**International Advanced Level**

**UNIT 4: Rates, Equilibria and Further Organic Chemistry**

**You must have:**

Scientific calculator, Data Booklet, ruler

Total Marks

## Instructions

- Use **black** ink or ball-point pen.
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Answer **all** questions.
- Answer the questions in the spaces provided – *there may be more space than you need.*
- Show all your working in calculations and include units where appropriate.

## Information

- The total mark for this paper is 90.
- The marks for **each** question are shown in brackets – *use this as a guide as to how much time to spend on each question.*
- In the question marked with an **asterisk** (\*), marks will be awarded for your ability to structure your answer logically, showing how the points that you make are related or follow on from each other where appropriate.
- A Periodic Table is printed on the back cover of this paper.

## Advice

- Read each question carefully before you start to answer it.
- Try to answer every question.
- Check your answers if you have time at the end.
- Good luck with your examination.

Pearson

## SECTION A

Answer ALL the questions in this section.

You should aim to spend no more than 20 minutes on this section.

For each question, select one answer from A to D and put a cross in the box .  
If you change your mind, put a line through the box  and then mark  
your new answer with a cross .

1 Which of these gases would have the greatest standard molar entropy?

- A NH<sub>3</sub>  
 B H<sub>2</sub>  
 C N<sub>2</sub>  
 D SO<sub>2</sub>

(Total for Question 1 = 1 mark)

2 What is the standard entropy change of the system, in J K<sup>-1</sup> mol<sup>-1</sup>, for the reaction between nitrogen and hydrogen to form ammonia?

	Standard molar entropy / J K <sup>-1</sup> mol <sup>-1</sup>
H <sub>2</sub>	130.6
N <sub>2</sub>	191.6
NH <sub>3</sub>	192.3

- A -198.8  
 B -129.9  
 C +129.9  
 D +198.8

(Total for Question 2 = 1 mark)

DO NOT WRITE IN THIS AREA

3 The enthalpy change of solution of sodium sulfate,  $\text{Na}_2\text{SO}_4$ , may be calculated using three pieces of data. Which of these pieces of data is **not** required?

- A lattice energy of  $\text{Na}_2\text{SO}_4$
- B enthalpy change of hydration of  $\text{Na}^+$
- C enthalpy change of formation of  $\text{Na}_2\text{SO}_4$
- D enthalpy change of hydration of  $\text{SO}_4^{2-}$

(Total for Question 3 = 1 mark)

Use this space for any rough working. Anything you write in this space will gain no credit.

4 A graph of pH against volume of acid added for an acid-base titration is shown.

(a) Which acidic solution was used in the titration?

(1)

- A  $0.1 \text{ mol dm}^{-3} \text{ CH}_3\text{COOH}$
- B  $1.0 \text{ mol dm}^{-3} \text{ CH}_3\text{COOH}$
- C  $0.1 \text{ mol dm}^{-3} \text{ HCl}$
- D  $1.0 \text{ mol dm}^{-3} \text{ HCl}$

(b) Which basic solution was used in the titration?

(1)

- A  $\text{NH}_3$
- B  $\text{LiOH}$
- C  $\text{Ba}(\text{OH})_2$
- D  $\text{NaOH}$

(c) A student suggested five indicators that might be used in this titration:

- thymol blue
- methyl orange
- bromophenol blue
- bromocresol green
- phenolphthalein

How many of these indicators would be suitable? Use your Data Booklet.

(1)

- A** 5
- B** 4
- C** 3
- D** 2

**(Total for Question 4 = 3 marks)**

**5** The halogenoalkane 2-bromo-2-methylbutane was hydrolysed with sodium hydroxide solution, NaOH(aq). Which suggestion about the mechanism of this reaction is correct?

	Type of mechanism	Number of steps in mechanism
<input type="checkbox"/> <b>A</b>	$S_N2$	one
<input type="checkbox"/> <b>B</b>	$S_N2$	two
<input type="checkbox"/> <b>C</b>	$S_N1$	one
<input type="checkbox"/> <b>D</b>	$S_N1$	two

**(Total for Question 5 = 1 mark)**

**Use this space for any rough working. Anything you write in this space will gain no credit.**

6 Nitrogen monoxide and hydrogen react together to form nitrogen and water.

The steps in the mechanism of the reaction are

Which statement about the reaction is correct?

