International GCSE (9–1)

Tuesday 14 May 2019

Afternoon (Time: 2 hours)

Paper Reference **4BI1/1B 4SD0/1B**

Biology

Unit: 4BI1

Science (Double Award) 4SD0

Paper: 1B

You must have:

Calculator, ruler

Total Marks

Instructions

- Use **black** ink or ball-point pen.
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Answer **all** questions.
- Answer the questions in the spaces provided – *there may be more space than you need.*
- Show all the steps in any calculations and state the units.
- Some questions must be answered with a cross in a box ☒. If you change your mind about an answer, put a line through the box ☒ and then mark your new answer with a cross ☒.

Information

- The total mark for this paper is 110.
- The marks for **each** question are shown in brackets – *use this as a guide as to how much time to spend on each question.*

Advice

- Read each question carefully before you start to answer it.
- Write your answers neatly and in good English.
- Try to answer every question.
- Check your answers if you have time at the end.

Pearson

Answer ALL questions.

1 This is a three-dimensional diagram of a plant cell.

(a) Name the structures labelled A, B, C, and D.

(4)

A

B

C

D

(b) Structure E is a chloroplast.

Chloroplasts are not found in animal cells.

(i) Give the letter of another structure shown in the diagram but not found in animal cells.

(1)

.....

DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA

BLANK PAGE

2 The photograph shows a type of fish called a salmon.

(Source: © Alexander Rath/Shutterstock)

Some humans eat salmon as a source of protein.

Protein is a component of a balanced diet.

(a) Which statement describes what happens to salmon protein in the human stomach?

(1)

- A it is digested into amino acids
- B its surface area is increased by bile
- C its pH is raised by hydrochloric acid
- D it is absorbed by villi

(b) The table lists other components of a balanced diet and their functions.

Complete the table by giving a function of each component.

The first one has been done for you.

(3)

| Component | Function |
|-----------|-----------------|
| lipid | store of energy |
| vitamin D | |
| iron | |
| fibre | |

(c) A student investigates the effect of genetic modification on the growth of salmon.

The student measures the mass and length of one normal salmon and one genetically modified salmon when both salmon are 18 months old.

The table shows the student's results.

| Type of salmon | Mass in g | Length in cm |
|----------------------|-----------|--------------|
| normal | 1250 | 33 |
| genetically modified | 3000 | 61 |

(i) It is recommended that a 15-year-old person needs 50 g of protein per day for a balanced diet.

A normal salmon contains 20% protein.

Calculate how many 15-year-olds can have their recommended daily allowance of protein supplied by the 18-month-old normal salmon.

(2)

number =

(ii) The student concludes that his results show that genetically modified (GM) salmon are useful in providing a balanced diet.

Discuss the student's conclusion.

(d) The passage describes the role of enzymes involved in the genetic modification of salmon. Complete the passage by writing a suitable word in each space.

(3)

All salmon contain a length of DNA called a, which controls the production of growth hormone. Another length of DNA, from a different species of fish, is cut out using a enzyme. This DNA is then joined to the salmon DNA using an enzyme called

This causes the salmon to produce growth hormone at all times.

BLANK PAGE

5 Wheat seeds contain stores of a large insoluble molecule.

This molecule is digested by amylase as the seeds germinate.

(a) What is the name of this large insoluble molecule?

(1)

- A glucose
- B lipid
- C protein
- D starch

(b) A student investigates the oxygen absorbed by germinating seeds at different temperatures.

The diagram shows some of the student's apparatus.

(i) Suggest why the student opens the tap after obtaining one set of results. (2)

.....

.....

.....

.....

(ii) What is the function of the soda lime? (1)

- A it absorbs carbon dioxide
- B it absorbs oxygen
- C it releases carbon dioxide
- D it releases oxygen

(iii) The student measures the distance moved by the coloured liquid and converts this to volume of oxygen absorbed.

The volume of oxygen absorbed can be calculated using the formula

$$\text{volume} = \pi \times \text{radius}^2 \times \text{distance}$$

Calculate the volume of oxygen absorbed when the coloured liquid moves a distance of 6.0 mm.

[diameter of tube = 1.0 mm]

(3)

volume = cm³

6 The diagram shows a sperm cell from a rat.

(a) (i) Describe the role of a sperm cell. (1)

.....

.....

(ii) Describe the structures found in part B. (2)

.....

.....

.....

.....

(iii) Explain why part A contains many mitochondria. (2)

.....

.....

.....

.....

(b) Nicotine is a chemical found in cigarettes.

A scientist investigates how nicotine affects sperm cells.

The scientist gives male rats different concentrations of nicotine.

He then calculates the percentage of damaged sperm cells in the semen produced by each rat.

The table shows his results.

| Concentration of nicotine in mg per kg of rat | Percentage of damaged sperm cells (%) |
|--|--|
| 0.0 | 6.4 |
| 0.5 | 16.8 |
| 1.0 | 24.8 |

- (i) The sample of semen from a rat given a nicotine concentration of 1.0 mg per kg contains 5.8×10^7 sperm cells.

Calculate the number of damaged sperm cells in this sample.

(2)

number =

(ii) The scientist concludes that cigarette smoking could make male humans infertile.
Discuss this conclusion.

7 (a) A student investigates the sugar content of four different fruit juices.

This is the student's method.

- add 5 cm³ of fruit juice to a boiling tube
- add 5 cm³ of Benedict's solution to the boiling tube
- place the boiling tube in a water bath at 70°C for three minutes
- remove the boiling tube and record the colour of the solution

The student uses this method for each of the four fruit juices.

The table shows the student's results.

| Fruit juice | Colour of solution after heating for three minutes |
|-------------|--|
| A | blue |
| B | brick red |
| C | yellow |
| D | green |

(i) Give two variables that the student controls in his investigation.

(2)

1

2

(ii) Give the juices A, B, C and D in order of sugar content, from highest to lowest.

(2)

highest

lowest

(iii) The student is now given sugar solutions with concentrations of 1%, 5%, 10% and 20%.

Explain how the student could use these solutions to estimate the concentration of sugar in the four fruit juices.

BLANK PAGE

8 A scientist investigates the effect of exercise on breathing rate.

She measures the breathing rate in breaths per minute of two people, P and Q, every 5 minutes for 30 minutes.

This is her method.

- measure their breathing rate every 5 minutes while they exercise for 20 minutes
- measure their breathing rate every 5 minutes for a further 10 minutes while they recover from the exercise

The table shows her results.

| Time in minutes | Breathing rate in breaths per minute | |
|-----------------|--------------------------------------|----------|
| | Person P | Person Q |
| 0 | 12 | 15 |
| 5 | 20 | 24 |
| 10 | 22 | 24 |
| 15 | 25 | 23 |
| 20 | 24 | 20 |
| 25 | 16 | 19 |
| 30 | 12 | 15 |

(a) (i) Plot a line graph of the results for person P and person Q.
Use a ruler to join your points with straight lines.

(6)

(ii) Explain the change in breathing rate during exercise.

10 (a) Animals produce hormones to communicate between cells.

(i) Which hormone causes the development of secondary sexual characteristics in girls? (1)

- A adrenaline
- B oestrogen
- C progesterone
- D testosterone

(ii) Which hormone causes an increased blood flow to the muscles during exercise? (1)

- A adrenaline
- B insulin
- C progesterone
- D testosterone

(iii) Which of these is a correct statement about hormones? (1)

- A they always produce short-term changes
- B they are carried by neurones
- C they are transported in the plasma
- D they always produce a rapid response

(b) Plants produce plant growth substances such as auxin.

Suggest why some biologists do not consider auxin to be a hormone. (2)
