## Mark Scheme (Results)

GCE

## GCE 08 Physics (6PH01/ 01)

Mark scheme notes

## Underlying principle

The mark scheme will clearly indicate the concept that is being rewarded, backed up by examples. It is not a set of model answers.

For example:

## (iii) Horizontal force of hinge on table top

$66.3(\mathrm{~N})$ or $66(\mathrm{~N})$ and correct indication of direction [no ue] 1
[Some examples of direction: acting from right (to left) / to the left / West
/ opposite direction to horizontal. May show direction by arrow. Do not accept a minus sign in front of number as direction.]

This has a clear statement of the principle for awarding the mark, supported by some examples illustrating acceptable boundaries.

1. Mark scheme format
1.1 You will not see 'wtte' (words to that effect). Alternative correct wording should be credited in every answer unless the ms has specified specific words that must be present. Such words will be indicated by underlining e.g. 'resonance'
1.2 Bold lower case will be used for emphasis.
1.3 Round brackets ( ) indicate words that are not essential e.g. "(hence) distance is increased".
1.4 Square brackets [ ] indicate advice to examiners or examples e.g. [Do not accept gravity] [ecf].
2. Unit error penalties
2.1 A separate mark is not usually given for a unit but a missing or incorrect unit will normally cause the final calculation mark to be lost.
2.2 Incorrect use of case e.g. 'Watt' or 'w' will not be penalised.
2.3 There will be no unit penalty applied in 'show that' questions or in any other question where the units to be used have been given.
2.4 The same missing or incorrect unit will not be penalised more than once within one question.
2.5 Occasionally, it may be decided not to penalise a missing or incorrect unit e.g. the candidate may be calculating the gradient of a graph, resulting in a unit that is not one that should be known and is complex.
2.6 The mark scheme will indicate if no unit error penalty is to be applied by means of [no ue].
3. Significant figures
3.1 Use of an inappropriate number of significant figures in the theory papers will normally only be penalised in 'show that' questions where use of too few significant figures has resulted in the candidate not demonstrating the validity of the given answer.
4. Calculations
4.1 Bald (i.e. no working shown) correct answers score full marks unless in a 'show that' question.
4.2 If a 'show that' question is worth 2 marks then both marks will be available for a reverse working; if it is worth 3 marks then only 2 will be available.
4.3 use of the formula means that the candidate demonstrates substitution of physically correct values, although there may be conversion errors e.g. power of 10 error.
4.4 recall of the correct formula will be awarded when the formula is seen or implied by substitution.
4.5 The mark scheme will show a correctly worked answer for illustration only.
4.6 Example of mark scheme for a calculation:
'Show that' calculation of weight
Use of $L \times W \times H$
Substitution into density equation with a volume and density
Correct answer [49.4 (N)] to at least 3 sig fig. [No ue]
[If 5040 g rounded to 5000 g or 5 kg , do not give $3^{\text {rd }}$ mark; if conversion to kg is omitted and then answer fudged, do not give $3^{\text {rd }}$ mark]
[Bald answer scores 0, reverse calculation 2/3]
Example of answer:
$80 \mathrm{~cm} \times 50 \mathrm{~cm} \times 1.8 \mathrm{~cm}=7200 \mathrm{~cm}^{3}$
$7200 \mathrm{~cm}^{3} \times 0.70 \mathrm{~g} \mathrm{~cm}^{-3}=5040 \mathrm{~g}$
$5040 \times 10^{-3} \mathrm{~kg} \times 9.81 \mathrm{~N}$ kg
$=49.4 \mathrm{~N}$
5. Quality of Written Communication
5.1 Indicated by QoWC in mark scheme. QWC-Work must be clear and organised in a logical manner using technical wording where appropriate.
5.2 Usually it is part of a max mark.
6. Graphs
6.1 A mark given for axes requires both axes to be labelled with quantities and units, and drawn the correct way round.
6.2 Sometimes a separate mark will be given for units or for each axis if the units are complex. This will be indicated on the mark scheme.
6.3 A mark given for choosing a scale requires that the chosen scale allows all points to be plotted, spreads plotted points over more than half of each axis and is not an awkward scale e.g. multiples of 3,7 etc.
6.4 Points should be plotted to within 1 mm .

- Check the two points furthest from the best line. If both OK award mark.
- If either is 2 mm out do not award mark.
- If both are 1 mm out do not award mark.
- If either is 1 mm out then check another two and award mark if both of these OK, otherwise no mark.
6.5 For a line mark there must be a thin continuous line which is the best-fit line for the candidate's results.

