

Mark Scheme (Results)

Summer 2013

GCE Statistics 3 (6691/01R)

Edexcel and BTEC Qualifications

Edexcel and BTEC qualifications come from Pearson, the world's leading learning company. We provide a wide range of qualifications including academic, vocational, occupational and specific programmes for employers. For further information, please visit our website at www.edexcel.com.

Our website subject pages hold useful resources, support material and live feeds from our subject advisors giving you access to a portal of information. If you have any subject specific questions about this specification that require the help of a subject specialist, you may find our Ask The Expert email service helpful.

Pearson: helping people progress, everywhere

Our aim is to help everyone progress in their lives through education. We believe in every kind of learning, for all kinds of people, wherever they are in the world. We've been involved in education for over 150 years, and by working across 70 countries, in 100 languages, we have built an international reputation for our commitment to high standards and raising achievement through innovation in education. Find out more about how we can help you and your students at: www.pearson.com/uk

General Marking Guidance

- All candidates must receive the same treatment. Examiners must mark the first candidate in exactly the same way as they mark the last.
- Mark schemes should be applied positively. Candidates must be rewarded for what they have shown they can do rather than penalised for omissions.
- Examiners should mark according to the mark scheme not according to their perception of where the grade boundaries may lie.
- There is no ceiling on achievement. All marks on the mark scheme should be used appropriately.
- All the marks on the mark scheme are designed to be awarded. Examiners should always award full marks if deserved, i.e. if the answer matches the mark scheme. Examiners should also be prepared to award zero marks if the candidate's response is not worthy of credit according to the mark scheme.
- Where some judgement is required, mark schemes will provide the principles by which marks will be awarded and exemplification may be limited.
- Crossed out work should be marked UNLESS the candidate has replaced it with an alternative response.

EDEXCEL GCE MATHEMATICS

General Instructions for Marking

1. The total number of marks for the paper is 75.
2. The Edexcel Mathematics mark schemes use the following types of marks:
 - M marks: method marks are awarded for 'knowing a method and attempting to apply it', unless otherwise indicated.
 - A marks: accuracy marks can only be awarded if the relevant method (M) marks have been earned.
 - B marks are unconditional accuracy marks (independent of M marks)
 - Marks should not be subdivided.
3. Abbreviations

These are some of the traditional marking abbreviations that will appear in the mark schemes:

- bod – benefit of doubt
 - ft – follow through
 - the symbol \checkmark will be used for correct ft
 - cao – correct answer only
 - cso - correct solution only. There must be no errors in this part of the question to obtain this mark
 - isw – ignore subsequent working
 - awrt – answers which round to
 - SC: special case
 - oe – or equivalent (and appropriate)
 - dep – dependent
 - indep – independent
 - dp decimal places
 - sf significant figures
 - * The answer is printed on the paper
 - \square The second mark is dependent on gaining the first mark
4. All A marks are 'correct answer only' (cao.), unless shown, for example, as A1 ft to indicate that previous wrong working is to be followed through. After a misread however, the subsequent A marks affected are treated as A ft, but manifestly absurd answers should never be awarded A marks.
 5. For misreading which does not alter the character of a question or materially simplify it, deduct two from any A or B marks gained, in that part of the question affected.
 6. If a candidate makes more than one attempt at any question:
 - If all but one attempt is crossed out, mark the attempt which is NOT crossed out.
 - If either all attempts are crossed out or none are crossed out, mark all the attempts and score the highest single attempt.
 7. Ignore wrong working or incorrect statements following a correct answer.
 8. In some instances, the mark distributions (e.g. M1, B1 and A1) printed on the candidate's response may differ from the final mark scheme.

| Question Number | Scheme | Marks |
|-----------------|--|--|
| 1. | Label females 1 – 100 (or 0 – 99) and males 1 – 300 (or 0 – 299) Using <i>random numbers</i> for <u>each group</u> in range 1 – 100 (0 – 99) <u>select 15</u> females and using 1 – 300 (or 0 – 299) select <u>45</u> <u>males</u> | B1 B1 B1 [Total 3] |
| | Notes | |
| | 1 st B1 for labelling\numbering\listing females <u>and</u> males 2 nd B1 for use of random numbers or “randomly select” in <u>each group</u> (may be implied) 3 rd B1 for selecting the correct number of females <u>and</u> males e.g. randomly select 45 males and 15 females scores 2 nd and 3 rd B marks since randomly selecting and the “each group” is implied, If using systematic sampling within each strata allow 1 st B1 and 3 rd B1 (if earned) but 2 nd B0 | |

