

4.

Figure 1

The trapezium $ABCD$ is a uniform lamina with $AB = 4$ m and $BC = CD = DA = 2$ m, as shown in Figure 1.

- (a) Show that the centre of mass of the lamina is $\frac{4\sqrt{3}}{9}$ m from AB . (5)

The lamina is freely suspended from D and hangs in equilibrium.

- (b) Find the angle between DC and the vertical through D . (5)

5.

Figure 2

A uniform rod AB has mass 4 kg and length 1.4 m . The end A is resting on rough horizontal ground. A light string BC has one end attached to B and the other end attached to a fixed point C . The string is perpendicular to the rod and lies in the same vertical plane as the rod. The rod is in equilibrium, inclined at 20° to the ground, as shown in Figure 2.

(a) Find the tension in the string. (4)

Given that the rod is about to slip,

(b) find the coefficient of friction between the rod and the ground. (7)