Unit 16PH01_01

| Question <br> Number | Answer | Mark |
| :--- | :--- | :---: |
| 1 | A | 1 |
| 2 | C | 1 |
| 3 | B | 1 |
| 4 | B | 1 |
| 5 | A | 1 |
| 6 | D | 1 |
| 7 | C | 1 |
| 8 | B | 1 |
| 9 | C | 1 |
| 10 | B | 1 |

| Question Number | Answer | Mark |
| :---: | :---: | :---: |
| 11(a) | Show that the resultant force on the rocket is about $4 \times 10^{6} \mathrm{~N}$ <br> Use of $W=m g(1)$ <br> State or use resultant force $=$ upward force - weight (1) <br> Correct answer to at least 2 s.f. [ $4.2 \times 10^{6} \mathrm{~N}$ ] (1) [no ue] <br> Example of calculation $\begin{aligned} & \mathrm{W}=\mathrm{mg} \\ & \mathrm{~W}=3.04 \times 10^{6} \mathrm{~kg} \times 9.81 \mathrm{~kg} \mathrm{~m} \mathrm{~s}^{-2} \\ & =2.98 \times 10^{7} \mathrm{~N} \end{aligned}$ $\text { Resultant force }=3.4 \times 10^{7} \mathrm{~N}-2.98 \times 10^{7} \mathrm{~N}=4.2 \times 10^{6} \mathrm{~N}$ | 3 |
| 11(b) | Calculate the initial acceleration. <br> Use of $F=m a(1)$ <br> Correct answer [ $1.38 \mathrm{~m} \mathrm{~s}^{-2}$ ] (1) [ecf] <br> Example of calculation $\begin{aligned} & a=F / m \\ & =4.2 \times 10^{6} \mathrm{~N} / 3.04 \times 10^{6} \mathrm{~kg} \\ & =1.38 \mathrm{~m} \mathrm{~s}^{-2} \end{aligned}$ | 2 |
| 11(c) | Calculate the average acceleration. <br> Use of $v=u+a t$ (1) <br> Correct answer [ $15.9 \mathrm{~m} \mathrm{~s}^{-2}$ ] (1) [beware same unit error as part b not penalised] <br> Example of calculation $\begin{aligned} & a=(v-u) / t \\ & =\left(2390 \mathrm{~m} \mathrm{~s}^{-1}-0\right) / 150 \mathrm{~s} \\ & =15.9 \mathrm{~m} \mathrm{~s}^{-2} \end{aligned}$ | 2 |
| 11(d) | Suggest a reason for the difference in the values of acceleration calculated. <br> e.g. Mass decreasing / weight decreasing / net upward force increasing / fuel used up / gets lighter / $g$ decreasing / air resistance decreasing with altitude (1) | 1 |
|  | Total for question | 8 |

| Question <br> Number | Answer | Mark |
| :--- | :--- | :---: |
| 12 (a) | Explain what is meant by each of the following terms |  |
| limit of proportionality -stress proportional to strain / obeys Hooke's |  |  |
| law / Force proportional to extension up to this point (1) |  |  |
| tensile strength - greatest stress before fracturing (1) |  |  |
| yield point -point at which plastic deformation begins / point at |  |  |
| which material shows a larger increase in strain for a smaller increase |  |  |
| in stress (1) |  |  |$\quad$| Mark 'limit of proportionality' and the 'yield point' on the graph. |
| :--- |
| 12 (b) |
| L shown at end of linear part (1) <br> Y shown beyond L and up to maximum stress (1) | | Total for question |
| :--- |

| Question <br> Number | Answer | Mark |
| :--- | :--- | :---: |
| 13(a) | Describe what is meant by: <br> laminar flow -no abrupt change in direction or speed of flow / air <br> flows in layers/ flowlines/ streamlines with no mixing (1) <br> turbulent flow -mixing of layers / contains eddies / abrupt changes in <br> speed or direction (1) | 2 |
| 13(b) | Add to the diagram <br> laminar flow shown - at least 3 continuous lines (1) <br> turbulent flow shown -eddies / layers crossing over (1) |  |
| 3(c) | Explain how this would increase the range of the ball. <br> (smaller area of turbulent flow $\rightarrow$ ) less resistive force (1) |  |
| Less kinetic energy dissipated / kinetic energy dissipated at lower <br> rate / less work done against air resistance / less deceleration (1) | 2 |  |
|  | Total for question | 2 |