- A Step 3 is the rate determining step and the overall order is 2
- B Step 3 is the rate determining step and the overall order is 4
- C Step 2 is the rate determining step and the overall order is 2
- D Step 2 is the rate determining step and the overall order is 3

(Total for Question 6 = 1 mark)

7 The Arrhenius equation can be shown as

$$\ln k = -\frac{E_a}{R} \times \frac{1}{T} + \text{constant}$$

A graph is plotted of  $\ln k$  against  $1/T$  for a reaction.  
The activation energy,  $E_a$ , of this reaction equals

- A  $-\text{gradient} \div R$
- B  $+\text{gradient} \div R$
- C  $-\text{gradient} \times R$
- D  $+\text{gradient} \times R$

(Total for Question 7 = 1 mark)

Use this space for any rough working. Anything you write in this space will gain no credit.

- 8 The compound menthol has the structure shown.  
Some of the carbon atoms are labelled P, Q, R and S.

- (a) What is the number of chiral centres in a molecule of menthol?

(1)

- A** 1
- B** 2
- C** 3
- D** 4

- (b) Which of the carbon atoms is responsible for a peak at 72 ppm in the  $^{13}\text{C}$  NMR spectrum of menthol?

(1)

- A** P
- B** Q
- C** R
- D** S

- (c) Four groups of students warmed samples of menthol with sodium dichromate(VI) in acid. They purified the reaction mixture and carried out a series of qualitative tests on the organic product.

The findings of each group in the class are shown in the table.

Group	Qualitative test		
	Add 2,4-dinitrophenylhydrazine	Warm with Fehling's solution	Add PCl <sub>5</sub>
One	✓	✗	✓
Two	✓	✗	✗
Three	✓	✓	✗
Four	✗	✗	✓

A tick (✓) shows a positive result, a cross (✗) shows a negative result.  
Which group recorded the results you would expect?

(1)

- A One
- B Two
- C Three
- D Four

(Total for Question 8 = 3 marks)

Use this space for any rough working. Anything you write in this space will gain no credit.

- 9 The substance known as PHBV is a biodegradable polymer formed from 3-hydroxybutanoic acid and 3-hydroxypentanoic acid.

3-hydroxybutanoic acid

3-hydroxypentanoic acid

- (a) Which of these is the repeat unit of the polymer?

(1)

- (b) What reaction occurs when PHBV biodegrades to its monomers?

(1)

- A** condensation  
 **B** hydrolysis  
 **C** hydration  
 **D** hydrogenation

(Total for Question 9 = 2 marks)

10 Which reagent reacts at room temperature with methylamine,  $\text{CH}_3\text{NH}_2$ , to form the compound N-methylethanamide?

- A  $\text{CH}_3\text{COCH}_3$
- B  $\text{CH}_3\text{COOH}$
- C  $\text{CH}_3\text{COOCH}_3$
- D  $\text{CH}_3\text{COCl}$

(Total for Question 10 = 1 mark)

11 This question is about chromatography.

- (a) A spot caused by an amino acid has moved 42 mm from the baseline of a paper chromatogram.  
The  $R_f$  value for the amino acid under these conditions is 0.62.

What is the distance moved by the solvent?

(1)

- A 680 mm
- B 68 mm
- C 42 mm
- D 26 mm

- (b) In gas chromatography, GC, which of these would be the most suitable carrier gas?

(1)

- A argon
- B hydrogen
- C methane
- D oxygen

(Total for Question 11 = 2 marks)

Use this space for any rough working. Anything you write in this space will gain no credit.

12 The high resolution mass spectrum of a compound X has a molecular ion peak at  $m/z = 44.0632$ . Accurate relative atomic masses are given in the table.

Element	Relative atomic mass
Hydrogen	1.0079
Carbon	12.0000
Oxygen	15.9949

Which of these compounds, with a relative molecular mass of 44, gives rise to this peak?

A

B

C

D  $O=C=O$

(Total for Question 12 = 1 mark)

13 How many optical isomers does this molecule have?

- A 2
- B 3
- C 6
- D 8

(Total for Question 13 = 1 mark)

14 Which of these structures is **not** identical to the others?

Structure A

Structure B

Structure C

Structure D

- A Structure A
- B Structure B
- C Structure C
- D Structure D

(Total for Question 14 = 1 mark)

TOTAL FOR SECTION A = 20 MARKS

SECTION B

Answer ALL the questions. Write your answers in the spaces provided.

