

3.

Figure 2

A solid consists of a uniform solid right cylinder of height  $5l$  and radius  $3l$  joined to a uniform solid hemisphere of radius  $3l$ . The plane face of the hemisphere coincides with a circular end of the cylinder and has centre  $O$ , as shown in Figure 2.

The density of the hemisphere is **twice** the density of the cylinder.

(a) Find the distance of the centre of mass of the solid from  $O$ .

(5)

Figure 3

The solid is now placed with its circular face on a plane inclined at an angle  $\theta^\circ$  to the horizontal, as shown in Figure 3. The plane is sufficiently rough to prevent the solid slipping. The solid is on the point of toppling.

(b) Find the value of  $\theta$ .