| Question Number | Scheme | Marks |
|-----------------|--|---|
| 2. | $X \sim N(40, 3^2) \quad \bar{X} \sim N\left(40, \frac{9}{n}\right)$ <p style="text-align: right;">(Condone $Y \sim N\left(40, \frac{9}{n}\right)$)</p> $P(\bar{X} > 42) = P\left(Z > \frac{42 - 40}{\sqrt{\frac{9}{n}}}\right)$ $\frac{42 - 40}{\sqrt{\frac{9}{n}}} \geq 1.6449$ $n \geq 6.087$ $n = 7$ | <p>B1</p> <p>M1</p> <p>B1 dM1</p> <p>A1</p> <p>[Total 5]</p> |
| | <p>1st B1 for stating the correct distribution for \bar{X}. May be implied if correctly used in line 2 and no incorrect version seen elsewhere.</p> <p>1st M1 for an attempt to standardise with 42, 40 and their $\sqrt{\frac{9}{n}}$, must have n. Allow \pm</p> <p>2nd B1 for using $z = \pm 1.6449$ (or better)</p> <p>2nd dM1 Dep on 1st M1 for forming an equation in n or \sqrt{n}. Allow “=” or “<” i.e. setting their standardised expression = their z value ($z > 1.5$)</p> <p>A1 for $n = 7$ only The A1 must follow from correct working so e.g. $n < 6.087$ leading to $n = 7$ is A0</p> | |

| Question Number | Scheme | | | | | | | | | | | Marks |
|-----------------|---|----------|----------|----------|----------|----------|----------|----------|----------|----------|----------|--------------------------|
| 3 (a) | Town | <i>A</i> | <i>B</i> | <i>C</i> | <i>D</i> | <i>E</i> | <i>F</i> | <i>G</i> | <i>H</i> | <i>I</i> | <i>J</i> | M1 |
| | Pop | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | |
| | Empl | 2 | 1 | 3 | 5 | 4 | 6 | 10 | 8 | 9 | 7 | |
| | <i>d</i> | 1 | 1 | 0 | 1 | 1 | 0 | 3 | 0 | 0 | 3 | |
| | <i>d</i> ² | 1 | 1 | 0 | 1 | 1 | 0 | 9 | 0 | 0 | 9 | |
| | $\sum d^2 = 22$ $r_s = 1 - \frac{6 \times 22}{10 \times 99}$ $= \frac{143}{165} = 0.866$ | | | | | | | | | | | M1A1 |
| | | | | | | | | | | | | dM1 |
| | | | | | | | | | | | | awrt 0.867 |
| | | | | | | | | | | | | A1 (5) |
| (b) | $H_0: \rho = 0 ; H_1: \rho > 0$ CV = 0.6485 in critical region / significant/ reject H_0 evidence of <u>positive</u> correlation between population and no. of employees | | | | | | | | | | | B1 B1 M1 A1 (4) |
| (c) | CV = <u>0.6319</u> [not in critical region / not significant/ do not reject H_0] No evidence of <u>positive</u> correlation | | | | | | | | | | | B1 B1 (2) |
| (d) | No evidence to suggest that as pop' increased the no. of employees increased <u>linearly</u> . Villages <u>ranked</u> highly for pop' were also <u>ranked</u> highly for the no. of employees. | | | | | | | | | | | B1 B1 (2) |
| ALT | Alternate for part (d) if different conclusions in part (b) and part (c) Data probably not (bivariate) normal therefore Spearman's coefficient is more suitable than the product moment correlation coefficient. | | | | | | | | | | | [Total 13] |
| Notes | | | | | | | | | | | | |
| (a) | 1 st M1 for an attempt to rank no of employees against the populations 2 nd M1 for attempting $\sum d^2$ (must be using ranks) ft their ranks 1 st A1 for 22 3 rd dM1 dep on 1 st M1 for use of the correct formula with their $\sum d^2$. If ans. is not correct an expr' is required. | | | | | | | | | | | |
| (b) | 1 st B1 for both hypotheses in terms of ρ , H_1 must be one tail and compatible with their ranking M1 for a correct statement relating their r_s ($ r_s < 1$) with their cv but cv must be such that $ cv < 1$ A1 for a correct contextualised comment that is rejecting H_0 Must mention "population" and "no. of employees" and "positive correlation". Follow through their r_s and their cv (provided it is $ cv < 1$ Use of "association" is A0 | | | | | | | | | | | |
| (c) | 1 st B1 for 0.6319 2 nd B1 does not require context just no <u>positive</u> correlation mentioned | | | | | | | | | | | |
| (d) | 1 st B1 for a comment relating to pmcc (i) no <u>linear</u> relationship <u>or</u> (ii) pmcc requires (joint) normal distribution 2 nd B1 for a second comment relating to Spearman's (i) there is a (non-linear) relationship between <u>rank</u> s.. <u>or</u> (ii) data not (joint) normal so Spearman's is better | | | | | | | | | | | |
