

# Mark Scheme (Results)

Summer 2016

Pearson Edexcel GCE in Core Mathematics 2 (6664/01)

# Edexcel and BTEC Qualifications

Edexcel and BTEC qualifications are awarded by Pearson, the UK's largest awarding body. We provide a wide range of qualifications including academic, vocational, occupational and specific programmes for employers. For further information visit our qualifications websites at <u>www.edexcel.com</u> or <u>www.btec.co.uk</u>. Alternatively, you can get in touch with us using the details on our contact us page at <u>www.edexcel.com/contactus</u>.

Pearson: helping people progress, everywhere

Pearson aspires to be the world's leading learning company. Our aim is to help everyone progress in their lives through education. We believe in every kind of learning, for all kinds of people, wherever they are in the world. We've been involved in education for over 150 years, and by working across 70 countries, in 100 languages, we have built an international reputation for our commitment to high standards and raising achievement through innovation in education. Find out more about how we can help you and your students at: <a href="https://www.pearson.com/uk">www.pearson.com/uk</a>

#### General Marking Guidance

- All candidates must receive the same treatment. Examiners must mark the first candidate in exactly the same way as they mark the last.
- Mark schemes should be applied positively. Candidates must be rewarded for what they have shown they can do rather than penalised for omissions.
- Examiners should mark according to the mark scheme not according to their perception of where the grade boundaries may lie.
- There is no ceiling on achievement. All marks on the mark scheme should be used appropriately.
- All the marks on the mark scheme are designed to be awarded. Examiners should always award full marks if deserved, i.e. if the answer matches the mark scheme. Examiners should also be prepared to award zero marks if the candidate's response is not worthy of credit according to the mark scheme.
- Where some judgement is required, mark schemes will provide the principles by which marks will be awarded and exemplification may be limited.
- When examiners are in doubt regarding the application of the mark scheme to a candidate's response, the team leader must be consulted.
- Crossed out work should be marked UNLESS the candidate has replaced it with an alternative response.

#### PEARSON EDEXCEL GCE MATHEMATICS

General Instructions for Marking

- 1. The total number of marks for the paper is 75
- 2. The Edexcel Mathematics mark schemes use the following types of marks:
- M marks: Method marks are awarded for 'knowing a method and attempting to apply it', unless otherwise indicated.
- A marks: Accuracy marks can only be awarded if the relevant method (M) marks have been earned.
- B marks are unconditional accuracy marks (independent of M marks)
- Marks should not be subdivided.
- 3. Abbreviations

These are some of the traditional marking abbreviations that will appear in the mark schemes.

- bod benefit of doubt
- ft follow through
- the symbol  $\sqrt{}$  will be used for correct ft
- cao correct answer only
- cso correct solution only. There must be no errors in this part of the question to obtain this mark
- isw ignore subsequent working
- awrt answers which round to
- SC: special case
- oe or equivalent (and appropriate)
- d... or dep dependent
- indep independent
- dp decimal places
- sf significant figures
- \* The answer is printed on the paper or ag- answer given
- \_ or d... The second mark is dependent on gaining the first mark

- 4. All A marks are 'correct answer only' (cao.), unless shown, for example, as A1 ft to indicate that previous wrong working is to be followed through. After a misread however, the subsequent A marks affected are treated as A ft.
- 5. For misreading which does not alter the character of a question or materially simplify it, deduct two from any A or B marks gained, in that part of the question affected.
- 6. If a candidate makes more than one attempt at any question:
  - If all but one attempt is crossed out, mark the attempt which is NOT crossed out.
  - If either all attempts are crossed out or none are crossed out, mark all the attempts and score the highest single attempt.
- 7. Ignore wrong working or incorrect statements following a correct answer.

# General Principles for Core Mathematics Marking

(But note that specific mark schemes may sometimes override these general principles).

#### Method mark for solving 3 term quadratic:

1. Factorisation

$$(x^2+bx+c) = (x+p)(x+q)$$
, where  $pq = |c|$ , leading to x = ...

$$(ax^2 + bx + c) = (mx + p)(nx + q)$$
, where  $|pq| = |c|$  and  $|mn| = |a|$ , leading to x = ...

# 2. Formula

Attempt to use the correct formula (with values for a, b and c).

# 3. Completing the square

Solving  $x^2 + bx + c = 0$ :  $\left(x \pm \frac{b}{2}\right)^2 \pm q \pm c = 0$ ,  $q \neq 0$ , leading to  $x = \dots$ 

# Method marks for differentiation and integration:

# 1. Differentiation

Power of at least one term decreased by 1.  $(x^n \rightarrow x^{n-1})$ 

# 2. Integration

Power of at least one term increased by 1.  $(x^n \rightarrow x^{n+1})$ 

#### <u>Use of a formula</u>

Where a method involves using a formula that has been learnt, the advice given in recent examiners' reports is that the formula should be quoted first.

Normal marking procedure is as follows:

<u>Method mark</u> for quoting a correct formula and attempting to use it, even if there are small errors in the substitution of values.

Where the formula is <u>not</u> quoted, the method mark can be gained by implication from <u>correct</u> working with values, but may be lost if there is any mistake in the working.

