Question Number	Scheme	Marks
1. (a)	$r = \frac{10 \times 56076 - 773 \times 724}{\sqrt{(10 \times 60475 - 773^2)(10 \times 53122 - 724^2)}}$ o.e.	B1, B1 M1 A1ft
(b)	r = 0.155357  Both weak correlation  Neither score is a good indication of future performance  Interview test is slightly better since correlation is positive	A1 (5) B1g B1h (2) Total 7 marks
NB	$S_{xx} = 60475 - \frac{(773)^2}{10} = 722.1, S_{yy} = 53122 - \frac{(724)^2}{10} = 704.4, S_{xy} = 56076 - \frac{773 \times 724}{10} = 110.8$	
(a)	$1^{\text{st}}$ B1 for $\sum x$ and $2^{\text{nd}}$ B1 for $\sum y$ , should be seen or implied.	
	M1 for at least one correct attempt at one of $S_{xx}$ , $S_{yy}$ or $S_{xy}$ and then using in the correct formula	
(b)	$1^{st}$ A1ft for a fully correct expression. (ft their $\Sigma x$ and their $\Sigma y$ ) or 3 correct expressions for $S_{xx}$ , $S_{xy}$ , and $S_{yy}$ but possibly incorrect values for these placed correctly in $r$ . $2^{nd}$ A1 for awrt 0.155	
	If $ r  > 0.5$ they can score B1g in (b) for saying that it (skills test) is not a good guide to performance but B0h since a second acceptable comment about both tests is not possible.	
	Give B1 for one correct line, B1B1 for any 2.  If the only comment is the test(s) <u>are</u> a good guide: scores B0B0  If the only comment is the tests are not good: scores B1B0 (second line)	
	The third line is for a comment that suggests that the interview test is OK but the skills test is not since one is positive and the other is negative.	
	Treat 1 <sup>st</sup> B1 as B1g and 2 <sup>nd</sup> as B1h	
	An answer of "no" alone scores B0B0

(d)	$\frac{Q_1 - 2Q_2 + Q_3}{Q_3 - Q_1} = \frac{170 - 2 \times 198 + 254}{254 - 170}, = 0.3$ AWRT 0.33	(4) M1, A1
	Positive skew.	A1ft (2)
		(3) Total 14 marks
(a)	1 <sup>st</sup> M1 for using $\frac{\sum x}{n}$ with a credible numerator and $n = 12$ .	
NB	for using a correct formula, root required but can ft their mean  Use of $s = \sqrt{8321.84} = 91.22$ is OK for M1A1 here.  Answers only from a calculator in (a) can score full marks	
(b)	1 <sup>st</sup> B1 for median= 198 only, 2 <sup>nd</sup> B1 for lower quartile 3 <sup>rd</sup> B1 for upper quartile	
S.C.	If all $Q_1$ and $Q_3$ are incorrect but an ordered list (with $\geq 6$ correctly placed) is seen and used then award B0B1 as a special case for these last two marks.	
(c)	for a clear attempt using their quartiles in given formula, for any value in the range 370 - 392  1 <sup>st</sup> B1ft for any one correct decision about <i>B</i> or <i>F</i> - ft their limit in range (258, 420)  2 <sup>nd</sup> B1ft for correct decision about both <i>F</i> and <i>B</i> - ft their limit in range (258, 420)  If more points are given score B0 here for the second B mark.  ( Can score M0A0B1B1 here)	
(d)	M1 for an attempt to use their figures in the correct formula – must be seen (≥ 2 correct substitutions)  1st A1 for AWRT 0.33  2nd A1ft for positive skew. Follow through their value/sign of skewness.  Ignore any further calculations.  "positive correlation" scores A0

	1st M1 for attempt at width of the correct bar (90.5 - 78.5) [Maybe on histogram or in table]  1st A1 for 0.5×12 or 6 (may be seen on the histogram. Must be related to the are of the bar above 78.5 - 90.5.  2nd M1 for attempting area of correct bar× 140/(their 70)  B1 for 70 seen anywhere in their working 2nd A1 for correct answer of 12.  Minimum working required is 2×0.5×12 where the 2 should come from 140/70  Beware 90.5 - 78.5 = 12 (this scores M1A0M0B0A0)  Common answer is 0.5×12 = 6 (this scores M1A1M0B0A0)  If unsure send to review e.g. 2 × 0.5 × 12=12 without 70 being seen

	1 <sup>st</sup> A1	or shaded diagram - must have values on z-axis and probability areas shown for correct use of 0.8 or $p = 0.2$ . Need a correct probability statement. May be implied by a suitable value for $z$ seen (e.g. $z = 0.84$ )	Ĺ	
	2 <sup>nd</sup> M1	for attempting to standardise. Values for $x$ and $\mu$ used in formula.		
	B1 2 <sup>nd</sup> A1	Don't need $z =$ for this M1 nor a z-value, just mark standardization. for $z = 0.8416$ (or better) [ $z = 0.84$ usually just loses this mark in (a)] for AWRT 11.9		
(c)	1 <sup>st</sup> M1	for attempting to Standardise with 200 and their sd(>0) e.g. $(\pm)\frac{180-200}{\text{their }\sigma}$
