You must have:

Mathematical Formulae and Statistical Tables (Blue)

Total Marks

--

Candidates may use any calculator allowed by the regulations of the Joint Council for Qualifications. Calculators must not have the facility for symbolic algebra manipulation, differentiation and integration, or have retrievable mathematical formulae stored in them.

Instructions

- Use **black** ink or ball-point pen.
- If pencil is used for diagrams/sketches/graphs it must be dark (HB or B). Coloured pencils and highlighter pens must not be used.
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Answer **all** questions and ensure that your answers to parts of questions are clearly labelled.
- Answer the questions in the spaces provided – *there may be more space than you need.*
- You should show sufficient working to make your methods clear. Answers without working may not gain full credit.
- Values from the statistical tables should be quoted in full. When a calculator is used, the answer should be given to an appropriate degree of accuracy.

Information

- The total mark for this paper is 75.
- The marks for **each** question are shown in brackets – *use this as a guide as to how much time to spend on each question.*

Advice

- Read each question carefully before you start to answer it.
- Try to answer every question.
- Check your answers if you have time at the end.

Question 2 continued

(Total 12 marks)

Q2	

3. The random variable X has probability density function given by

$$f(x) = \begin{cases} ax + b & 1 \leq x < 4 \\ \frac{3}{2} - \frac{1}{4}x & 4 \leq x \leq 6 \\ 0 & \text{otherwise} \end{cases}$$

as shown in Figure 1, where a and b are constants.

Figure 1

- (a) Show that the median of X is 4 (2)
- (b) Find the value of a and the value of b (5)
- (c) Specify fully the cumulative distribution function of X (5)

4. In a large population, past records show that 1 in 200 adults has a particular allergy.

In a random sample of 700 adults selected from the population, estimate

(a) (i) the mean number of adults with the allergy,

(ii) the standard deviation of the number of adults with the allergy.

Give your answer to 3 decimal places.

(3)

A doctor claims that the past records are out of date and the proportion of adults with the allergy is higher than the records indicate.

A random sample of 500 adults is taken from the population and 5 are found to have the allergy.

A test of the doctor's claim is to be carried out at the 5% level of significance.

(b) (i) State the hypotheses for this test.

(ii) Using a suitable approximation, carry out the test.

(6)

It is also claimed that 30% of those with the allergy take medication for it daily.

To test this claim, a random sample of n people with the allergy is taken. The random variable Y represents the number of people in the sample who take medication for the allergy daily.

A two-tailed test, at the 1% level of significance, is carried out to see if the proportion differs from 30%

The critical region for the test is $Y = 0$ or $Y \geq w$

(c) Find the smallest possible value of n and the corresponding value of w

(4)

(Total 13 marks)

5. A call centre records the length of time, T minutes, its customers wait before being connected to an agent. The random variable T has a cumulative distribution function given by

$$F(t) = \begin{cases} 0 & t < 0 \\ 0.3t - 0.004t^3 & 0 \leq t \leq 5 \\ 1 & t > 5 \end{cases}$$

- (a) Find the proportion of customers waiting more than 4 minutes to be connected to an agent. (2)

- (b) Given that a customer waits more than 2 minutes to be connected to an agent, find the probability that the customer waits more than 4 minutes. (3)

- (c) Show that the upper quartile lies between 2.7 and 2.8 minutes. (2)

- (d) Find the mean length of time a customer waits to be connected to an agent. (4)

7. The continuous random variable X is uniformly distributed over the interval $[a, b]$

(a) Find an expression, in terms of a and b , for $E(3 - 2X)$ (2)

(b) Find $P(X > \frac{1}{3}b + \frac{2}{3}a)$ (2)

Given that $E(X) = 0$

(c) find an expression, in terms of b only, for $E(3X^2)$ (3)

Given also that the range of X is 18

(d) find $\text{Var}(X)$ (2)