#### Exact answers

Examiners' reports have emphasised that where, for example, an exact answer is asked for, or working with surds is clearly required, marks will normally be lost if the candidate resorts to using rounded decimals.

| Question<br>Number | Scheme   | Marks              |
|--------------------|--|--------------------|
| 1.                 | $r = \frac{3}{4}, S_4 = 175$   |                    |
| (a)<br>Way 1       | $\frac{a\left(1-\left(\frac{3}{4}\right)^{4}\right)}{1-\frac{3}{4}} \text{ or } \frac{a\left(1-\frac{3}{4}^{4}\right)}{1-\frac{3}{4}} \text{ or } \frac{a\left(1-0.75^{4}\right)}{1-0.75} $ Substituting $r = \frac{3}{4}$ or 0.75 and $n = 4$ into the formula for $S_n$  | M1                 |
|                    | $175 = \frac{a\left(1 - \left(\frac{3}{4}\right)^4\right)}{1 - \frac{3}{4}} \implies a = \frac{175\left(1 - \frac{3}{4}\right)}{\left(1 - \left(\frac{3}{4}\right)^4\right)}  \left\{ \Rightarrow a = \frac{\left(\frac{175}{4}\right)}{\left(\frac{175}{256}\right)} \Rightarrow \right\} \underbrace{a = 64}^* $ Correct proof | A1*                |
| (a)<br>Way 2       | $a + a\left(\frac{3}{4}\right) + a\left(\frac{3}{4}\right)^2 + a\left(\frac{3}{4}\right)^3 \qquad \qquad a + a\left(\frac{3}{4}\right) + a\left(\frac{3}{4}\right)^2 + a\left(\frac{3}{4}\right)^3$  | [ <b>2</b> ]<br>M1 |
|                    | $\frac{175}{64}a = 175 \left( \Rightarrow a = \frac{175}{\left(\frac{175}{64}\right)} \right) \Rightarrow \underline{a = 64}^{*}$ or 2.734375 <i>a</i> =175 $\Rightarrow \underline{a = 64}$   | A1*                |
|                    |  | [2]                |
| (a)<br>Way 3       | $\{S_4 = \} \frac{64\left(1 - \left(\frac{3}{4}\right)^4\right)}{1 - \frac{3}{4}} \text{ or } \frac{64\left(1 - \frac{3^4}{4}\right)}{1 - \frac{3}{4}} \text{ or } \frac{64\left(1 - 0.75^4\right)}{1 - 0.75} $ Applying the formula for $S_n$ with $r = \frac{3}{4}$ , $n = 4$ and $a$ as 64.                                   | M1                 |
|                    | =175 so $a = 64^*$ Obtains 175 with no errors seen and concludes $a = 64^*$ .  | A1*                |
|                    |  | [2]                |
| (b)                | $\{S_{\infty}\} = \frac{64}{\left(1 - \frac{3}{4}\right)}; = 256 \qquad S_{\infty} = \frac{(\text{their } a)}{1 - \frac{3}{4}} \text{ or } \frac{64}{1 - \frac{3}{4}}$   | M1;                |
|                    | ( 4) 256   | Alcao              |
|                    |  | [2]                |
| (c)                | Writes down either "64" $\left(\frac{3}{4}\right)^8$ or awrt 6.4 or<br>$\left\{D = T_9 - T_{10} = \right\} 64 \left(\frac{3}{4}\right)^8 - 64 \left(\frac{3}{4}\right)^9$ "64" $\left(\frac{3}{4}\right)^9$ or awrt 4.8, using $a = 64$ or their $a$   | M1                 |
|                    | A correct expression for the difference<br>(i.e. $\pm (T_9 - T_{10})$ ) using $a = 64$ or their $a$ .  | dM1                |
|                    | $\left\{ = 64 \left(\frac{3}{4}\right)^8 \left(\frac{1}{4}\right) = 1.6018066 \right\} = \underline{1.602} (3  \text{dp}) $ 1.602 or -1.602  | A1 cao             |
|                    |  | [3]                |
|                    |  | 7                  |

