Edexcel and BTEC Qualifications

Edexcel and BTEC qualifications come from Pearson, the UK's largest awarding body. We provide a wide range of qualifications including academic, vocational, occupational and specific programmes for employers. For further information visit our qualifications websites at <u>www.edexcel.com</u> or <u>www.btec.co.uk</u>.

Alternatively, you can get in touch with us using the details on our contact us page at <u>www.edexcel.com/contactus</u>.

Giving you insight to inform next steps

ResultsPlus is Pearson's free online service giving instant and detailed analysis of your students' exam results.

- See students' scores for every exam question.
- Understand how your students' performance compares with class and national averages.
- Identify potential topics, skills and types of question where students may need to develop their learning further.

For more information on ResultsPlus, or to log in, visit<u>www.edexcel.com/resultsplus</u>. Your exams officer will be able to set up your ResultsPlus account in minutes via Edexcel Online.

Pearson: helping people progress, everywhere

Pearson aspires to be the world's leading learning company. Our aim is to help everyone progress in their lives through education. We believe in every kind of learning, for all kinds of people, wherever they are in the world. We've been involved in education for over 150 years, and by working across 70 countries, in 100 languages, we have built an international reputation for our commitment to high standards and raising achievement through innovation in education. Find out more about how we can help you and your students at: www.pearson.com/uk.

Introduction

This was the first sitting of the WAC12 paper, testing the new specification. The new paper included two compulsory questions in Section A, replacing the choice of two questions from three. The format for Section B remained the same, with a choice of three questions from four. The overall results were mixed. Some areas of the specification have been learnt well, and as result, marks here were good. Candidates did not mark very well in evaluation parts of questions, which have now changed to a levels based mark scheme. Many candidates continued to answer in a bullet point style, which meant achieving the higher levels on the mark scheme was difficult.

This question was answered very well, as candidates had clearly learnt how to produce a statement of comprehensive income (SOCI), with good marks on (a)(i). Most of the items were classified in the correct section, and many of the additional information items were treated properly. Answers for (a)(ii), the statement of financial position were quite good, with the majority of candidates achieving over half of the marks available. Candidates did not do very well in (b), with few managing to achieve Level 3 or Level 4 answers. Centres need to be aware that the specification in this area has broadened, not just concentrating on the Auditors Report. The specification now looks at the role of the auditor including the role of the auditor in corporate governance.

Common errors:

Use of "old" terminology such as sales, fixed assets, long-term liabilities, stock, debtors, and creditors, instead of IAS terms.

Calculating the depreciation of the factory buildings by taking 2% of the carrying value, rather than working back to find the cost price, and then finding 2% of this.

Incorrectly taking 2% of the trade receivables figure, and using this in the SOCI, instead of just the increase in allowance for doubtful debts.

Not taking account of the balance on retained earnings, or realising it was a debit balance.

Incorrectly including the bank loan under non-current liabilities, despite information stating it is repayable in December 2017.

In (b), concluding by stating that the Auditors Report was important, instead of addressing the question which was about the importance of the role of the auditor in a company.

This response achieved a top of Level 3 band, achieving 9 out of 12 marks.

SECTION A

Answer BOTH questions in this section.

Source material for Question 1 is on pages 2 to 4 of the source booklet.

- 1 (a) Prepare, in accordance with International Accounting Standard (IAS) 1, a:

(12)

Good general introduction into the role of the auditor.

Line 5 "role" should be "duty". Points made about the Auditors Report were valid, and it was good that they were kept together. In points against, "conflict of interest" needs explaining.

The last two sentences in points against could be linked together to highlight developing a point made.

Good conclusion, which related to the question set.

In order to develop, for example, "chains of reasoning", keep all statements made about one point together. Ideally, there will be a logical progression from one statement to the next. When concluding, look back at what the question was asking, and use this as the basis for the conclusion/evaluation, giving the most important point for the decision made.

This compulsory question was found difficult by many candidates and the marks attained were not very good. Part (a) was answered well and scores were high. The production budget for (b)(i) was answered quite well, but (b)(ii) candidates found difficult. Candidates often adopted a difficult approach to (c), taking 5% of each continents production, instead of the total production. Whilst this would have arrived at the same answer, the volume of calculations required meant an error was often made. Answers to (d) were weak, with candidates having to use production figures from (b)(i), which often proved too difficult. Part (e) was not answered well, although some candidates successfully calculated amounts for Option 1 and Option 2. The calculations for Option 3 were found more challenging by candidates. The evaluations of the payment options in (f) were reasonable, as advantages and disadvantages were discussed and a preferred option selected.