| Question Number | Answer | Mark |
| :---: | :---: | :---: |
| 14(a) | What is meant by Newton's first law. <br> reference to constant velocity OR rest and uniform motion in a straight line (1) <br> reference to zero resultant force / unbalanced force (1) <br> (examples: $\Delta \mathrm{v}=0$ if $\Sigma \mathrm{F}=0 ; \Delta \mathrm{v}=0$ unless $\Sigma \mathrm{F} \neq 0$ ) | 2 |
| 14(b) (i) | State 2 ways in which the forces in the pair are identical. <br> 2 of magnitude, type of force, line of action, time of action (1) (1) | 2 |
| $\begin{array}{\|l} \hline 14(\mathrm{~b}) \\ \text { (ii) } \end{array}$ | State 2 ways in which the forces in the pair differ. <br> Opposite direction, act on different bodies (1) (1) | 2 |
| $\begin{aligned} & \hline \begin{array}{l} 14(\mathrm{~b}) \\ (\mathrm{iii}) \end{array} \end{aligned}$ | Describe the force that Newton's third law identifies as the pair of this force. <br> car exerts upward/ opposite force on Earth (the different points) (1) gravitational and 12000 N equal (the identical points) (1) [no ue] | 2 |
|  | Total for question | 8 |

| Question <br> Number | Answer | Mark |
| :--- | :--- | :---: |
| 15 a | Describe how you could measure $g$ <br> QWC-Work must be clear and organised in a logical manner using <br> technical wording where appropriate <br> Max 6 marks <br> state sufficient quantities to be measured (e.g. sand $t$ OR $v, u$ and $t$ <br> OR $u, v$ and $s)$ ) (1) <br> relevant apparatus (includes ruler and timer/ data logger/ light gates) <br> (1) <br> describe how a distance is measured (1) <br> describe how a speed or time is measured (1) <br> further detail of measurement of speed or time (1) <br> vary for described quantities and plot appropriate graph (1) <br> state how result calculated (1) <br> repeat and mean (one mark max for any relevant quantity/ result) (1) <br> Precaution -a precaution relating to experimental procedure (1) | Max 6 |
| $15 b$ | 1 |  |

| Question Number | Answer | Mark |
| :---: | :---: | :---: |
| 16(a) | Calculate the resistive forces <br> State component of $T=T \cos \theta(1)$ Correct answer [1120 N] (1) <br> Example of calculation $\begin{aligned} & T=T \cos \theta \\ & =1150 \mathrm{~N} \times \cos 12^{\circ} \\ & =1125 \mathrm{~N} \end{aligned}$ <br> Therefore resistive forces $=1125 \mathrm{~N}$ | 2 |
| 16(b) | Calculate the work done on the boat by the horse <br> Use of $\Delta W=F \Delta s$ (1) <br> Correct answer [558 000 J$]$ (1) [ecf] <br> Example of calculation $\begin{aligned} & \Delta W=F \Delta s \\ & =1125 \mathrm{~N} \times 500 \mathrm{~m} \\ & =560000 \mathrm{~J} \end{aligned}$ | 2 |
| 16(c) | Explain using a longer rope <br> Longer rope $\rightarrow$ smaller angle (1) <br> cos theta then larger / need smaller force (for same component acting on boat) (1) | 2 |
|  | Total for question | 6 |

| Question <br> Number | Answer | Mark |
| :--- | :--- | :---: |
| $17(\mathrm{a})$ | Correct the diagram <br> Parabolic path shown (1) [allow for moderate effects of air resistance] | 1 |
| 17b) | Explain why a projectile follows the path you have drawn. <br> state horizontal speed constant / air resistance negligible (1) <br> horizontal motion independent of vertical motion / unaffected by <br> gravity (1) <br> state downwards acceleration / downward force acting / gravity acts <br> on vertical motion (1) | 3 |
| $17(\mathrm{c})$ | Explain why the balloon follows this path. <br> QWC-Work must be clear and organised in a logical manner using <br> technical wording where appropriate <br> Air resistance high (1) <br> so balloon decelerates horizontally also (1) <br> from max height/ when speed zero it falls (vertically) (1) | 3 |
|  | Total for question | 7 |

| Question Number | Answer | Mark |
| :---: | :---: | :---: |
| 18(a) | Add labelled arrows to show the other forces on the submarine. <br> Label upthrust, weight and viscous drag: 3 correct (2), 1 or 2 correct (1) <br> (Accept unambiguous single letter labels, e.g. U, W and V/ F/ D/ VD) <br> (Accept $m g$ for weight but do not accept 'gravity') | 2 |
| 18(b) | State two equations to show the relationship between the forces <br> Upthrust $=(-)$ Weight (1) <br> Thrust $=(-)$ Viscous drag (1) | 2 |
| 18(c) | Show that the submarine has a weight of about $7 \times 10^{7} \mathrm{~N}$. <br> Use of density $=m / V(1)$ <br> Correct answer [ $7.2 \times 10^{7} \mathrm{~N}$ to at least 2 s.f.] (1) [no ue] <br> Example of calculation <br> calculate weight of water as $\mathrm{U}=\mathrm{W}$ <br> $m=$ density $\times$ volume $=1030 \mathrm{~kg} \mathrm{~m}^{-3} \times 7100 \mathrm{~m}^{3}$ <br> $=7.3 \times 10^{6} \mathrm{~kg}$ $\begin{aligned} & \mathrm{W}=\mathrm{mg} \\ & \mathrm{~W}=7.3 \times 10^{6} \mathrm{~kg} \times 9.81 \mathrm{Nkg}^{-1} \\ & =7.2 \times 10^{7} \mathrm{~N} \end{aligned}$ | 2 |