|               |         | Question 1 Notes   |  |  |  |
|---------------|---------|--|--|--|--|
| <b>1.</b> (a) |         | Allow invisible brackets around fractions throughout all parts of this question.   |  |  |  |
|               | M1      | There are three possible methods as described above.   |  |  |  |
|               | A1      | Note that this is a "show that" question with a printed answer.<br>In <b>Way 1</b> this mark usually requires $a = r/a$ where r and a may be unsimplified breakets from the  |  |  |  |
|               |         | In <b>Way 1</b> this mark <b>usually</b> requires $a = p/q$ where p and q may be unsimplified brackets from the formula (or could be 11200/175 for example) as an intermediate step before the conclusion $a = 64$ . |  |  |  |
|               |         | Exceptions include $a = 175/4 * 256/175$ i.e. multiplication by reciprocal rather than division or 175   |  |  |  |
|               |         | = $175a/64$ followed by the obvious $a = 64$ These also get A1   |  |  |  |
|               |         | In "reverse" methods such as <b>Way 3</b> we need a conclusion "so $a = 64$ " or some implication that   |  |  |  |
|               |         | their argument is reversible. Also a conclusion can be implied from a <u>preamble</u> , eg: "If I assume a   |  |  |  |
|               |         | = 64 then find $S$ = 175 as given this implies $a = 64$ as required"<br>This is a show that question and there should be no loss of accuracy   |  |  |  |
|               |         | This is a show that question and there should be no loss of accuracy.<br>In all the methods <b>if</b> decimals are used there should <b>not be rounding</b> .  |  |  |  |
|               |         | If 0.68359375 appears this is correct. If it is rounded it would not give the exact answer.  |  |  |  |
|               |         | 64(1-0.31640625) or 43.75 are each correct – if they are rounded then treat this as incorrect  |  |  |  |
|               |         | e.g. Way 3: "43.75/0.25 = 175 so $a = 64$ is A1" but "43/0.25 = 175 so $a = 64$ is A0" and   |  |  |  |
|               |         | " $44/0.25 = 175$ so a = 64 is A0"   |  |  |  |
|               |         | Yet another variant on Way 3: take a=64 then find the next 3 terms as 48, 36, 27 then  |  |  |  |
|               |         | add $64+48+36+27$ to get 175. Again need conclusion that $a = 64$ or some implication that their argument is reversible. Otherwise M1 A0   |  |  |  |
|               |         |  |  |  |  |
|               |         | c = 64 (their <i>a</i> found in part ( <i>a</i> ))   |  |  |  |
| (b)           | M1      | $S_{\infty} = \frac{64}{1-\frac{3}{4}} \text{ or } \frac{(\text{their } a \text{ found in part } (a))}{1-\frac{3}{4}}$   |  |  |  |
|               | A1      | 256 cao  |  |  |  |
| (c)           | NB      | Using <b>Sum of 10 terms</b> minus <b>Sum of 9 terms</b> is NOT a misread Scores <b>M0M0A0</b>   |  |  |  |
|               |         |  |  |  |  |
|               | M1      | Can be <b>implied.</b> Writes down either $64\left(\frac{3}{4}\right)^8$ or $64\left(\frac{3}{4}\right)^9$ ,   |  |  |  |
|               |         | using $a = 64$ (or their <i>a</i> found in part (a)).  |  |  |  |
|               | Note    | Ignore candidate's labelling of terms.   |  |  |  |
|               | Note    | $64\left(\frac{3}{4}\right)^8 = 6.407226563$ and $64\left(\frac{3}{4}\right)^9 = 4.805419922$  |  |  |  |
|               |         |  |  |  |  |
|               | dM1     | This is dependent on previous M mark and can be implied. Either $(2)^8 = (2)^9 = (2)^8$  |  |  |  |
|               |         | $64\left(\frac{3}{4}\right)^8 - 64\left(\frac{3}{4}\right)^9$ or $64\left(\frac{3}{4}\right)^9 - 64\left(\frac{3}{4}\right)^8$ or awrt 6.4 – awrt 4.8, using $a = 64$ (or their <i>a</i> from part (a))              |  |  |  |
|               |         |  |  |  |  |
|               | Note    | $1^{\text{st}}$ M1 and $2^{\text{nd}}$ M1 can be implied by the value of their   |  |  |  |
|               |         | difference = "their <i>a</i> found in part (a)" $\times \frac{3^8}{4^9} \approx \frac{\text{"their } a \text{ found in part (a)"}}{40}$  |  |  |  |
|               |         |  |  |  |  |
|               | Note    | Either $64\left(\frac{3}{4}\right)^9 - 64\left(\frac{3}{4}\right)^{10}$ or $64\left(\frac{3}{4}\right)^{10} - 64\left(\frac{3}{4}\right)^9$ is 1 <sup>st</sup> M1, 2 <sup>nd</sup> M0.                               |  |  |  |
|               | Note    | Entrier $64\left(\frac{1}{4}\right) = 64\left(\frac{1}{4}\right) = 61 - 64\left(\frac{1}{4}\right) = 64\left(\frac{1}{4}\right)$ is 1 - 101, 2 - 1010.   |  |  |  |
|               |         |  |  |  |  |
|               | A1      | 1.602 or -1.602 cao (This answer with no working is M1M1A1) But 1.6 with no working is   |  |  |  |
|               |         | M0M0A0   |  |  |  |
|               |         | $(1)$ 1 $(3)^8$  |  |  |  |
|               | Note    | $\left\{D = \frac{1}{4}T_9 \Longrightarrow \right\} D = \frac{1}{4}(64) \left(\frac{3}{4}\right)^\circ \text{ is } 1^{\text{st}} \text{ M1}, 2^{\text{nd}} \text{ M1}$   |  |  |  |
|               | Special | Obtains awrt 6.4, then obtains awrt 4.8 but rounds to $6 - 5$ when subtracting – award M1M1A0  |  |  |  |
|               | case    | ,  |  |  |  |

