**PAPER 2: Biological Psychology, Learning Theories
and Development**

You do not need any other materials.

Total Marks

Instructions

- Use **black** ink or ball-point pen.
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Answer **all** questions.
- Answer the questions in the spaces provided – *there may be more space than you need.*

Information

- The total mark for this paper is 96.
- The marks for **each** question are shown in brackets – *use this as a guide as to how much time to spend on each question.*
- The list of formulae and statistical value tables are printed at the start of this paper.
- Candidates may use a calculator.

Advice

- Read each question carefully before you start to answer it.
- Check your answers if you have time at the end.
- Good luck with your examination.

| 30 | 36.25 | 40.26 | 43.77 | 46.98 | 50.89 | 59.70 |
| 40 | 47.27 | 51.81 | 55.76 | 59.34 | 63.69 | 73.40 |
| 50 | 58.16 | 63.17 | 67.51 | 71.42 | 76.15 | 86.66 |
| 60 | 68.97 | 74.40 | 79.08 | 83.30 | 88.38 | 99.61 |
| 70 | 79.72 | 85.53 | 90.53 | 95.02 | 100.43 | 112.32 |

The calculated value must be equal to or exceed the critical value in this table for significance to be shown.

Wilcoxon Signed Ranks test process

- Calculate the difference between two scores by taking one from the other
- Rank the differences giving the smallest difference Rank 1

Note: do not rank any differences of 0 and when adding the number of scores, do not count those with a difference of 0, and ignore the signs when calculating the difference

- Add up the ranks for positive differences
- Add up the ranks for negative differences
- T is the figure that is the smallest when the ranks are totalled (may be positive or negative)
- N is the number of scores left, ignore those with 0 difference

Critical values for the Wilcoxon Signed Ranks test

| <i>n</i> | Level of significance for a one-tailed test | | |
|----------|---|-------|------|
| | 0.05 | 0.025 | 0.01 |
| | Level of significance for a two-tailed test | | |
| | 0.1 | 0.05 | 0.02 |
| N=5 | 0 | – | – |
| 6 | 2 | 0 | – |
| 7 | 3 | 2 | 0 |
| 8 | 5 | 3 | 1 |
| 9 | 8 | 5 | 3 |
| 10 | 11 | 8 | 5 |
| 11 | 13 | 10 | 7 |
| 12 | 17 | 13 | 9 |

The calculated value must be equal to or less than the critical value in this table for significance to be shown.

- 7 Mackenzie carried out an observation with children aged two years old. He aimed to see how many boys did or did not play with a doll and how many girls did or did not play with a doll.

Once he had collected his results he wanted to carry out a chi-squared test on his data. Some of his calculations are shown in **Table 2**.

| | | Observed | Expected | O-E | (O-E) ² | (O-E) ² /E |
|-------|--------------------------|----------|----------|----------------------|--------------------|-----------------------|
| Boys | Did play with a doll | 6 | 6.5 | -0.5 | 0.25 | |
| | Did not play with a doll | 4 | 3.5 | 0.5 | 0.25 | |
| Girls | Did play with a doll | 7 | 6.5 | 0.5 | 0.25 | |
| | Did not play with a doll | 3 | 3.5 | -0.5 | 0.25 | |
| | | | | Chi-squared = | | |

Table 2

- (a) Calculate the chi-squared for the data gathered by Mackenzie in his observation by completing **Table 2**.

You **must** give your answer to **two** decimal places.

(2)

Space for calculations

- (b) Mackenzie gathered his sample of two-year-old children through opportunity sampling.

Describe how Mackenzie may have gathered his opportunity sample of two-year-old children.

(2)

.....

.....

.....

.....

.....

.....

- (c) Mackenzie did not find a significant difference in his first observation. He decided to repeat the observation but used boys and girls aged seven years old.

He calculated chi-squared for the second observation and found a calculated value of 3.68.

Explain whether Mackenzie found a significant difference at $p \leq 0.05$, using a two-tailed (non-directional) test where $df = 1$.

The formulae and statistical tables can be found at the front of this paper.