Common errors:

Confusion over delivery times resulted in figures being in the wrong column in (b)(i).

Assuming, in (b)(ii), that 500 cars per continent were going into inventory.

Not using own figures from (b)(i) to calculate the purchases budget in (d).

Unable to separate deposits from monthly payments in Option 3, and arriving at an incorrect figure.

This was a popular question in section B, and marks were reasonably good. Many candidates had clearly learnt the structure of the statement of cash flows, and were able to apply this knowledge to the question. Candidates did not achieve marks where they were caught out by the detail of the question, for example the interest paid on the debenture. Answers to (b) were often good, with candidates working out the current ratio and the acid test ratio for both years. Whilst there were arguments for and against the company handling liquidity well, candidates should have mentioned the cash and cash equivalent balances for the two years.

Common errors:

Confusion when calculating the depreciation figure, which was often incorrect.

Calculating the profit on the sale of the property incorrectly.

When a section of the statement showed an outflow, e.g. operating activities, the term "from" was given instead of "used in".

Not completing the final section of the statement, probably because the figure from the candidate's workings was not correct. However, the candidate should still have used the "beginning of the year" and the "end of the year" figures from the statement of financial position.

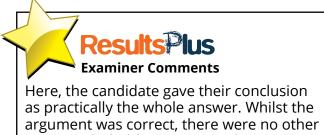

This was a Level 1 answer, achieving 2 marks.

3 (a) Prepare a Statement of Cash Flows for the year ended 31 March 2017 in accordance with International Accounting Standard (IAS) 7.

accordance with international Accounting Standard (IAS) 7.		(24)
Cash Flow from operating activities.

(b) Evaluate how well Kericho Builders plc has managed liquidity in the year ended 31 March 2017.

In March 2016 the cash and cash equivalents of the
business was filooo but at the end of the year it was nil
in the current assets. However, as there was no short term
borrowings such as bank overdraft at the begining, in the
end there was an overdraft of £1000 which means.
the kericho Builder Plc has managed liquidity but
not so well in the year end.

points included for or against the argument.

(6)

This question on project appraisal was a popular question in section B, and marks were fairly good. Section (a) was handled very easily, with many candidates obtaining full marks. In (b), revenue was calculated well, but costs proved difficult. Many candidates omitted the depreciation and/or the interest charged. When calculating the average rate of return, profit is used, so the correct labels would have been revenue or income and expenses or costs, rather than cash inflow and cash outflow. However, candidates were awarded marks for the figures calculated, even if the headings were not strictly correct. The evaluation in (c) was often handled quite well, with candidates bringing in a range of points to be considered.

Common errors:

Did not notice that the operating costs were given per week, and not per year.

Omitting depreciation (or the cost of the project) from the calculations.

Did not include the interest charge in the costs section.

Incorrect formula applied when calculating the average rate of return (accounting rate of return).

This response achieved 6 out of 18 marks.

(b) Calculate the average rate of return (accounting rate of return) of the project.

Examiner Comments

The revenue (called cash inflow) was correct and scored 3 marks.

The costs (called cash outflow) failed to use figures for the year, using the weekly figures instead. Then 20% was deducted, a confused treatment of depreciation. No marks were awarded. No marks were awarded for the incorrect total figure, labelled net cash flow.

The annual profit was not calculated, no division by 5 was shown.

The ARR was awarded a generous 3 marks, using the own figure rule, despite not being expressed as a percentage.

Read the question carefully, to spot the costs were per week (this was stated twice). Learn formulas carefully.

This question was the least popular question on section B, and also the question with the lowest marks achieved. The Journal entries for (a) were disappointing, with many candidates giving a confused answer, often omitting the share premium. Most candidates left out the required transfer to the capital redemption reserve. Part (b) was better, with most marked well. The least successful answer was for (iv) where candidates worked with the £12 million share capital, omitting the redemption that took it down to £11 million. Part (c) was disappointing with answers often being irrelevant, wrong, or from the viewpoint of the shareholder. Although what is good for the shareholder is often good for the company, how this logic applies would have to be worked into the answer somehow.

Common errors:

Omission of share premium entry in the Journal in (a).

Did not show transfer to capital redemption reserve in (a).