| Number        |                                      | Scheme   | Marks  |
|---------------|--------------------------------------|--|--|
|               | y = 8 - 2                            | $2^{x-1}, 0, x, 4$   |  |
| <b>2.</b> (a) | 7                                    | 7  | B1 cao   |
|               |                                      |  | [1]  |
|               |                                      | Outside brackets $\frac{1}{2} \times 1$ or $\frac{1}{2}$   | B1;  |
| (b)           | $\int \int (1^{4}(8-2))^{4}$         | $(2^{x-1})dx \approx \frac{1}{2} \times 1; \times \{7.5 + 2("their 7" + 6 + 4) + 0\}$  |  |
|               |                                      | $\frac{1}{2} + \frac{1}{2} + \frac{1}$ | <u>M1</u>  |
|               |                                      | candidate's y-ordinates.   |  |
|               | $\left\{=\frac{1}{2}\times4\right\}$ | 1.5 = 20.75 o.e. 20.75   | A1 cao   |
|               | ( 2                                  |  | [3   |
| (c)           | Area $(R)$                           | $=$ "20.75" $-\frac{1}{-}$ (7.5)(4)  | M1   |
|               |                                      | = 5.75   | A1 cao   |
|               |                                      |  | [2   |
|               |                                      | Question 2 Notes   |  |
|               |                                      | Requires the correct $\{ \}$ bracket structure. It needs the 7.5 stated but the 0 may be or  | nitted The   |
|               | A1<br>Note                           | Requires the correct {} bracket structure. It needs the 7.5 stated but the 0 may be ominner bracket needs to be multiplied by 2 and to be the summation of the remaining y valuable with no additional values.<br>If the only mistake is a copying error or is to omit one value from 2nd bracket this may be as a slip and the M mark can be allowed (An extra repeated term forfeits the M mark he (unless it is 0)). M0 is awarded if values used in brackets are x values instead of y values.<br>For 20.75 or fraction equivalent e.g. $20\frac{3}{4}$ or $\frac{83}{4}$<br><b>NB: Separate trapezia may be used</b> : B1 for 0.5, M1 for $1/2 h(a + b)$ used 3 or 4 times as before.   | lues in the<br>be regarded<br>owever<br>s<br>5<br>5 Then A1                                      |
|               |                                      | inner bracket needs to be multiplied by 2 and to be the summation of the remaining y va<br>table with no additional values.<br>If the only mistake is a copying error or is to omit one value from 2nd bracket this may b<br>as a slip and the M mark can be allowed (An extra repeated term forfeits the M mark he<br>(unless it is 0)). M0 is awarded if values used in brackets are x values instead of y values<br>For 20.75 or fraction equivalent e.g. $20\frac{3}{4}$ or $\frac{83}{4}$<br><b>NB: Separate trapezia may be used</b> : B1 for 0.5, M1 for 1/2 $h(a + b)$ used 3 or 4 times   | lues in the<br>be regarded<br>owever<br>5<br>Then A1<br>al answer<br>nswer of                    |
|               | Note<br>Special<br>case:<br>Common   | inner bracket needs to be multiplied by 2 and to be the summation of the remaining y valuable with no additional values.<br>If the only mistake is a copying error or is to omit one value from 2nd bracket this may be as a slip and the M mark can be allowed (An extra repeated term forfeits the M mark he (unless it is 0)). M0 is awarded if values used in brackets are x values instead of y values For 20.75 or fraction equivalent e.g. $20\frac{3}{4}$ or $\frac{83}{4}$<br><b>NB: Separate trapezia may be used</b> : B1 for 0.5, M1 for $1/2 h(a + b)$ used 3 or 4 times as before.<br>Bracketing mistake $0.5 \times (7.5 + 0) + 2($ their $7 + 6 + 4)$ scores B1 M1 A0 unless the final implies that the calculation has been done correctly (then full marks can be given). |     |                    | Question 3 Notes   |
|-----|--------------------|--|
| (a) | M1                 | Allow for $\{PQ =\} \sqrt{(7-10)^2 + (8-13)^2}$ or for $\{PQ =\} \sqrt{3^2 + 5^2}$ . Can be implied by answer.   |
|     | A1                 | Need to see $\sqrt{34}$ . You can ignore subsequent work so $\sqrt{34}$ followed by 5.83 earns M1 A1, but  |
|     |                    | $\{PQ =\} \sqrt{3^2 + 5^2} = 5.83$ , with no exact value for the answer given, earns M1A0. Allow   |
|     |                    | $\pm\sqrt{34}$ this time.  |
|     |                    | NB Some use equation of circle to find this distance Achieving $\sqrt{34}$ gets M1A1   |
|     |                    | Others find half of their $\pm\sqrt{34}$ . Do not isw here as it is an error – confusing <i>d</i> with diameter.<br>Give M1A0  |
| (b) | M1                 | Either of the correct approaches for equation of circle (as shown on scheme)   |
|     | A1                 | Correct equation (two are shown and any correct equivalent is acceptable)  |
| (c) |                    |  |
|     |                    | A correct start to finding the gradient of the tangent (see each scheme)   |
|     | B1                 | Complete method for finding the gradient of the tangent (see each scheme) Where implicit differentiation has been used the only slips allowed here should be sign slips.   |
|     | 1 <sup>st</sup> M1 | Correct attempt at line equation for tangent at correct point (10, 13) with <b>their tangent</b> gradient.<br>If the $y = mx + c$ method is used to find the equation, this M1 is earned at the point where the x- |
|     | 2 <sup>nd</sup> M1 | and y-values are substituted to find $c$ e.g. $13 = -3/5 \times 10 + c$  |
|     |                    | Accept any correct answer of the required format; so integer multiple of $3x + 5y - 95 = 0$ or<br>2y = 0.5 + 5y = 0 or $2y = 5y + 0.5 = 0$ (must include "=0") $a = 6$ ( $y = 100 = 0$ correct A1)                 |
|     |                    | 3x - 95 + 5y = 0 or $-3x - 5y + 95 = 0$ (must include "=0") e.g. $6x + 10y - 190 = 0$ earns A1<br>Also allow $5y + 3x - 95 = 0$ etc  |
|     | A1                 |  |
|     | Common<br>error    | $\frac{dy}{dx} = 2(x-7) + 2(y-8) = 6 + 10 = 16 \text{ so } (y-13) = 16(x-10) \text{ is marked B0 M0 M1 A0 (Way 2)}$  |

|                    | $= 2^{4} \left( 1 + \frac{4\left(-\frac{9}{2}x\right) + \frac{4(3)}{2}\left(-\frac{9}{2}x\right)^{2} + \dots}{2} \right)$                      | $(4 \times \times x) \text{ or } \left(\frac{4(3)}{2} \times \times x^2\right)$ | M1       |  |  |
|                    |  | At least one of $-288x$ or $+1944x^2$   | A1       |  |  |
|                    | $= (16) - 288x + 1944x^2$  | Both $-288x$ and $+1944x^2$   | A1       |  |  |
|                    |  |   | [4]      |  |  |
|                    | Parts (b), (c) and (d) may be marked together  |   |          |  |  |
| (b)                | <i>A</i> = "16"  | Follow through their value from (a)   | B1ft     |  |  |
|                    |  | $M_{\rm m} = h_0 \cos (i \pi n \sin (h) \sin (h))$                              | [1]      |  |  |
| (c)                | $\left\{ (1+kx)(2-9x)^4 \right\} = (1+kx)(16-288x+\{1944x^2+\})$   | May be seen in part (b) or (d) and can be implied by work in                    | M1       |  |  |
| (-)                |  | parts (c) or (d).   |          |  |  |
|                    | x terms: $-288x + 16kx = -232x$  |   |          |  |  |
|                    | giving, $16k = 56 \implies k = \frac{7}{2}$  | $k = \frac{7}{2}$   | A1       |  |  |
|                    | <u> </u>   | <u> </u>  |          |  |  |
| (1)                | 2 1044 2 2001 2  |   | [2]      |  |  |
| (d)                | $x^2$ terms: $1944x^2 - 288kx^2$   |   | N/1      |  |  |
|                    | So, $B = 1944 - 288\left(\frac{7}{2}\right); = 1944 - 1008 = 936$  | See notes   | M1       |  |  |
|                    | (2)  | 936   | A1       |  |  |
|                    |  |   | [2]<br>9 |  |  |

