CAMBRIDGE INTERNATIONAL EXAMINATIONS

GCE Ordinary Level

MARK SCHEME for the October/November 2012 series

6065 FOOD AND NUTRITION

6065/11 Paper 1 (Theory), maximum raw mark 100

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge will not enter into discussions about these mark schemes.

Cambridge is publishing the mark schemes for the October/November 2012 series for most IGCSE, GCE Advanced Level and Advanced Subsidiary Level components and some Ordinary Level components.

Pa	ge 2	N	lark Scheme	Syllabus	Paper
	J -		- October/November 2012	6065	11
1 (a)	growth maintena energy	s of protein ance/repair es/antibodies/enzym	noc.		
	3 x 1 ma	•			[3]
(b)		<u>s in protein</u> - hydrogen – oxyger	n – nitrogen		
	4 points:	2 points = 1 mark			[2]
(c)		tein all indispensable a ate amounts/in corr			
	2 points:	2 points = 1 mark			[1]
(d)		of HBV protein ish – milk – cheese	– eggs – soya		
	4 points:	2 points = 1 mark			[2]
(e)	LBV prot lacks at I	<u>tein</u> least one indispens	able amino-acid		[1]
(f)	cereals (<u>of LBV protein</u> or max. 2 named e. e.g.) – gelatine	g.)/bread – pulses (or max. 2 na	amed e.g.) – nuts	(or max. 2
	4 points:	2 points = 1 mark			[2]
(g)	2 protein		ther – LBV + LBV – LBV + HBV d – is made up by the other	/	
	4 points:	2 points = 1 mark			[2]
(h)		es of complementary n toast – lentil soup	<u>/ proteins</u> and bread – dhall and rice – eg	gs on toast – chee	ese sandwich

[1]

2 points: 2 points = 1 mark

Page 3	Mark Scheme	Syllabus	Paper
	GCE O LEVEL – October/November 2012	6065	11

2 (a) <u>Digestion and absorption of protein</u>

in the stomach – rennin – clots milk – in small children – pepsin – in presence of acid/HC \it{l} – converts protein to peptones/peptides/polypeptides – in the duodenum – enterokinase – in pancreatic juice – converts trypsinogen to trypsin – converts protein to peptones/peptides/polypeptides – in the ileum – erepsin – from intestinal juice – converts proteins to amino-acids – absorbed in villi – into blood capillaries – then into circulatory system – to liver

(must be at least 2 points on absorption) 12 points: 2 points = 1 mark

[6]

(b) Deamination

nitrogen removed – in liver – produces ammonia – toxic – excreted as urea –in urine– via kidneys – remainder is oxidised for energy – or converted to fat

4 points: 2 points = 1 mark

[2]

3 (a) Importance of calcium

building bones/teeth maintaining bones/teeth clotting blood muscle function nerve function

4 points: 2 points = 1 mark

[2]

(b) Sources of calcium

milk – cheese – yoghurt

bones of canned (or 1 named e.g.) sardines, pilchards, salmon etc. green vegetables (or 1 named e.g.) spinach, cabbage, Brussels sprouts, lettuce etc. bread – white flour (by law) – soya etc.

4 points: 2 points = 1 mark

[2]

(c) Deficiency disease

Rickets/osteomalacia/osteoporosis

[1]

(d) Symptoms

Rickets leg bones deformed – bow legs – knock knees – pigeon chest

Osteomalacia soft bones – break easily Osteoporosis porous bones – break easily

2 points: 2 points = 1 mark

[1]

Page 4	Mark Scheme	Syllabus	Paper
	GCE O LEVEL – October/November 2012	6065	11

(e) Importance of vitamin D

absorption of calcium – and phosphorus formation of bones/teeth maintenance of bones/teeth

4 points: 2 points = 1 mark

[2]

(f) Sources of vitamin D

milk – cheese – eggs – red meat (or named e.g.) – liver oily fish (or named e.g.) – butter – margarine – cod liver oil UV rays from the sun/sunlight

4 points: 2 points = 1 mark

[2]

(g) Importance of iodine

makes hormone – thyroxine – in thyroid gland – controls rate at which energy is used/controls rate of metabolism

4 points: 2 points = 1 mark

[2]

(h) Deficiency of iodine

goitre

swelling of thyroid gland/base of the neck

2 points = 1 mark [1]

