You must have:

Mathematical Formulae and Statistical Tables (Pink)

Total Marks

--

Calculators may NOT be used in this examination.

Instructions

- Use **black** ink or ball-point pen.
- If pencil is used for diagrams/sketches/graphs it must be dark (HB or B). Coloured pencils and highlighter pens must not be used.
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Answer **all** questions and ensure that your answers to parts of questions are clearly labelled.
- Answer the questions in the spaces provided – *there may be more space than you need.*
- You should show sufficient working to make your methods clear. Answers without working may not gain full credit.

Information

- The total mark for this paper is 75.
- The marks for **each** question are shown in brackets – *use this as a guide as to how much time to spend on each question.*

Advice

- Read each question carefully before you start to answer it.
- Try to answer every question.
- Check your answers if you have time at the end.

PEARSON

4.

Figure 1

Figure 1 shows a sketch of part of the curve with equation $y = f(x)$. The curve has a maximum point A at $(-2, 4)$ and a minimum point B at $(3, -8)$ and passes through the origin O .

On separate diagrams, sketch the curve with equation

(a) $y = 3f(x)$, (2)

(b) $y = f(x) - 4$ (3)

On each diagram, show clearly the coordinates of the maximum and the minimum points and the coordinates of the point where the curve crosses the y -axis.

Q4

(Total 5 marks)

5. Solve the simultaneous equations

$$y + 4x + 1 = 0$$

$$y^2 + 5x^2 + 2x = 0$$

7. Given that

$$y = 3x^2 + 6x^{\frac{1}{3}} + \frac{2x^3 - 7}{3\sqrt{x}}, \quad x > 0$$

find $\frac{dy}{dx}$. Give each term in your answer in its simplified form.

10.

Figure 2

The points $P(0, 2)$ and $Q(3, 7)$ lie on the line l_1 , as shown in Figure 2.

The line l_2 is perpendicular to l_1 , passes through Q and crosses the x -axis at the point R , as shown in Figure 2.

Find

- (a) an equation for l_2 , giving your answer in the form $ax + by + c = 0$, where a , b and c are integers, (5)

- (b) the exact coordinates of R , (2)

- (c) the exact area of the quadrilateral $ORQP$, where O is the origin. (5)

Q10

--	--

(Total 12 marks)

11. The curve C has equation $y = 2x^3 + kx^2 + 5x + 6$, where k is a constant.

- (a) Find $\frac{dy}{dx}$ (2)

The point P , where $x = -2$, lies on C .

The tangent to C at the point P is parallel to the line with equation $2y - 17x - 1 = 0$

Find

- (b) the value of k , (4)
- (c) the value of the y coordinate of P , (2)
- (d) the equation of the tangent to C at P , giving your answer in the form $ax + by + c = 0$, where a , b and c are integers. (2)