|               |  | Question 5   | Notes   |            |  |  |  |
|---------------|--|--|---|------------|--|--|--|
| (a)<br>Ways 1 | <b>B1 cao</b> 16   |  |   |            |  |  |  |
| and 3         |  |  |   |            |  |  |  |
|               | M1 Correct binomial coefficient associated with correct power of x <i>i.e</i> $\begin{pmatrix} {}^{4}C_{1} \times \times x \end{pmatrix}$ or $\begin{pmatrix} {}^{4}C_{2} \times \times x \end{pmatrix}$ |  |   |            |  |  |  |
|               |  | They may have 4 and 6 or 4 and $\frac{4(3)}{2}$ or even $\begin{pmatrix} 4 \\ 1 \end{pmatrix}$ and $\begin{pmatrix} 4 \\ 2 \end{pmatrix}$ as their coefficients. Allow missing   |   |            |  |  |  |
|               |  | signs and brackets for the M marks.  |   |            |  |  |  |
|               | 1 <sup>st</sup> A1   | At least one of $-288x$ or $+1944x^2$ (allow +- 2  | 88x)  |            |  |  |  |
|               | 2 <sup>nd</sup> A1   |  | Both $-288x$ and $+1944x^2$ (May list terms separated by commas) Also full marks for correct answer with no working here. Again allow +- $288x$ |            |  |  |  |
|               | Note   | If the candidate then divides their final correct answer through by 8 or any other common factor then isw and mark correct series when first seen. So (a) B1M1A1A1 .It is likely that this approach will be followed by (b) B0, (c) M1A0, (d) M1A0 if they continue with their new series e.g. $2-36x + 283x^2 +$ (Do not ft the value 2 as a mark was awarded for 16) |   |            |  |  |  |
| Way 2b        | Special<br>Case  | Slight Variation on the solution given in the  | scheme  |            |  |  |  |
|               | Case   | $(2-9x)^4 = (2-9x)(2-9x)(4-36x+81x^2)$   |   |            |  |  |  |
|               |  | $= (2-9x)(8-108x+486x^2+)$   |   |            |  |  |  |
|               |  |  | First term of 16  | B1         |  |  |  |
|               |  | $= 16 - 216x + 972x^2 - 72x + 972x^2$  | Multiplies out to give either 2 terms in x or 2 terms in $x^2$ .  | M1         |  |  |  |
|               |  |  | At least one of $-288x$ or $+1944x^2$   | A1         |  |  |  |
|               |  | $= (16) - 288x + 1944x^2 + \dots$  | Both $-288x$ and $+1944x^2$   | A1         |  |  |  |
|               |  |  |   |            |  |  |  |
| (b)           | B1ft   | <b>Parts (b), (c) and (d) may be marked togethe</b><br>Must <b>identify</b> $A = 16$ or $A = their$ constant term<br>clearly their answer to part (b). If they expand the<br>not sufficient for this mark.   | n found in part (a). Or may write just 16   |            |  |  |  |
| (c)           | M1   | Candidate shows intention to multiply $(1+kx)$ by<br>e.g. Just $(1 + kx)(16 - 288x +)$ or $(1 + kx)(16$  | -   |            |  |  |  |
|               | Note   |  |   |            |  |  |  |
|               | A1   | $k = \frac{7}{2}$ o.e. so 3.5 is acceptable  |   |            |  |  |  |
| (d)           | M1   | Multiplies out their $(1 + kx)(16 - 288x + 1944x)$   | $(2^2 +)$ to give <b>exactly</b> two terms (or coe  | fficients) |  |  |  |
|               |  | in $x^2$ and attempts to find <i>B</i> using <b>these two</b> te   | rms and a numerical value of k.   |            |  |  |  |
|               | A1<br>Note   | 936<br>Award A0 for $R = 0.26 r^2$   |   |            |  |  |  |
|               | Note   | Award A0 for $B = 936x^2$  |   |            |  |  |  |
|               |  | But allow A1 for $B = 936x^2$ followed by $B = 936x^2$   | 36 and treat this as a correction   |            |  |  |  |

| Question<br>Number | Scheme  | Marks              |

|                    | Incorrect answers   | A0                 |

|      | Question 6 Notes   |   |  |  |  |
|------|--------------------|---|--|--|--|
| (i)  | M1                 | Rearranges to give $\cos\left(\theta - \frac{\pi}{5}\right) = \pm \frac{1}{2}$  |  |  |  |
|      | Note               | M1 can be implied by seeing either $\frac{\pi}{3}$ or 60° as a result of taking cos <sup>-1</sup> ().   |  |  |  |
|      | A1                 | Answers <b>may be in degrees or radians</b> for this mark and may have just one correct answer Ignore mixed units in working if correct answers follow (recovery)   |  |  |  |
|      | A1                 | Both answers correct and in radians as multiples of $\pi = -\frac{2\pi}{15}$ and $\frac{8\pi}{15}$  |  |  |  |
|      |                    | Ignore EXTRA solutions outside the range $-\pi < \theta \le \pi$ but lose this mark for extra solutions in this range.  |  |  |  |
| (ii) | 1 <sup>st</sup> M1 | Using $\cos^2 x = 1 - \sin^2 x$ on the given equation. [Applying $\cos^2 x = \sin^2 x - 1$ , scores M0.]  |  |  |  |
|      | 1 <sup>st</sup> A1 | Obtaining a correct three term equation eg. either $4\sin^2 x - 7\sin x - 2 \{=0\}$   |  |  |  |
|      |                    | or $-4\sin^2 x + 7\sin x + 2 = 0$ or $4\sin^2 x - 7\sin x = 2$ or $4\sin^2 x = 7\sin x + 2$ , etc.  |  |  |  |
|      | 2 <sup>nd</sup> M1 | For a valid attempt at solving a 3TQ quadratic in sine. Methods include factorization, quadratic formula, completion of the square (unlikely here) and calculator. (See notes on page 6 for general principles on awarding this mark) Can use any variable here, $s$ , $y$ , $x$ or $sin x$ , and an attempt to find at least one of the solutions for sin $x$ . This solution may be outside the range for sin $x$ |  |  |  |
|      | 2 <sup>nd</sup> A1 | $\sin x = -\frac{1}{4}$ BY A CORRECT SOLUTION ONLY UP TO THIS POINT. Ignore extra answer  |  |  |  |
|      |                    | of $\sin x = 2$ , but penalise if candidate states an incorrect result. e.g. $\sin x = -2$ .  |  |  |  |
|      | Note               | $\sin x = -\frac{1}{4}$ can be implied by later correct working if no errors are seen.  |  |  |  |
|      | 3rd A1ft           | At least one of awrt 194.5 or awrt 345.5 or awrt 3.4 or awrt 6.0. This is a limited follow through.   |  |  |  |
|      |                    | Only follow through on the error $\sin x = \frac{1}{4}$ and allow for 165.5 special case (as this is equivalent   |  |  |  |
|      |                    | work) This error is likely to earn M1A1M1A0A1A0 so 4/6 or M1A0M1A0A1A0 if the quadratic had a sign slip.  |  |  |  |
|      | 4 <sup>th</sup> A1 | awrt 194.5 and awrt 345.5   |  |  |  |
|      | Note               | If there are any EXTRA solutions inside the range 0 ,, $x < 360^{\circ}$ and the candidate would  |  |  |  |
|      |                    | otherwise score FULL MARKS then withhold the final A1 mark.<br>Ignore EXTRA solutions outside the range 0, $x < 360^{\circ}$ .  |  |  |  |
|      | Special<br>Cases   | Rounding error Allow M1A1M1A1A1A0 for those who give two correct answers but<br>wrong accuracy e.g. awrt 194, 346 (Remove final A1 for this error)<br>Answers in radians:– <b>lose final</b> mark so either or both of 3.4, 6.0 gets A1ftA0<br>It is possible to earn M1A0A1A1 on the final 4 marks if an error results fortuitously in   |  |  |  |
|      |                    | $\sin x = -1/4$ then correct work follows.  |  |  |  |

