

**CAMBRIDGE INTERNATIONAL EXAMINATIONS**

**GCE Ordinary Level**

## **MARK SCHEME for the October/November 2013 series**

### **5070 CHEMISTRY**

**5070/31**

Paper 3 (Practical Test), maximum raw mark 40

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge will not enter into discussions about these mark schemes.

Cambridge is publishing the mark schemes for the October/November 2013 series for most IGCSE, GCE Advanced Level and Advanced Subsidiary Level components and some Ordinary Level components.

Page 2	Mark Scheme	Syllabus	Paper
	GCE O LEVEL – October/November 2013	5070	31

1 (a) Titration

Accuracy 8 marks

For the two best titres give:

4 marks for a value within 0.2 cm<sup>3</sup> of supervisor

2 marks for a value within 0.3 cm<sup>3</sup> of supervisor

1 mark for a value within 0.4 cm<sup>3</sup> of supervisor

Concordance 3 marks

Give:

3 marks if all the ticked values are within 0.2 cm<sup>3</sup>

2 marks if all the ticked values are within 0.3 cm<sup>3</sup>

1 mark if all the ticked values are within 0.4 cm<sup>3</sup>

Average 1 mark

Give 1 mark if the candidate calculates a correct average (error not greater than 0.05) of all his/her ticked values. [12]

Assuming a 25.0 cm<sup>3</sup> pipette and a titre of 25.2 cm<sup>3</sup>,

(b) moles of hydrochloric acid present in average volume of **Q**

$$= \frac{25.2 \times 0.2}{1000}$$

$$= 0.00504 \quad [1]$$

(c) moles of sodium carbonate in **P**

$$= \frac{25.0 \times 0.02}{1000}$$

$$= 0.0005 \quad [1]$$

(d) moles of hydrochloric acid reacting with sodium carbonate

$$= 2 \times 0.0005$$

$$= 0.001 \quad [1]$$

<b>Page 3</b>	<b>Mark Scheme</b>	<b>Syllabus</b>	<b>Paper</b>
	<b>GCE O LEVEL – October/November 2013</b>	<b>5070</b>	<b>31</b>

(e) moles of hydrochloric acid reacting with sodium hydroxide

$$= 0.00504 - 0.001$$

$$= 0.00404 \quad [1]$$

(f) concentration of sodium hydroxide in P

$$= \frac{0.00404 \times 1000}{25.0}$$

$$= 0.162 \text{ mol/dm}^3 \quad [1]$$

**[Total: 17]**

	<b>GCE O LEVEL – October/November 2013</b>	<b>5070</b>	<b>31</b>

2 R is sulfuric acid; S is potassium iodide.

<b>Observations</b>	<b>Notes</b>
<p><b>General points</b>            For ppt/precipitate            allow solid, suspension, powder</p> <p>For gases            Name of gas requires test to be at least partially correct.            effervesces = bubbles = gas vigorously evolved but <b>not</b> gas evolved</p> <p>For solutions            colourless not equivalent to clear, clear not equivalent to colourless</p>	
Test 1  (a) white ppt (1)  (b) insoluble in acid (1)	
Test 2  effervescence (1)  pops with a lighted splint (1)  hydrogen (1)  solid disappears (1)	to score hydrogen mark there must be some indication of a test e.g. 'popped with a splint', 'tested with a burning splint'
Test 3  effervescence (1)  turns limewater milky (1)  carbon dioxide (1)  solid disappears (1)	to score carbon dioxide mark there must be some indication of the limewater test e.g. 'tested with limewater'

Page 5	Mark Scheme	Syllabus	Paper
	GCE O LEVEL – October/November 2013	5070	31

Test 4		
(a) yellow ppt	(1)	
(b) insoluble in acid	(1)	
Test 5		
(a) filtrate is yellow/red/brown	(1)	
(b) turns blue-black	(1)	allow blue or black but not purple
Test 6		
(a) turns yellow/brown	(1)	
solid formed	(1)	
(b) decolourised	(1)	
white solid remains	(1)	
Test 7		
(a) yellow/brown solution	(1)	accept liquid turns brown for 1 mark in (a)
black solid	(1)	
(b) solid disappears	(1)	
yellow solution	(1)	accept colourless solution
(c) liquid turns brown	(1)	accept black solid and/or yellow/brown liquid

A cation in **R** is hydrogen/ $H^+$  (bubbles or gas tested in test 2 or 3). [1]

An anion present in **R** is sulfate/ $SO_4^{2-}$  (test 1 white ppt remains in acid). [1]

If cation and anion identifications are both correct but inverted allow 1 mark.

**S** is NaI [1]

**Note: There are 26 scoring points – any 23 to score.**

**[Total: 23]**
