assessing

Module FP1: Further Pure Mathematics 1

[AMF11]

FRIDAY 20 JANUARY, AFTERNOON

INSTRUCTIONS TO CANDIDATES

Write your Centre Number and Candidate Number on the Answer Booklet provided.
Answer **all six** questions.
Show clearly the full development of your answers.
Answers should be given to three significant figures unless otherwise stated.
You are permitted to use a graphic or a scientific calculator in this paper.

INFORMATION FOR CANDIDATES

The total mark for this paper is 75
Figures in brackets printed down the right-hand side of pages indicate the marks awarded to each question or part question.
A copy of the **Mathematical Formulae and Tables booklet** is provided.
Throughout the paper the logarithmic notation used is $\ln z$ where it is noted that $\ln z \equiv \log_e z$

7124

Answer all six questions.

Show clearly the full development of your answers.

Answers should be given to three significant figures unless otherwise stated.

1   Let $\mathbf{M} = \begin{pmatrix} 2 & -1 \\ 3 & 0 \end{pmatrix}$ and $\mathbf{I} = \begin{pmatrix} 1 & 0 \\ 0 & 1 \end{pmatrix}$

     (i)   Show that $\mathbf{M}^2 = 2\mathbf{M} - 3\mathbf{I}$ [4]

     (ii)   Hence, or otherwise, express the matrix $\mathbf{M}^3$ in the form $\alpha\mathbf{M} + \beta\mathbf{I}$, where α and β are integers.   [4]

2   The matrix $\mathbf{M}$ is given by

$$\begin{pmatrix} 7 & 3 \\ 3 & -1 \end{pmatrix}$$

     (i)   Show that the two eigenvalues of $\mathbf{M}$ are 8 and -2 [5]

     (ii)   For each eigenvalue find a corresponding unit eigenvector.   [7]

     $\mathbf{P}$ is a 2×2 matrix such that

$$\mathbf{P}^{-1}\mathbf{MP} = \mathbf{D}$$

     where $\mathbf{D}$ is a diagonal matrix.

     (iii) Write down a possible matrix $\mathbf{P}$.   [1]

3 A binary operation $*$ is defined for all real numbers a and b.
The operation is given as

$$a * b = a + b - 7$$

(i) Show that $*$ is associative. [4]

(ii) Find the identity element. [3]

(iii) Find the inverse of the element a. [3]

(iv) Determine whether the set of all real numbers forms a group under the operation $*$
Give clear reasons for your answer. [2]

4 (a) (i) The shear represented by the matrix **S** maps the points $(3, 4)$ and $(7, 1)$ onto
$(10, -3)$ and $(15, -7)$ respectively.
Find the matrix **S**. [5]

(ii) The shear represented by the matrix **S** maps a region P of area $12\,\text{cm}^2$ to a new
region Q.
Find the area of Q. [3]

(b) (i) Describe the difference between an invariant line and a line of invariant points
under a linear transformation. [2]

(ii) The line $y = mx$ is a line of invariant points under the transformation represented
by the matrix

$$\begin{pmatrix} 2 & 2 \\ 1 & 3 \end{pmatrix}$$

Find the value of m. [5]

5 The equation of a circle is given by

$$x^2 + y^2 - 2x - 4y = 0$$

(i) Find the equation of the tangent to the circle at the point (3, 3). [6]

(ii) Verify that this tangent passes through the point (1, 7). [1]

(iii) Hence, or otherwise, find the equation of the other tangent to the circle from the point (1, 7). [5]

6 (a) Find all real values of a and b such that

$$(a + bi)^2 = -16 - 30i$$ [8]

(b) (i) Sketch on an Argand diagram the locus of those points z which satisfy

$$|z - (2 + 4i)| = \sqrt{5}$$ [3]

(ii) Hence, or otherwise, find the maximum value of $|z|$ for any point z which lies on this locus. [4]