|                    | 1 <sup>st</sup> A1  | At least one term correctly integrated. Can be simplified. Then isw.   | simplified or un-simplified but power must b  | e           |  |
|                    | 2 <sup>nd</sup> A1  | Both terms correctly integrated. Can be un-sin<br>denominator and power should be a single nur<br>there are errors simplifying. Ignore the omission      | nber. (e.g. 2 – not 1+1) Ignore subsequent we   | ork if      |  |
| (b)                | 1 <sup>st</sup> M1  | 1 <sup>st</sup> M1 Sets $y = 0$ , and reaches the correct $x^{\frac{1}{2}} = 3$ or $x = 9$ (isw if $x^{\frac{1}{2}} = 3$ is followed by $x = \sqrt{3}$ ) |   |             |  |
|                    |   | Just seeing $x = \sqrt{3}$ without the correct $x^{\frac{1}{2}} =$   |   | ,           |  |
|                    |   | Use of trapezium rule to find area is M0A0 as  | hence implies integration needed.   |             |  |
|                    | ddM1 This mark is dependent on the two previous method marks and needs both to have been awarded.<br>Sees the limit 9 substituted in an integrated function. (Do not follow through their value of $x$ ) Do not need to see MINUS 0 but if another value is used as lower limit – this is M0.<br>This mark may be implied by 9 in the limit and a correct answer. |  |   |             |  |
|                    | <b>A1</b> $\frac{243}{10}$ or 24.3  |  |   |             |  |
|                    | <b>Common Error</b> $0 = 3x - x^{\frac{3}{2}} \Rightarrow x^{\frac{1}{2}} = 3 \text{ so } x = \sqrt{3}$   |  |   |             |  |
|                    | Common  | <b>Common Error</b> $0 = 3x - x^2 \implies x^2 = 3$ so   | $x = \sqrt{3}$  |             |  |

| Question<br>Number   | Scheme   | Marks              |
|--|--|--------------------|
| 8(i)   | Two Ways of answering the question are given in part (i)   |                    |
| Way 1  | $\log_3\left(\frac{3b+1}{a-2}\right) = -1$ or $\log_3\left(\frac{a-2}{3b+1}\right) = 1$ Applying the subtraction law of logarithms   | M1                 |
|  | $\frac{3b+1}{a-2} = 3^{-1} \left\{ = \frac{1}{3} \right\} \text{ or } \left( \frac{a-2}{3b+1} \right) = 3$ Making a correct connection between log base 3 and 3 to a power.  | M1                 |
|  | $\{9b+3=a-2 \Rightarrow\} \ b=\frac{1}{9}a-\frac{5}{9}$ $b=\frac{1}{9}a-\frac{5}{9}$ or $b=\frac{a-5}{9}$  | A1 oe              |
|  | In <b>Way 2</b> a correct connection between log base 3 and "3 to a power" is used before applying the subtraction or addition law of logs   | [3]                |
| (i)<br>Way 2   | Either $\log_3(3b+1) - \log_3(a-2) = -\log_3 3$ or $\log_3(3b+1) + \log_3 3 = \log_3(a-2)$   | 2 <sup>nd</sup> M1 |
| ttuj 2   | $\log_3(3b+1) = \log_3(a-2) - \log_3 3 = \log_3\left(\frac{a-2}{3}\right) \text{ or } \log_3 3(3b+1) = \log_3(a-2)$  | 1 <sup>st</sup> M1 |
|  | $\{3b+1=\frac{a-2}{3}\}\ b=\frac{1}{9}a-\frac{5}{9}$   | A1                 |
|  | ······································   | [3]                |
|  | Five Ways of answering the question are given in part (ii)   |                    |
| (ii)   | $32(2^{2x}) - 7(2^x) = 0$ Deals with power 5 correctly giving ×32  | M1                 |
| Way 1<br>See also<br>common<br>approach<br>below in<br>notes | So, $2^x = \frac{7}{32}$ or $y = \frac{7}{32}$ or $y = \frac{7}{32}$ or awrt 0.219   | A1 oe<br>dM1       |
|  | $x \log 2 = \log\left(\frac{7}{32}\right)$ or $x = \frac{\log\left(\frac{7}{32}\right)}{\log 2}$ or $x = \log_2\left(\frac{7}{32}\right)$ A valid method for solving $2^x = \frac{7}{32}$<br>Or $2^x = k$ to achieve $x = \dots$ |                    |
|  | x = -2.192645 awrt $-2.19$   | A1<br>[4]          |
|  |  | [ ]                |
|  | Begins with $2^{2x+5} = 7(2^x)$ (for Way 2 and Way 3) (see notes below)  |                    |
| (ii)<br>Way 2  | Correct application of $(2x + 5)\log 2 = \log 7 + x \log 2$ either the power law or addition law of logarithms   | M1                 |
|  | <b>Correct result</b> after applying   | A1                 |
|  | the power <b>and</b> addition laws of logarithms.<br>$2x \log 2 + 5 \log 2 = \log 7 + x \log 2$  |                    |
|  | $\Rightarrow x = \frac{\log 7 - 5\log 2}{\log 2}$ Multiplies out, collects x terms to achieve $x =$  | dM1                |
|  | x = -2.192645 awrt $-2.19$   | Al                 |
|  | Evidence of $\log_2$ and either $2^{2x+5} \rightarrow 2x+5$  | [4]                |
| (ii)<br>Way 3  | $2x + 5 = \log_2 7 + x$ or $7(2^x) \rightarrow \log_2 7 + \log_2(2^x)$   | M1                 |
|  | $2x + 5 = \log_2 7 + x$ oe.  | A1                 |
|  | $2x - x = \log_2 7 - 5$<br>$\Rightarrow x = \log_2 7 - 5$ Collects x terms to achieve $x = \dots$  | dM1                |
|  | x = -2.192645 awrt -2.19   | A1                 |
|  |  | [4]                |