4 Ways of encouraging good eating habits in children

eat meals with rest of the family – do not allow to leave the table

cut food if necessary to encourage independence

small portions – to encourage to eat everything – regular mealtimes – importance of breakfast – no snacking between meals

do not use sweets as a reward

serve food attractively – easy to eat – no strong flavours – variety of foods – introduce new foods – variety of colours – variety of flavours – variety of textures avoid sweet drinks before meals – water to drink with meals include fresh fruit and vegetables

10 points: 2 points = 1 mark

[5]

[Section A Total: 40]

Page 5	Mark Scheme	Syllabus	Paper
	GCE O LEVEL – October/November 2012	6065	11

5 (a) Coagulation

heat on protein – begins at 60 °C – cannot be reversed

hardens/sets - chemical structure changes

overheating causes protein to shrink – e.g. syneresis when scrambled egg is overcooked or baked egg custard in overcooked

e.g. boiled egg, baked egg custard, quiche, baked bread, skin on boiled milk, coating on fried fish

6 points (must include **one** example): 2 points = 1 mark

[3]

(b) Fermentation

Yeast – produces carbon dioxide – and alcohol – with food/sugar – and moisture / warmth / time

enzymes bring about fermentation process

amylase – changes starch to maltose

maltase - changes maltose to glucose

zymase – changes glucose to carbon dioxide and alcohol

e.g. bread making

6 points (must include **one** example): 2 points = 1 mark

[3]

(c) Gelatinisation

moist – heat – on starch – grains soften – swell / absorb water Some rupture – releasing starch granules – liquid thickens – irreversible e.g. roux sauce, custard, boiled rice

6 points (must include **one** example): 2 points = 1 mark

[3]

(d) Hydrogenation

makes fat solid – from liquid oil – unsaturated fats – become saturated fats – can take up hydrogen – breaks double bond – using a nickel catalyst – can stop at any time to achieve degree of hardness required – hard margarine more saturated – soft/spreading margarine less saturated e.g. margarine, cooking fats

6 points (must include **one** example): 2 points = 1 mark

[3]

(e) Pasteurisation

heat – destroys harmful bacteria / souring bacteria – lasts longer but does not prevent decay 72 °C/162 °F – for 15 seconds **or**

 $62 \,^{\circ}\text{C} - 65 \,^{\circ}\text{C}/145 \,^{\circ}\text{F}$ for $30 \, \text{minutes}$

rapid cooling – to prevent bacterial growth – little change to nutritive value – e.g. milk

6 points (must include **one** example): 2 points = 1 mark

[3]

Page 6	Mark Scheme	Syllabus	Paper
	GCE O LEVEL – October/November 2012	6065	11

6 (a) Nutrients in fruit

carbohydrate/sugar bananas, grapes, mango, pears

dried figs, dates, sultanas

fat avocado pear

vitamin A/carotene apricots, mango, melon, peaches

vitamin C/Ascorbic acid oranges, lemons, blackcurrants, grapes, strawberries

vitamin B/nicotinic acid avocado pear, dried apricots, dates, figs calcium blackcurrants, oranges, dried apricots, figs avocado pear, dried apricots, dried fogs

5 nutrients + 5 suitable named examples

10 points: 2 points = 1 mark [5]

(b) Ways of using fruit in family meals

as a drink orange juice, banana smoothie in ice cream lemon sorbet, strawberry apple pie, rhubarb crumble

cold dessert lemon meringue pie, fruit salad, fruit fool

scones apple, sultanas, cherries

cakes cherry, pineapple upside down, sultanas accompaniment apple sauce <u>with</u> pork, pineapple <u>with</u> ham

snack apple, banana, grapes

preserves raspberry jam, marmalade, lemon curd

main dish curry, sweet and sour chicken decoration/garnish lemon wedges, glace cherries

5 uses + 5 suitable named examples (without repetition)

10 points: 2 points = 1 mark [5]

(c) Other reasons for including fruit in the diet

high water content - refreshing

quick snack / easy to carry / little or no preparation required

can eat raw or cooked - good source of NSP

filling if on weight-reducing diet

for efficient working of the digestive tract

variety of colour / variety of flavour / variety of texture

many ways of serving – can be preserved at home

can be grown at home – cheap when in season

easily available

attractive shapes and appearance - make meals attractive

canned fruit often cheaper than fresh – e.g. peaches, pineapples

can be stored at home - used in emergencies

can prevent deficiency diseases (named e.g.) – antioxidants

reduce cholesterol

10 points: 2 points = 1 mark [5]