15 The standard enthalpy change of solution for ammonium nitrate,  $\text{NH}_4\text{NO}_3$ , is  $+25.7 \text{ kJ mol}^{-1}$ .

- (a) Calculate the value for the standard entropy change in the surroundings,  $\Delta S_{\text{surroundings}}^{\ominus}$ , when ammonium nitrate dissolves in water at 298 K. Include a sign and units with your answer.

(2)

- (b) Explain what can be deduced from your answer in (a) about the sign and the value of the standard entropy change in the system,  $\Delta S_{\text{system}}^{\ominus}$ , when  $\text{NH}_4\text{NO}_3$  dissolves.

- 16 A student investigated the kinetics of the reaction between bromate(V) ions and bromide ions in acidic conditions.

- (a) In the first experiment, the student measured the initial rate of the reaction at five different concentrations of bromate(V) ions,  $\text{BrO}_3^-$ . In each case, the initial concentrations of bromide ions and hydrogen ions were constant and in large excess. The results obtained are shown.

Initial concentration of bromate(V) ions / $\text{mol dm}^{-3}$	Initial rate of reaction / $\text{mol dm}^{-3} \text{ s}^{-1}$
0.030	$4.17 \times 10^{-7}$
0.060	$8.34 \times 10^{-7}$
0.090	$1.25 \times 10^{-6}$
0.120	$1.67 \times 10^{-6}$
0.150	$2.09 \times 10^{-6}$

- (i) Use the results to plot a suitable graph that can be used to show that the reaction is first order with respect to bromate(V) ions.

(3)

(ii) State how your graph shows that the reaction is first order with respect to bromate(V) ions.

(1)

(b) In the second experiment, the student determined the initial rates of the same reaction starting with different concentrations of the reactants.

Run	$[\text{BrO}_3^-]$ / mol dm <sup>-3</sup>	$[\text{Br}^-]$ / mol dm <sup>-3</sup>	$[\text{H}^+]$ / mol dm <sup>-3</sup>	Initial rate of reaction / mol dm <sup>-3</sup> s <sup>-1</sup>
1	0.062	0.21	0.40	$1.52 \times 10^{-5}$
2	0.31	0.21	0.20	$1.90 \times 10^{-5}$
3	0.062	0.63	0.40	$4.56 \times 10^{-5}$

(i) Use these results and your answer to (a) to deduce the orders with respect to Br<sup>-</sup> ions and H<sup>+</sup> ions.

(2)

Br<sup>-</sup> ions.....

H<sup>+</sup> ions.....

(ii) Write the rate equation for the reaction.

(1)

(iii) Use the results for Run 1 and your rate equation from (b)(ii) to calculate the value for the rate constant,  $k$ . Include units in your answer.

17 This question is about an ester, **Y**, with the molecular formula  $C_8H_{16}O_2$ .

- (a) **Y** contains 66.7% carbon, 11.1% hydrogen and 22.2% oxygen by mass. Show that these data are consistent with its molecular formula.

(2)

- (b) The structure of compound **Y** is

- (i) Give the IUPAC name of **Y**.

(2)

- (ii) Draw the structures of two organic compounds that would react together to form **Y**.

(1)

(c) The high resolution proton NMR spectrum of compound **Y** was obtained.

(i) Label the three remaining hydrogen environments B, C and D on the structure.

(1)

(ii) Complete the table.

(3)

Hydrogen environment	Splitting pattern of peak	Relative peak area
A	triplet	3
B		
C		
D		

(Total for Question 17 = 9 marks)

\*18 The table shows the theoretical and experimental (Born-Haber) lattice energy data for two metal halide compounds, sodium chloride and magnesium iodide.

Metal halide	Lattice energy / $\text{kJ mol}^{-1}$	
	Theoretical	Experimental (Born-Haber)
Sodium chloride	-770	-780
Magnesium iodide	-1944	-2327

Using the data, compare and contrast the type and strength of bonding in these compounds.

Give reasons for your answers.