| (ii)<br>Way 4        | $2^{2x+5} = 7(2^x) \Longrightarrow 2^{x+5} = 7$           |  |     |
|----------------------|---|--|-----|
|                      | $x + 5 = \log_2 7 \text{ or } \frac{\log 7}{\log 2}$      | Evidence of log <sub>2</sub>                                     | M1  |
|                      | $x + 5 = \log_2 7$ or $\frac{2}{\log 2}$                  | and either $2^{x+5} \rightarrow x+5$ or $7 \rightarrow \log_2 7$ |     |
|                      |   | $x + 5 = \log_2 7 $ oe.  | A1  |
|                      | $x = \log_2 7 - 5$  | Rearranges to achieve $x =$                                      | dM1 |
|                      | x = -2.192645   | awrt -2.19   | A1  |
|                      |   |  | [4] |
| Way 5<br>(similar to | $2^{2x+5} = 2^{\log_2 7} (2^x)$                           | 7 is replaced by $2^{\log_2 7}$                                  | M1  |
| Way 3)               | $2x + 5 = \log_2 7 + x$                                   | $2x + 5 = \log_2 7 + x$ oe.                                      | A1  |
|                      | $2x - x = \log_2 7 - 5$<br>$\Rightarrow x = \log_2 7 - 5$ | Collects <i>x</i> terms to achieve $x = \dots$                   | dM1 |
|                      | x = -2.192645   | awrt -2.19   | A1  |
|                      |   |  | [4] |
|                      |   |  | 7   |

|      | Question 8 Notes                          |  |
|------|---|--|
| (i)  | 1 <sup>st</sup> M1                        | Applying either the addition or subtraction law of logarithms correctly to combine   |
|      |   | any <b>two</b> log terms into <b>one</b> log term.   |
|      | 2 <sup>nd</sup> M1                        | For making a correct connection between log base 3 and 3 to a power.   |
|      | A1  | $b = \frac{1}{9}a - \frac{5}{9}$ or $b = \frac{a-5}{9}$ o.e. e.g. Accept $b = \frac{1}{3}\left(\frac{a}{3} - \frac{5}{3}\right)$ but not $b = \frac{a-2}{9} - \frac{3}{9}$ nor $b = \frac{\left(\frac{a}{3} - \frac{5}{3}\right)}{3}$<br>First step towards solution – an equation with one side or other correct or one term dealt with |
| (ii) | 1 <sup>st</sup> M1                        | First step towards solution – an equation with one side or other correct or one term dealt with correctly (see five* possible methods above)   |
|      | 1 <sup>st</sup> A1                        | Completely correct first step – giving a correct equation as shown above   |
|      | dM1                                       | Correct complete method (all log work correct) and working to reach $x =$ in terms of logs   |
|      |   | reaching a correct expression or one where the only errors are slips solving linear equations  |
|      | 2 <sup>nd</sup> A1                        | Accept answers which round to -2.19 If a second answer is also given this becomes A0   |
|      | Special<br>Case in<br>(i)                 | Writes $\frac{\log_3(3b+1)}{\log_3(a-2)} = -1$ and proceeds to $\frac{3b+1}{a-2} = 3^{-1} \left\{ = \frac{1}{3} \right\}$ and to correct answer-Give   |
|      |   | M0M1A1 (special case)  |
|      | Common<br>approach<br>to part<br>(ii)     | Let $2^x = y$ Treat this as <b>Way 1</b> They get $32y^2 - 7y = 0$ for M1 and need to reach $y = \frac{7}{32}$ for A1  |
|      |   | Then back to <b>Way 1</b> as before. Any letter may be used for the new variable which I have called <i>y</i> .  |
|      |   | If they use x and obtain $x = \frac{7}{32}$ , this may be awarded M1A0M0A0   |
|      |   | Those who get $y^2 - 7y + 32 = 0$ or $y^7 - 7y = 0$ will be awarded M0,A0,M0,A0  |
|      | Common<br>Present-<br>ation of<br>Work in | <b>Many begin with</b> $\log(2^{2x+5}) - \log(7(2^x)) = 0$ . It is possible to reach this in two stages  |
|      |   | correctly so do not penalise this and award the full marks if they continue correctly as in Way 2. If however the solution continues with $(2x+5)\log 2 - x\log 14 = 0$ or with  |
|      | ii  | $(2x+5)\log 2 - 7x\log 2 = 0$ (both incorrect) then they are awarded M1A0M0A0 just getting   |
|      |   | credit for the $(2x + 5) \log 2$ term.   |
|      | Note                                      | N.B. The answer (+)2.19 results from "algebraic errors solving linear equations" leading to  |
|      |   | $2^x = \frac{32}{7}$ and gets M1A0M1A0   |

