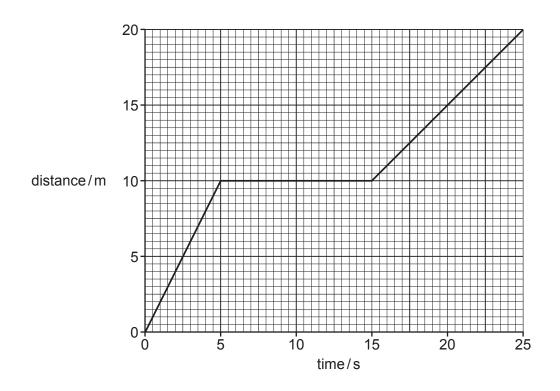

Fig. 3.1

[1
[1

(b) The weight of the man is 800 N.

The gravitational field strength g is $10 \,\mathrm{N/kg}$.

Calculate the mass of the man.

mass = kg [1]

(c) (i) The man enters a lift (elevator). The lift moves the man vertically upwards.

The lift uses an electric motor.

Complete the useful energy transfers for the lift and man.

electrical energy supplied to the electric motor	energy of the lift and man	+	potential energy of the lift and man
--------------------------------------------------	----------------------------------	---	--------------------------------------

(ii) The amount of electrical energy supplied to the electric motor is actually greater than the useful work done in moving the lift and man up to the higher level.

[2]

Suggest why.		
		[0]
		[Total: 9]

4 (a) Fig. 4.1 shows diagrams of a plant cell before and after the cell is immersed in concentrated sugar solution.

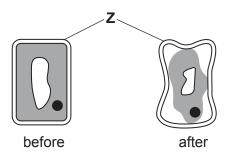

Fig. 4.1

(i)	Identify part Z shown in Fig. 4.1.
	[1]
(ii)	Describe the effect of immersing the cell in concentrated sugar solution.
	[2]

(b) Fig. 4.2 is a drawing of a cross-section of a plant root.

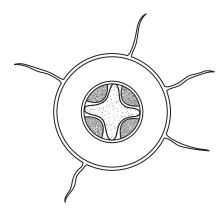

Fig. 4.2

(i)	On Fig. 4.2, use a label line and the letter X to show the position of the xylem.	[1]
(ii)	State the function of root hair cells.	
		[1]
(iii)	Water moves through xylem vessels to the leaves due to transpiration.	
	State the process by which water in the leaves is lost:	
	from the surface of the mesophyll cells	
	through the stomata.	[2]
Wa	ter is used in photosynthesis.	
	otosynthesis is the process by which plants manufacture carbohydrates from raw matering energy from light.	ials
(i)	State the name of the structures inside plant cells where photosynthesis takes place.	
		[1]
(ii)	State the name of the gas produced in photosynthesis.	
		[1]
	[Total	l: 9]

(c)

			10
5	(a)	Air	is a mixture of different gases.
		(i)	Name the gas that makes up 78% of clean air.
			[1]
		(ii)	Name the gas that must be present for iron to rust.
			[1]
		(iii)	Name one common air pollutant and describe one adverse effect that is caused by this pollutant.
			pollutant
			adverse effect[2]
		(iv)	State the formulae of two greenhouse gases.
			1
			2[2]
	(b)	Fig.	5.1 is an incomplete dot-and-cross diagram of a molecule of water.
	` ,		Fig. 5.1, draw dots and crosses to show all of the outer shell electrons in a molecule of
		wat	
			O H
			Fig. 5.1 [3]
	(c)	Des	scribe the effect of water on blue cobalt(II) chloride.
	(5)		The same of the sa

.....[1]

[Total: 10]

6 Fig. 6.1 shows a girl using a bicycle pump to add air to a bicycle tyre.

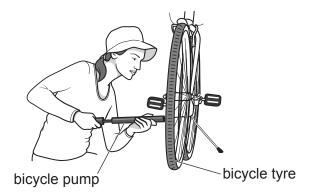

Fig. 6.1

(a) Fig. 6.2 shows the arrangement of molecules in the air inside the bicycle tyre.

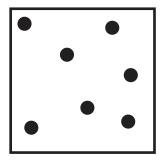

Fig. 6.2

(i)	Suggest what happens to the separation of the molecules as the girl pumps more air into the tyre.
	[1]
(ii)	The temperature of the air in the tyre increases.
	Describe how the movement of the molecules changes as this happens.
	[1]

(b) Fig. 6.3 shows the girl wearing a cotton hat on a sunny day.

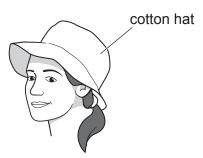

Fig. 6.3

(i)	State the method of energy transfer from the Sun to the Earth.	
		[1]
(ii)	Suggest two ways the cotton hat reduces energy transfer from the Sun to the girl's he	ead.
	1	
	2	
		[2]
(iii)	The girl puts a sunscreen cream on the skin of her face.	
	Suggest how this precaution helps reduce the risk of sunburn.	
		ro:

(c) Fig. 6.4 shows a bell fixed on the handlebars of the bicycle.

