Paper 2 Problem-solving and Programming MARK SCHEME Maximum Mark: 50 2210/22 May/June 2022

Published

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge International will not enter into discussions about these mark schemes.

Cambridge International is publishing the mark schemes for the May/June 2022 series for most Cambridge IGCSE, Cambridge International A and AS Level and Cambridge Pre-U components, and some Cambridge O Level components.

Generic Marking Principles

These general marking principles must be applied by all examiners when marking candidate answers. They should be applied alongside the specific content of the mark scheme or generic level descriptors for a question. Each question paper and mark scheme will also comply with these marking principles.

GENERIC MARKING PRINCIPLE 1:

Marks must be awarded in line with:

- the specific content of the mark scheme or the generic level descriptors for the question •
- the specific skills defined in the mark scheme or in the generic level descriptors for the question •
- the standard of response required by a candidate as exemplified by the standardisation scripts.

GENERIC MARKING PRINCIPLE 2:

Marks awarded are always whole marks (not half marks, or other fractions).

GENERIC MARKING PRINCIPLE 3:

Marks must be awarded positively:

- marks are awarded for correct/valid answers, as defined in the mark scheme. However, credit is given for valid answers which go beyond the • scope of the syllabus and mark scheme, referring to your Team Leader as appropriate
- marks are awarded when candidates clearly demonstrate what they know and can do .
- marks are not deducted for errors •
- marks are not deducted for omissions
- answers should only be judged on the quality of spelling, punctuation and grammar when these features are specifically assessed by the question as indicated by the mark scheme. The meaning, however, should be unambiguous.

GENERIC MARKING PRINCIPLE 4:

Rules must be applied consistently, e.g. in situations where candidates have not followed instructions or in the application of generic level descriptors.

GENERIC MARKING PRINCIPLE 5:

Marks should be awarded using the full range of marks defined in the mark scheme for the question (however; the use of the full mark range may be limited according to the quality of the candidate responses seen).

GENERIC MARKING PRINCIPLE 6:

Marks awarded are based solely on the requirements as defined in the mark scheme. Marks should not be awarded with grade thresholds or grade descriptors in mind.

Please note the following further points:

The words in **bold** in the mark scheme are important text that needs to be present, or some notion of it needs to be present. It does not have to be the exact word, but something close to the meaning.

If a word is underlined, this exact word must be present.

A single forward slash means this is an alternative word. A double forward slash means that this is an alternative mark point.

Ellipsis (...) on the end of one-mark point and the start of the next means that the candidate **cannot** get the second mark point without being awarded the first one. If a mark point has an ellipsis at the beginning, but there is no ellipsis on the mark point before it, then this is just a follow-on sentence and **can** be awarded **without** the previous mark point.

Question	Answer							
Section A								
1(a)(i)	Many correct answers, the name used must be meaningful. The name given is an example only.One mark per mark point, max threeConstantAdultCostOneDayValue20.00UseStoring the cost of an adult ticket for one day	3						
1(a)(ii)	Many correct answers, the name used must be meaningful. The name given is an example only. One mark per mark point, max three Variable NumberOfTickets // NumberOfAdultTickets Data type Integer Use Inputting the number of tickets purchased // Inputting the number of adult tickets purchased	3						
1(b)	One mark per mark point, max three MP1 using an array or variables // lookup // input today's date MP2 use a loop / FOR / REPEAT / WHILE statement MP3 to output / display today's date / today using a suitable message MP4 and the 6/7 following dates/days // loop 6/7 times or MP5 MP6 array/ variables contains all the days of the week / the next seven days or dates MP7 attempt to output / display available days using a suitable message(s)	3						
1(c)	Onemark per mark point, max twoMP1method used to allocate a new number, e.g. initialise a variable or counter // select a random numberMP2how it ensured uniqueness, e.g. every booking number is one larger than the previous number// check existing bookings to ensure it hasn't been used before	2						

Question	Answer	Marks
1(d)	One mark per mark point, max six MP1 initialise a running total for the cost of the booking MP2 input (with prompt) the number of tickets MP3 attempt to identify type of ticket MP4 add the cost of tickets to the running total MP5 ability to book several types of ticket MP6 attempt to check that the number of children booked is less than or equal to twice the number of adults MP7 attempt to identify type of attraction MP8 input with prompt the number of selected attractions required MP9 check that this number is not greater than the total number of tickets booked	6
	<pre>Example answer TotalCost ← 0 TotalPeople ← 0 OUTPUT "Do you want single tickets? Y/N" INPUT Single IF Single = "Y" THEN FOR Type ← 1 TO 3 // adults, children and seniors REPEAT Flag ← True OUTPUT "How many ",TicketDecription[Type], " tickets" INPUT NumberOfTickets[Type] IF Type = 2 THEN IF NumberOfTickets[2] > 2 * NumberOfTickets[1] THEN Flag ← FALSE OUTPUT "Too many children" ENDIF ENDIF UNTIL NumberOfTickets[Type] >= 0 AND Flag TotalCost ← TotalCost + TicketPrice[Type] * NumberOfTickets[Type]</pre>	