Page 7	Mark Scheme	Syllabus	Paper
	GCE O LEVEL – October/November 2012	6065	11

7 (a) Preparing, cooking and serving green vegetables to conserve vitamin C

tear rather than cut - follows cell wall - contents of cell do not leach out

large pieces - less damage to cells

sharp knife - less damage to cell walls - less mixing of ascorbase and ascorbic acid prepare just before cooking – prevent oxidation of vitamin C

do not soak - vitamin C is water soluble

boil water first

add small amounts of vegetable at a time - to keep water close to boiling point bring back to boil before adding more vegetable – destroy ascorbase lid on pan – prevent loss of steam – cooks quicker – vitamin C destroyed by heat no bicarbonate of soda – alkali, and vit. C is acidic – will neutralise serve immediately

do not keep hot

use cooking water for sauce or gravy – to gain vitamin C dissolved in water

10 points: 2 points = 1 mark

[5]

(b) Advantages and disadvantages of frying

Advantages

quick method of cooking - crisp surface deep frying gives even colour to foods - food browns flavour developed – appetising smell different types of frying

Disadvantages

adds fat to product / increases calorific value of food need constant attention during cooking / can be a dangerous process can be expensive to buy enough fat/oil to fill pan cannot cook large amounts at once unhealthy method of cooking - fried food can be difficult to digest - linked to CHD/obesity can be difficult to judge temperature of fat/oil needs skill for successful results

(At least 2 points from each area) 10 points: 2 points = 1 mark

[5]

Page 8	Mark Scheme	Syllabus	Paper
	GCE O LEVEL – October/November 2012	6065	11

(c) Saving time when preparing and cooking family meals

collect equipment and ingredients required before starting to cook read recipe carefully / wastes time constantly referring to books use some raw dishes/courses make use of electrical equipment save cooking time – example of equipment frying and grilling are quick methods of cooking make use of convenience foods – e.g. frozen puff pastry prepare and cook food in bulk – freeze some make stew and casseroles – require little attention – fewer pans to wash do not peel vegetables – scrub to remove soil cook and serve in same dish cook when required – no time spent on re-heating one stage method of making rich cakes cut potatoes etc. into small pieces to cook quicker lids on pans to cook quicker

10 points: 2 points = 1 mark [5]

[Section B Total: 45]

Page 9	Mark Scheme	Syllabus	Paper
	GCE O LEVEL – October/November 2012	6065	11

8 (a) Discuss ways of preventing food spoilage when preparing, cooking and storing food.

[15]

The answer may include the following knowledge and understanding:

<u>Conditions for growth of bacteria</u> (also consider yeast / moulds) warmth – moisture – food – time – suitable pH – some require oxygen

Symptoms of food poisoning – (Can be caused by food spoilage)

vomiting – diarrhoea – headache – tiredness/exhaustion – abdominal pain – fever– double vision – can be fatal

Preparing food

wash hands – after toilet/raw meat/vegetables with soil – avoid cross-contamination – no coughing/sneezing over food – do not cook if ill – so bacteria are not passed to others – tie back/cover long hair – bacteria from hair could get into food – no long fingernails – dirt and bacteria collect underneath

clean apron – no outdoor clothes – avoid transfer of bacteria from outside

do not touch face during food preparation – handle food as little as possible – cover cuts with waterproof dressings – bacteria will be on skin – no licking spoons/fingers – bacteria from mouth transferred to food

separate chopping board/knife for raw and cooked food

equipment clean – work surfaces clean – wash up in hot soapy water – clean tea towel/allow to dry in air

no animals in kitchen

Cooking food

thoroughly cook foods – especially meat/eggs – should reach 72 °C in centre – maintain for 2 minutes – to kill bacteria – e.g. Salmonella – do not keep warm – re-infected with bacteria from air

know source of food – danger of BSE etc. – clean water supply

should reheat until piping hot – use food probe

do not reheat after 24 hours – only reheat once cook just before eating if possible – serve immediately

do not use raw eggs if possible – in mayonnaise/marzipan – danger of Salmonella – do not use cracked eggs – etc.