In (b) multiplying 1.1 pence by £12 million instead of £11 million which was now the value of share capital.

Thinking that the company could hold onto the shares they have redeemed, then sell them on at a profit. (They would be cancelled).

This was a Level 3 response and achieved 5 marks.

(c) Evaluate, from the point of view of Knightswell Hotels plc, the redemption of ordinary shares on 8 July 2016.

(6) Redumption of the protonony shine will reduce out Pow, He fibre as dividence. Now the Unidered payment will they live redeemed 1000000 shives. A50 it Beause brome to viduce shove haders easy in decrion making When take darions guickly, there there is a hige agh outflow from the business there in outflow of \$4000000. They can use fat other protrable unount for offer fran redecome sheres. HIS2 It muy be affect the business. reputation of A when company redien 1000000 be denotrated. They and tory may invest in the extential investors will conclude, redumption at ordnung shares is good. Sease reduc durdend payment and it lead to easy decision making? (Total for Question 5 = 30 marks)

Examiner Comments

The first point about future dividends being reduced was good. The second advantage concerning decision making was rather tenuous.

The two disadvantages stated were both valid points. A good conclusion, stating briefly the reasons for the decision.

Here, the candidate has read the question carefully, and answered from the viewpoint of the company. It is easy to stray and give answers from the view of the shareholder.

This was the most popular question in section B and marks were reasonable. Part (a) was often completed quite well, but candidates encountered problems with some of the detail. Calculating the quantity of the closing inventory and also the value of the inventory was found the most challenging. For part (b), some candidates had learnt some of the relevant points, but were not sure if they were an advantage or disadvantage, often putting them in the wrong place. The usual mix of answers were given for (c), with the better ones making a decision using marginal costing.

Common errors:

Calculating the quantity and value of the closing inventory incorrectly.

Mixing up the treatment of opening inventory (added to cost of sales) and closing inventory (deducted from cost of sales).

Did not use marginal costing to make a decision concerning the customer's offer.

This response was a Level 1 answer and achieved 1 mark.

- 6 (a) Prepare a Statement of Profit or Loss and Other Comprehensive Income for the year ended 30 April 2017, in **columnar format**, showing:
 - marginal costing inventory valuation.
 - · absorption costing inventory valuation.

	_			(18)

- (b) Explain to management:
 - (i) two advantages of valuing inventory using absorption costing

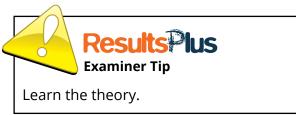

- It takes both the costs (variable and fired
costs) to value inventory. Bo better valuation of
inventory
-7
(ii) one disadvantage of valuing inventory using absorption costing.
(2)
Fime consuming and waste of energy. Because il-
should A take two costs. Fixed and variable.

(4)

In April 2017, a potential customer is interested in buying the product, but is only prepared to offer £30 per unit.

(c) Evaluate the offer of £30 per unit and advise Hercules Baggage Limited whether this offer should be accepted.

(6) This offer should not be accepted. Be cause the customer considered a very lower price rather than Hercules Baggage Limited price. (64-30) there is a big difference of 534. The If company sell thiese products to £30 then it is likely to get a very lower revenue. ? Moreover, this may leads to a difficulty in covening the costs Even in production there bra more enop is more expenses. So Hercoles Baggage limited needs a new boyer who buy the products arman in company's price or a price can thigh is closer to company's price. that company has considered. Examiner Comments There were one or two points that were correct, but not strongly connected to the question. No mention was made of marginal costing theory.

Paper Summary

Based on their performance on this paper, centres are offered the following advice:

- There is a clear benefit from showing all workings. If an error occurs early in the question, the candidate may not be awarded any marks for the figure calculated. However, if this figure is taken forward and treated correctly, the candidate will benefit from the "own figure" rule and achieve marks.
- The levels-based mark scheme will require candidates to adopt a different approach to the evaluation section of each question, especially in Section A. Previously, candidates could list a number of bullet points, often just one sentence. However, candidates are now advised to try to develop the point being made to a greater depth where possible. This will allow access to the higher levels on the mark scheme. For example, at Level 2, "chains of reasoning are present but may be incomplete or invalid". To move to Level 3 requires "developed chains of reasoning, showing causes and/or effects". Centres are advised to carefully study the requirements of the higher levels, and try to guide candidates to answer in a style that reflects these levels.