| 18(d) (i) | Explain what is meant by compressive strain. <br> decrease in length / original length (1) | 1 |
| :--- | :--- | :---: |
| 18(d) <br> (ii) | Explain the action that should be taken <br> pump out water / replace water in tanks with air (1) <br> to decrease weight (accept mass) / to compensate for decreased <br> upthrust / to make density the same as water (1) | 2 |
| 18(d) <br> (iii) | Suggest why a material like fibreglass would be unsuitable <br> QWC - Work must be clear and organised in a logical manner using <br> technical wording where appropriate |  |
|  | A much greater (compressive) strain will be produced / compresses <br> more easily (1) <br> producing a larger decrease in volume/ upthrust/ deformation (1) | 2 |
|  | Total for question | 11 |

| Question Number | Answer | Mark |
| :---: | :---: | :---: |
| 19(a) (i) | Explain the shape of the graph in the part labelled $A B$ <br> Force proportional to extension / obeys Hooke's law (1) | 1 |
| $\begin{array}{\|l} \hline 19(\mathrm{a}) \\ \text { (ii) } \end{array}$ | Explain what is happening in the part of the graph labelled CD. <br> Fully compressed / coils closed (accept cup/ bug/toy touches base) (1) | 1 |
| 19(b) | Show that the stiffness of the spring is about $1000 \mathrm{~N} \mathrm{~m}^{-1}$. <br> State $k=1 /$ gradient or use of values in $k=F / x(1)$ <br> Correct answer to at least 2 s.f. [1100 $\mathrm{N} \mathrm{m}^{-1}$ ] (1) <br> (Values from graph must be within half a square) <br> (Accept $1000 \mathrm{~N} \mathrm{~m}^{-1}$ to only 1 s.f. if the answer given by the values used from the graph is $1.0 \times 10^{3} \mathrm{~N} \mathrm{~m}^{-1}$ to 2 s.f.) <br> Example of calculation $\begin{aligned} & k=F / x \\ & =20 \mathrm{~N} / 0.019 \mathrm{~m} \\ & =1050 \mathrm{Nm}^{-1} \end{aligned}$ | 2 |
| 19(c) (i) | Calculate the energy stored in the spring at this stage <br> State area under graph or use of energy $=1 / 2$ F $\Delta x$ or state energy $=$ $1 / 2 k x^{2}$ (1) <br> correct answer [0.17 J] (1) [ecf for $k$ ] <br> (Values from graph must be within half a square) <br> Example of calculation $\begin{aligned} & \text { energy }=1 / 2 \mathrm{~F} \Delta x \\ & =1 / 2 \times 19.2 \mathrm{~N} \times 0.018 \mathrm{~m} \\ & =0.17 \mathrm{~J} \end{aligned}$ | 2 |

| 19(c) <br> (ii) | Calculate the maximum height reached by the bug. <br> Use of gpe $=m g h(1)$ <br> correct answer [2.4 m] (1) [ecf] <br> Example of calculation <br> $0.17 \mathrm{~J}=m \mathrm{gh}$ <br> $h=0.17 \mathrm{~m} / 7.3 \times 10^{-3} \mathrm{~kg} \times 9.81 \mathrm{~N} \mathrm{~kg}$ <br> -1 <br> $=2.4 \mathrm{~m}$ | 2 |
| :--- | :--- | :---: |
| 19(c) <br> (iii) | State an assumption made in your calculation <br> all elastic pe $\rightarrow$ ke of bug $\rightarrow$ gpe of bug (2 out of 3) / <br> all stored energy (of the spring) transferred to the 'toy' / <br> no energy lost due to air resistance (1) |  |
| $19(\mathrm{~d})$ | Explain the advantage of using the video camera <br> improves accuracy/ reliability/ precision (1) <br> eliminate reaction time in looking / can slow down and stop (to take <br> reading) etc (1) | 1 |
| $19(\mathrm{e})$ | Comment on this data <br> Has not included 0.36 / has not included the anomalous result / <br> 0.36 is anomalous/ outlier etc (1) | 2 |
|  | Total for question |  |