Page 10	Mark Scheme	Syllabus	Paper
	GCE O LEVEL – October/November 2012	6065	11

Storing food

clean containers – cool place/refrigerator – covered especially high risk foods – e.g. meat/fish/milk/eggs to prevent cross contamination – use in rotation / check 'use by' dates cool leftover food rapidly – use within 24 hours keep raw and cooked food separate – raw meat at bottom of refrigerator weevils/rats/mice etc. – grain off floor – dry place prevent multiplication of bacteria – check cans for bulges – indicates seal has been damaged and bacteria entered – food still spoils in refrigerator do not thaw then refreeze food – bacteria will have multiplied in warmth – bacteria dormant in freezer

8	(a) <u>Ba</u>	and	<u>Descriptor</u>	Part mark	<u>Total</u>
	Hiç	igh	Can identify conditions for bacterial/yeast/mould growth Some symptoms of food poisoning may be identified Is able to identify and discuss several points on preventing spread of bacteria during preparing, cooking and storing food Gives examples to illustrate points made Understanding of the topic is apparent Information is specific and generally accurate All areas of question addressed Answers are detailed where appropriate Some scientific facts included	11–15	15
	Mi	iddle	Some conditions for bacterial/yeast/mould growth given May give some symptoms of food poisoning Is able to identify several points on preventing the spread of bacteria during preparing, cooking and storing food Some discussion or explanations given Gives a few examples to illustrate points made Shows a basic understanding of the topic Information is basic but generally accurate Some areas of question addressed more fully Gaps in knowledge will be apparent May be a few scientific facts Answer will be detailed in parts and superficial in others Overall lack of detail	6–10	
	Lo	DW	May give conditions for bacterial/yeast/mould growth Little information on food poisoning Mentions some points on preventing spread of bacteria during preparing, cooking and storing May give examples to illustrate Answer tends to be a list of statements Not always accurate Information is brief Answers not specific Little or no scientific information Emphasis on one part of the question	0–5	

Lack of knowledge will be apparent

Page 11	Mark Scheme	Syllabus	Paper
	GCE O LEVEL – October/November 2012	6065	11

8 (b) Identify and give examples of different raising agents. Discuss their use in the preparation of meals.
[15]

The answer may include the following knowledge and understanding:

Principles of raising agents

gases expand when heated – mixture enlarges – steam has a larger volume than water hot gases rise

heat sets risen shape – protein in ingredients coagulates – e.g. egg, gluten in flour

<u>Air</u>

gives a light texture – no change in colour – or flavour must be introduced before cooking – expands on heating sieving flour – air trapped between grains of flour creaming fat and sugar – traps air as tiny bubbles rubbing-in fat and flour – air trapped as mixture falls whisking egg white – ovalbumin stretches – entangles 7 x own volume of air whisking whole egg and sugar – traps less air – due to fat in egg yolk used in cakes e.g. Swiss roll folding and rolling – flaky pastry/puff pastry – air trapped between layers – sealed to prevent air loss – expands on heating – pushes layers apart

Carbon dioxide

bicarbonate of soda – with moist heat gives off carbon dioxide – residue of sodium carbonate – yellow colour – bitter flavour – used in dishes where this would be hidden – e.g. gingerbread etc.

bicarbonate of soda and cream of tartar – with moist heat gives off carbon dioxide – colourless and tasteless residue – Rochelle salt – e.g. scones etc.

bicarbonate of soda and sour milk – as above – acid + alkali

baking powder – contains correct proportion of bicarbonate of soda and cream of tartar – e.g. suet pastry, scones, cakes

self-raising flour – plain flour + baking powder

yeast – feeds on sugar – moisture – warmth – ferments sugar – produces alcohol – and carbon dioxide – continues to produce under favourable conditions – heat of oven kills yeast – fermentation stops – e.g. bread etc.

Steam/Water vapour

used in mixtures with a high proportion of liquid e.g. choux pastry, Yorkshire puddings etc. hot oven – water changes to steam

Page 12	Mark Scheme	Syllabus	Paper
	GCE O LEVEL – October/November 2012	6065	11

8 (b) Band Descriptor

High Able to name all gases

Part marks To

Demonstrates a clear understanding of how

gases are introduced

Candidate can state clearly how raising occurs and how

shape is set

Gives example to illustrate points made Understanding of the topic is apparent

Information is specific and generally accurate

All areas of question addressed

Answers are detailed where appropriate

Some scientific facts included

Middle Can name at least 2 gases.

6-10

Can give a few examples of how gases are introduced

Factual information is sound but not always linked to specific

examples to illustrate

Gives a few examples to illustrate points made Shows a basic understanding of the topic Information is basic but generally accurate Some areas of question addressed more fully

Gaps in knowledge will be apparent

May be a few scientific facts

Answer will be detailed in parts and superficial in others

Overall lack of detail

Low Can give 1 or 2 examples of gases

0-5

Action of gases may be considered in simple terms.

May give examples to illustrate

Answer tends to be a list of statements

Not always accurate Information is brief Answers not specific

Little or no scientific information Emphasis on one part of the question

Lack of knowledge will be apparent