| Question<br>Number | Scheme  | Marks                |
|--------------------|---|----------------------|
| <b>9.</b> (a)      | Area( <i>FEA</i> ) = $\frac{1}{2}x^2\left(\frac{2\pi}{3}\right)$ ; = $\frac{\pi x^2}{3}$<br>$\frac{1}{2}x^2 \times \left(\frac{2\pi}{3}\right)$ or $\frac{120}{360} \times \pi x^2$ simplified or un-                                     | M1                   |
|                    | $\frac{\pi x^2}{3}$   | A1                   |
|                    | Parts (b) and (c) may be marked together  | [2]                  |
| <i>a</i> >         |   | M1                   |

|              |                     | Question 9 Notes   |
|--------------|---------------------|--|
| (a)          | M1                  | Attempts to use Area( <i>FEA</i> ) = $\frac{1}{2}x^2 \times \frac{2\pi}{3}$ (using radian angle) or $\frac{120}{360} \times \pi x^2$ (using angle in   |
|              |                     | degrees)   |
|              | A1                  | $\frac{\pi x^2}{3}$ cao (Must be simplified and be their answer in part (a)) Answer only implies M1A1.   |
|              |                     | N.B. Area( <i>FEA</i> ) = $\frac{1}{2}x^2 \times 120$ is awarded M0A0  |
| (b)          | M1                  | An attempt to sum 3 " areas" consisting of rectangle, triangle and sector (allow slips even in dimensions) but <b>one area</b> should be correct   |
|              | 1 <sup>st</sup> A1  | Correct expression for <b>two</b> of the <b>three</b> areas listed above.  |
|              |                     | Accept any correct equivalents e.g. two correct from $\frac{1}{2}x^2 \sin\left(\frac{\pi}{3}\right)$ or $\frac{1}{4}x^2\sqrt{3}$ , $\frac{1}{2} \times \frac{2}{3}\pi x^2$ , $2xy$   |
|              | 2 <sup>nd</sup> A1* | This is a given answer which should be stated and should be achieved without error so all three areas must have been correct and their sum put equal to 1000 and an intermediate step of rearrangement should be present.                    |
| ( <b>c</b> ) | B1ft                | Correct expression for P from arc length, length AB and three sides of rectangle in terms of box and y with $2y$ (or $y + y$ ), $3x$ (or $x + 2x$ ) (or $x + x + x$ ), and $x\theta$ clearly listed. Allow addition after substitution of y. |
|              |                     | NB $\theta = \frac{2\pi}{3}$ but allow use of their consistent $\theta$ in radians (usually $\theta = \frac{\pi}{3}$ ) from parts (a) and  |
|              |                     | (b) for this mark. $120x$ or $60x$ do not get this mark.   |
|              | M1                  | Substitutes $y = \frac{500}{x} - \frac{x}{24} (4\pi + 3\sqrt{3})$ or their unsimplified attempt at y from earlier (allow   |
|              | A 1*                | slips e.g. sign slips) into 2 <i>y</i> term.   |
|              | A1*                 | This is a given answer which should be stated and should be achieved without error $1000 + \lambda$  |
| ( <b>d</b> ) | 1 <sup>st</sup> M1  | Need to see at least $\frac{1000}{x} \rightarrow \frac{\pm \lambda}{x^2}$  |
|              | 1 <sup>st</sup> A1  | Correct differentiation of both terms (need not be simplified) Not follow through. Allow any correct equivalent.   |
|              |                     | e.g. $\frac{dP}{dx} = -1000x^{-2} + \frac{\pi}{3} + 3 - \frac{\sqrt{3}}{4}$ Also allow $\frac{dP}{dx} = -1000x^{-2} + awrt$ 3.61   |
|              |                     | Check carefully as there are many correct equivalents and some have two terms in $x\pi$ to   |
|              |                     | differentiate obtaining for example $\frac{2\pi}{3} - \frac{8\pi}{24}$ instead of $\frac{\pi}{3}$  |
|              | 2 <sup>nd</sup> M1  | Setting their $\frac{dP}{dx} = 0$ . Do not need to find x, but if inequalities are used this mark cannot be  |
|              |                     | gained until candidate states or uses a value of x without inequalities. May not be explicit but may be implied by correct working and value or expression for x. May result in $x^2 < 0$ so   |
|              | 2 <sup>nd</sup> A1  | M1A0<br>There is no requirement to write down a value for $x$ , so this mark may be implied by a correct<br>value for $P$ . It may be given for a correct expression or value for $x$ of 16.6, 16.7 or 17                                    |
|              | 3 <sup>rd</sup> A1  | Allow answers wrt 120 but not 121  |
| (e)          | M1                  | Finds $P''$ and considers sign. Follow through correct differentiation of their $P'$ (not just reduction of power)   |
|              | A1ft                | Need $\frac{2000}{x^3}$ and > 0 (or positive value) and conclusion. Only follow through on a correct $P''$   |
|              |                     | and a value for x in the range $10 < x < 25$ (need not see x substituted but an x should have been found)  |
|              |                     | If $P$ is substituted then this is awarded M1 A0   |

| Special | (d) Some candidates multiply P by 12 to "simplify" If they write  |
|---------|---|
| case    | $\frac{dP}{dx} = -12000x^{-2} + 4\pi + 36 - 3\sqrt{3}; = 0 \text{ then solve they will get the correct } x \text{ and } P \text{ They}$ |
|         | should be awarded M1A0M1A1A1 in part (d). If they then do part (e) writing  |
|         | $\frac{d^2 P}{dx^2} = \frac{24000}{x^3} > 0 \Rightarrow \text{Minimum They should be awarded M1A0 (so lose 2 marks in all)}$            |
|         | If they wrote $\frac{d(12P)}{dx} = -12000x^{-2} + 4\pi + 36 - 3\sqrt{3}$ ; = 0 etc they could get full marks.                           |
