Paper Reference **WEC12/01**

Economics

International Advanced Subsidiary

Unit 2: Macroeconomic performance and policy

You must have:

Source Booklet (enclosed)

Total Marks

Instructions

- Use **black** ink or ball-point pen.
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Answer **ALL** questions in Sections A, B and C.
- Answer **ONE** question in Section D.
- Answer the questions in the spaces provided
– *there may be more space than you need.*

Information

- The total mark for this paper is 80.
- The marks for **each** question are shown in brackets
– *use this as a guide as to how much time to spend on each question.*
- Calculators may be used.

Advice

- Read each question carefully before you start to answer it.
- Check your answers if you have time at the end.

SECTION A

Answer ALL questions in this section.

Questions must be answered with a cross in a box ☒. If you change your mind about an answer, put a line through the box ☒ and then mark your new answer with a cross ☒.

1 The short-run Phillips curve illustrates a possible trade-off between

- A economic growth and income inequality
- B inflation and unemployment
- C economic growth and protection of the environment
- D inflation and income inequality

(Total for Question 1 = 1 mark)

2 Ghana's rate of economic growth increased from 3.6% in 2016 to 8.5% in 2017.

Which **one** of the following is a likely result of this increase in the rate of economic growth?

- A An increase in unemployment
- B A decrease in investment
- C An increase in living standards
- D A decrease in tax revenues

(Total for Question 2 = 1 mark)

3 The UK Government is spending £56 billion on building HS2, a high-speed railway network.

Which **one** of the following is also an injection into the circular flow of income?

- A Increased spending on imports
- B Increased spending on exports
- C Increased levels of saving
- D Increased income tax receipts

(Total for Question 3 = 1 mark)

4 In 2017 a fall in mining and manufacturing production led to the Brazilian economy operating below its productive potential.

Which **one** of the following is most likely to be associated with a negative output gap?

- A High unemployment
- B High business confidence
- C An increase in house prices
- D An increase in wellbeing

(Total for Question 4 = 1 mark)

5 The diagram shows aggregate supply and aggregate demand for an economy.

Which **one** of the following was the most likely cause of the change from AD to AD₁?

- A A decrease in government spending
- B An increase in interest rates
- C A decrease in net exports
- D An increase in consumption

(Total for Question 5 = 1 mark)

6 The chart shows a government budget between quarter 3 2013 and quarter 1 2018 (\$ billion).

What can be deduced from this chart?

- A There was a budget surplus in quarter 3 2015
- B There was a budget deficit in quarter 3 2013
- C Tax receipts exceeded government expenditure in quarter 1 2017
- D Government expenditure exceeded tax receipts in quarter 3 2015

(Total for Question 6 = 1 mark)

TOTAL FOR SECTION A = 6 MARKS

SECTION B

Answer ALL questions in this section in the space provided.

- 7 Bosnia and Herzegovina, a country in Europe, experienced high levels of unemployment. In 2013 the unemployment rate was 46% and in 2018 it was 37%.

Explain **one** possible effect of high rates of unemployment on the public finances of Bosnia and Herzegovina.

The economy of Argentina

Figure 1 The base rate of interest for Argentina, April 2013 – April 2018

Figure 2 Quarterly GDP growth rate (%), 2015 – 2017

Extract A The problems facing the economy

Argentina is South America's second largest economy. Mauricio Marci was elected as its President in 2015. He faced the difficult task of controlling inflation which was between 30%–40% per year. He also needed to reduce the large budget deficit which was 7.1% of GDP. Between the end of 2015 and the beginning of 2016 the economy went into recession. This was caused by a significant reduction in government spending in an attempt to balance the budget. The purchasing power of consumers declined as wages fell and the rate of inflation rose to 40%. A fall in demand for Argentina's exports also contributed to the decrease in economic growth. 5

Extract B Improving economic outlook

Since coming out of recession in 2016, economic growth in Argentina has stabilised at an annual rate of around 3% per year. However, high inflation is still a major problem. Inflation was 25% in 2017. The effect of this inflation is damaging to both households and businesses. Rising prices have reduced domestic business investment as firms are unsure about future costs. One of the Argentinian Government's key economic policies is to stabilise prices to encourage consumption and investment. 5

A fall in the value of the Argentinian currency, the peso, against the dollar also caused inflationary pressure. In 2018 the peso lost around 12% of its value against the dollar. This makes importing goods from the USA very expensive. At the same time there was a decrease in the value of commodity exports, causing a current account deficit. In an attempt to reduce the rate of inflation and to stabilise the currency, the Central Bank of Argentina increased the base rate of interest to 40%. 10

However, the situation is not all bad. Real wages are rising in many sectors and consumer spending is increasing. Also, the Government plans to spend US\$14 billion on infrastructure. These positive changes have helped Argentina to attract investment from Japanese transport companies such as Mitsubishi and Marubeni Corp, and the American technology company, Apple. 15