https://xtremepape.rs/

Question	Answer	Marks
1(d)	TotalPeople ← TotalPeople + NumberOfTickets[Type]	
	NEXT Type	
	OUTPUT "Do you want a family ticket? Y/N"	
	INPOL FAMILLY	
	THEN THEN	
	OUTPUT "How many?"	
	INPUT NumberOfTickets[4]	
	TotalCost	
	TotalPeople	
	ENDIF	
	OUTPUT "Do you want a group ticket? Y/N"	
	INPUT Group	
	IF Group = "Y"	
	THEN	
	OUTPUT "How many people in the group?"	
	INPOT NUMBEROITICKEUS[5]	
	TotalCost TotalCost + TicketPrice[5] ^ NumberOfTickets[5]	
	'l'otalPeople ← 'l'otalPeople + NumberOf'l'ickets[5] ENDIF	
	OUTPUT "How many people would like to see the lion feeding?"	
	INPUT LionFeedingNumber	
	IF TotalPeople >= LionFeedingNumber	
	THEN TotalCost	
	ENDIF	
	OUTUT "How many people would like to see the penguin feeding?"	
	INPUT PenguinFeedingNumber	
	IF TotalPeople >= PenguinFeedingNumber	
	THEN TotalCost	
	UNTIL TotalPeople >= PenguinFeedingNumber AND TotalPeople >= LionFeedingNumber	

Question	Answer	Marks
1(e)	 Explanation One mark per mark point, max three MP1 use of selection (or any other method) to identify bookings with 2 or more adults and/or seniors and 2 (allow 3) or more children MP2 calculating new price including family ticket(s) for booking / tickets sold MP3 use of condition to compare price of family ticket(s) to price of ordinary tickets / group ticket(s) MP4 identifying best value / lowest cost 	3

Question	Answer						
	Section B						
2(a)	<pre>One mark per mark point, max three line 8 / PassCheck ← TRUE correction PassCheck ← FALSE line 12 / IF Password <> Password correction IF Password2 <> Password // IF Password <> Password2 line 18 / UNTIL PassCheck OR Attempt <> 3 correction UNTIL PassCheck OR Attempt = 3 / UNTIL PassCheck OR Attempt >= 3</pre>	3					
2(b)	One mark check, one mark matching description, max four Check: validation // length check Description length check // checks number of characters in password Check: verification // double entry Description double entry // comparison that two inputs are the same	4					
2(c)	One mark per set, one mark matching reason, max fourSet 1 -any appropriate example e.g. "small"Reasonmust follow through from the password given e.g. abnormal data will be rejectedSet 2 -any different appropriate example e.g. "password" and "password"Reasonmust be different and follow through from the password given e.g. normal data will be accepted	4					

Question	Answer	Marks
3(a)	 One mark per mark point, max two a list / one column of items of the same data type stored under a single identifier with a single index to identify each element One mark for an example of a declaration example e.g. DECLARE MyArray[1:10] OF INTEGER 	3

Question	Answer	Marks
3(b)	 One mark per mark point, max two using a counter to index the array so that the same code can be repeatedly used to check every element // every element can be checked in a loop 	2

Question	Answer									Marks
4(a)	One mark for each correct column								1	7
		Counter	Hot	Cold	Serve	Temp	Error	OUTPUT		
		0	0	0	0					
		1			1	75				
		2			2	78				
		3			3	84				
		4	1			87		Too Hot		
		5	2			91		Too Hot		
		6			4	80				
		7			5	75				
		8			6	70				
		9			7	65				
		10		1		62		Too Cold		
						-1	30	30		

Question		Answer	Marks
4(b)	•	include a message to explain the value output / e. g. "The percentage of meals not served" // outputting Hot, Cold and Serve	1
4(c)	•	updating the Serve variable // Serve ← Serve + 1	1

Question			Answer			Marks		
5(a)	One mark per mark point, max four • correct rows Field and Table • correct row Show • correct Criteria for SingleUse or/and Uses • correct Criteria for StockLevel less than ReorderLevel							
	Field:	ItemNumber	Description	SingleUse	StockLevel			
	Table:	NURSE	NURSE	NURSE	NURSE			
	Sort:							
	Show:	Ø	Ø					
	Criteria:			True	<[ReorderLevel]			
	or:							
	Or							
	Field:	ItemNumber	Description	Uses	StockLevel			
	Table:	NURSE	NURSE	NURSE	NURSE			
	Sort:							
	Show:	Ø						
	Criteria:			= 1	<[ReorderLevel]			
	or:							
5(b)	the field Uses already s	hows this information	// duplication of data	// redundant data		1