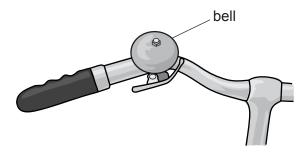

Fig. 6.4

(i) Fig. 6.5 represents the sound wave produced when the girl rings the bell.

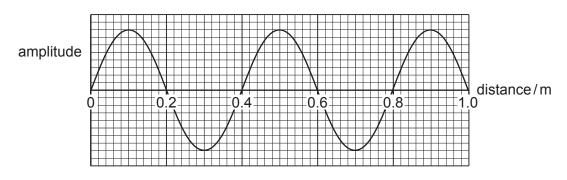

Fig. 6.5

Use Fig. 6.5 to find the wavelength of the sound wave produced by the bell.

(ii) The girl makes the bell ring louder.

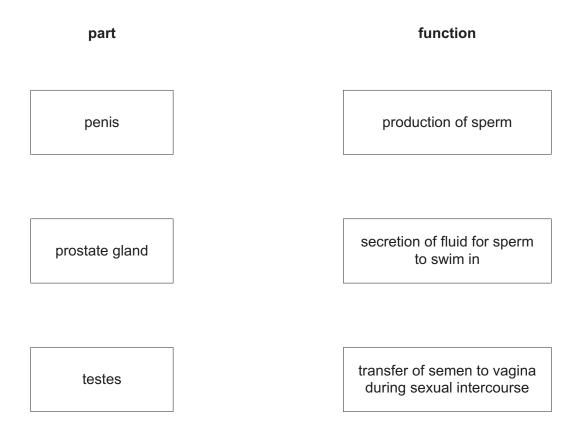

Describe the difference this makes to the sound wave produced.

______[1]

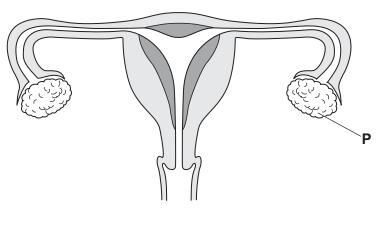

[Total: 9]

7 (a) The boxes on the left show some parts of the male reproductive system in humans. The boxes on the right show the function of each part.

Draw **one** straight line from each part to its function.

(b) Fig. 7.1 is a diagram of the female reproductive system in humans.

[2]

Fig. 7.1

(i) On Fig. 7.1, use a label line and the letter **F** to show where fertilisation occurs. [1]

(ii)	Describe the changes that occur in structure P during the menstrual cycle.
(iii)	Fig. 7.2 shows the process of human fertilisation and early development of an embryo.
	embryo
	Fig. 7.2
	Commission Time 7.0 vising a commission than link

Complete Fig. 7.2 using words from the list.

fetus

	sperm uterus zygote	[3]
(c)	Human immunodeficiency virus (HIV) is a sexually transmitted infection.	
	State two ways of preventing the transmission of HIV.	
	1	
	2	[2]

nucleus

ovum

8	(a)	Sod acid	ium chloride is made when aqueous sodium hydroxide is mixed with dilute hydrochloric
			e what happens to the pH of the mixture as the aqueous sodium hydroxide is added to dilute hydrochloric acid.
			[1]
	(b)	Sod	ium is in Group I of the Periodic Table, and chlorine is in Group VII.
		(i)	Describe the change in character of elements across a period in the Periodic Table from left to right.
			[1]
		(ii)	Describe the trend in reactivity of Group I metals from lithium to potassium.
			[1]
		(iii)	Describe the trend in physical state of Group VII elements from fluorine to iodine.
	<i>(</i>)	4	[1]
	(c)	Aqu	eous bromine reacts with alkenes.
		(i)	State the colour change that occurs during this reaction.
			[1]
		(ii)	Name the reaction that produces alkenes from larger alkane molecules.
			[1]
			[Total: 6]

BLANK PAGE

9 Fig. 9.1 shows an electric toaster that is used for toasting slices of bread.

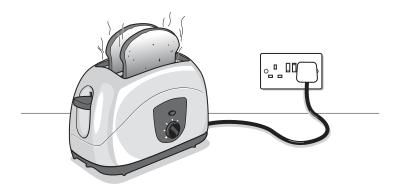

Fig. 9.1

(a) The toaster uses a 230 V mains electricity supply as a source of energy.

The toaster contains:

- two heaters connected in parallel
- one switch to turn both heaters on and off
- a fuse to protect the circuit.

On Fig. 9.2, complete the circuit diagram for the toaster.

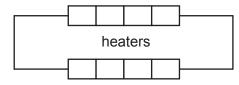

Fig. 9.2

[4]

(b)	A w	ire in one of the heaters breaks, and that heater stops working. The fuse is not affected.
	(i)	Explain why the other heater continues to work.
		[1]
	(ii)	The potential difference (p.d.) across the working heater is 230 V.
		The current in the working heater is 2.5A.
		Calculate the resistance of the heater.
		Give the unit of your answer.
		resistance = unit [3]
(c)		fuse in the circuit now needs replacing. The current from the source when both heaters working is 5.0A.
	Circ	cle the most appropriate fuse rating for the replacement fuse. Give a reason for your ice.
