

**CAMBRIDGE INTERNATIONAL EXAMINATIONS**

Cambridge Ordinary Level

## **MARK SCHEME for the October/November 2015 series**

### **5054 PHYSICS**

**5054/31**

Paper 3 (Practical Test), maximum raw mark 30

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge will not enter into discussions about these mark schemes.

Cambridge is publishing the mark schemes for the October/November 2015 series for most Cambridge IGCSE<sup>®</sup>, Cambridge International A and AS Level components and some Cambridge O Level components.

© IGCSE is the registered trademark of Cambridge International Examinations.

Page 2	Mark Scheme	Syllabus	Paper
	Cambridge O Level – October/November 2015	5054	31

- 1 (a) Each  $l$  measured to the nearest mm or better with unit and the average value found and in range 1.5 cm to 3.0 cm. B1
- (b)  $l_A$  and  $l_B$  measured to the nearest mm or better with unit. B1
- $l_B < l_A$ . B1
- (c) (i) Correct calculation of extensions with unit. Allow use of average or individual initial lengths. M1
- (ii) Correct calculation of forces with unit with  $F_A > 1.0\text{ N}$ . A1
- [5]
- 2 (a)  $\theta_1 \leq 15^\circ\text{C}$  recorded with unit. B1
- Sensible  $\theta_R$  and  $\theta_H$  and  $\theta_H$  in the range  $\theta_{AVE} \pm 3^\circ\text{C}$  with units. B1
- (b) The warmer water is at the top /the colder water is at the base of the cylinder and will not mix by convection. B1
- Average temperature found correctly. M1
- Reason related to comment, e.g.  
 For  $\theta_H < \theta_{AVE}$ , not true because heat is gained by the cold **cylinder**.  
 For  $\theta_H < \theta_{AVE}$ , not true because some ice is transferred with the cold water  
 For  $\theta_H > \theta_{AVE}$  not true because heat is gained from the surroundings.  
 For  $\theta_H = \theta_{AVE}$  true because heat gained = heat lost.  
 Allow any other correct physics suggestion but do not allow heat lost to the surroundings because the surroundings are at a lower temperature. A1
- [5]

	Cambridge O Level – October/November 2015	5054	31

- 3 (a) No mark for length.  
 $t_1$  in the range 27 s to 37 s from repeat measurements with unit seen here or in (b). (Allow measurements to nearest second) B1  
 $T_1$  in the range 1.50 to 1.70 s with unit seen here or in (b). B1
- (b)  $t_2$  slightly smaller than part (a) to 0.1 s or better with unit seen here or in (a) and  $T_2$  correct. (Penalise missing unit once only) B1
- (c) Sensible comment based on the candidate's results, e.g. the periods of oscillation are virtually the same /  $T_2$  is slightly smaller than  $T_1$  / difference is small. B1  
Sensible comment based on the candidate's results, e.g. it is not possible for it to be directly proportional because as the length halves it would be expected that the period halved. B1
- [5]

#### 4 Preliminary results

- (a) (i)  $V_{AB}$  recorded to 0.1 V or better with unit and in the range 0.5 V to 1.8 V. B1  
(ii)  $V_{BC}$  recorded to 0.1 V or better with unit and in the range 0.5 V to 1.8 V. B1  
(iii) Correct calculation of  $I$  with unit and in the range 0.10 A to 0.40 A. B1
- [3]

#### Table

- (b) Table with units for all columns with results from (a) included in the table. B1  
All  $R$  values correct. (4.7, 10, 22, 36.7, 3.2, and one of 14.7, 26.7 or 32  $\Omega$ ). B1  
Correct trend in  $V_{AB}$  for correct  $R$  values ( $V_{AB}$  decreases as  $R$  increases). B1  
Correct trend in  $V_{BC}$  for correct  $R$  values ( $V_{BC}$  increases as  $R$  increases). B1  
Correct calculation of  $I$  (Check  $R = 22 \Omega$ ). B1
- [5]

	Cambridge O Level – October/November 2015	5054	31

### Graph

- (c) Axes labelled with units for  $I$  and  $V$  and correct orientation. B1
- Suitable scale, not based on 3, 6, 7 etc. with data occupying more than half the page in both directions. (Allow the graph to start at the origin). B1
- Two points plotted correctly – check the two points furthest from the line. This mark can only be scored if the scale is easy to follow. (Points must be within 1/2 small square of the correct position) B1
- [3]**
- Correct box ticked based on the best fit to the plotted points. B1
- Best fit fine line and fine points or crosses.  
(Line thickness to be no greater than the thickest lines on the grid) B1
- [2]**

### Calculations

- (d) Correct reading of  $I$  at a voltage of 1.50 V. M1
- Correct calculation of resistance in the range  $2 \Omega$  to  $15 \Omega$  to 2/3 s.f. and unit. A1
- [2]**
