

Mark Scheme (Results)

January 2022

Pearson Edexcel International GCSE
In Chemistry Science (Double Award) (4SD0)
Paper 1C

## **Edexcel and BTEC Qualifications**

Edexcel and BTEC qualifications are awarded by Pearson, the UK's largest awarding body. We provide a wide range of qualifications including academic, vocational, occupational and specific programmes for employers. For further information visit our qualifications websites at <a href="www.edexcel.com">www.edexcel.com</a> or <a href="www.edexcel.com">www.edexcel.com</a>, you can get in touch with us using the details on our contact us page at <a href="www.edexcel.com/contactus">www.edexcel.com/contactus</a>.

## Pearson: helping people progress, everywhere

Pearson aspires to be the world's leading learning company. Our aim is to help everyone progress in their lives through education. We believe in every kind of learning, for all kinds of people, wherever they are in the world. We've been involved in education for over 150 years, and by working across 70 countries, in 100 languages, we have built an international reputation for our commitment to high standards and raising achievement through innovation in education. Find out more about how we can help you and your students at: <a href="https://www.pearson.com/uk">www.pearson.com/uk</a>

## **General Marking Guidance**

- All candidates must receive the same treatment. Examiners must mark the first candidate in exactly the same way as they mark the last.
- Mark schemes should be applied positively. Candidates must be rewarded for what they have shown they can do rather than penalised for omissions.
- Examiners should mark according to the mark scheme not according to their perception of where the grade boundaries may lie.
- There is no ceiling on achievement. All marks on the mark scheme should be used appropriately.
- All the marks on the mark scheme are designed to be awarded.
   Examiners should always award full marks if deserved, i.e. if the answer matches the mark scheme. Examiners should also be prepared to award zero marks if the candidate's response is not worthy of credit according to the mark scheme.
- Where some judgement is required, mark schemes will provide the principles by which marks will be awarded and exemplification may be limited.
- When examiners are in doubt regarding the application of the mark scheme to a candidate's response, the team leader must be consulted.
- Crossed out work should be marked UNLESS the candidate has replaced it with an alternative response.

| Questio<br>numbe |       | Answer                                   | Notes                          | Marks       |
|------------------|-------|--|--------------------------------|-------------|
| 1 (a)            | (i)   | chromatography                           |                                | 1           |
|                  | (ii)  | fractional distillation                  |                                | 1           |
|                  | (iii) | simple distillation                      |                                | 1           |
| (b)              |       | M1 two / different elements              | ALLOW (two) different atoms    | 2           |
|                  |       | M2 (chemically) joined / bonded together | ALLOW a description of bonding |             |
| (c)              | (i)   | 4  |                                | 1           |
|                  | (ii)  | 20                                       |                                | 1           |

|   |          | (iv)  | eye protection / wear safety glasses / goggles                                     |                                      | <b>'</b>    |
|   |          |       | wear gloves  |                                      |             |
|   |          |       | apron / lab coat   |                                      |             |
|   |          |       |  | ALLOW put a bung / cork in both ends |             |
|   |          |       |  | Total for questio                    | n = 7 marks |

| Quest |       | Answer  | Notes  | Marks       |
|-------|-------|---|--|-------------|
| numb  |       |   | Notes  |             |
| 4 (a) | (i)   | Any one from:   |  | 1           |
|       |       | to increase the rate of reaction                            |  |             |
|       |       | to give the particles enough energy to react                | ALLOW because copper<br>does not react with<br>oxygen when copper is<br>cold<br>ALLOW so that copper<br>will react with oxygen |             |
|       | (ii)  | because Ar does not (readily) gain / lose / share electrons | ACCEPT argon has a full<br>outer shell / valence<br>shell of electrons   | 1           |
|       | (iii) | copper(II) oxide  | ALLOW copper oxide<br>REJECT copper(I) oxide   | 1           |
| (b)   | (i)   | results are the same (at the end)                           | ALLOW results stop decreasing  | 1           |
|       | (ii)  | M1 volume oxygen = 20 cm <sup>3</sup>                       |  | 3           |
|       |       | M2 total volume = 253 cm <sup>3</sup>                       |  |             |
|       |       | M3 (20÷253)×100 = 7.9%                                      | ALLOW correct evaluation from M1 and M2 ALLOW any number of significant figures REJECT incorrect rounding                      |             |
|       |       |   | Correct answer of 7.9% with or without working scores 3  |             |
|       | (iii) | Any one from:   |  | 1           |
|       |       | there is a leak in the apparatus                            |  |             |
|       |       | temperature was not the same for all readings               |  |             |
|       |       | the apparatus was not left to cool (to room temperature)    |  |             |
|       |       |   | IGNORE not all oxygen reacted  |             |
|       |       |   | Total for question   | n = 8 marks |

| Quest                |           | Answer  | Notes   | Marks        |
|----------------------|-----------|---|---|--------------|
| <b>numb</b><br>5 (a) | er<br>(i) | relative mass proton 1  | All 4 correct scores 2  |              |
| 3 (a)                | (.)       | relative mass neutron 1   | 2 or 3 correct scores 1   | 2            |
|                      |           |   |   |              |
|                      |           | relative charge proton +1   |   |              |
|                      |           | relative charge neutron 0   |   |              |
| (b)                  | (i)       | M1 <u>atoms</u> (of the same element) with the same number of protons | ALLOW <u>atoms</u> with the same atomic number ALLOW <u>atoms</u> with the same number of electrons | 2            |
|                      |           | M2 but different numbers of neutrons                                  | ALLOW but different mass numbers  |              |
|                      | (ii)      | M1 number of protons and electrons = 12                               |   | 2            |
|                      |           | M2 number of neutrons = 14  |   |              |
|                      |           |   |   |              |

|                      |           | $\frac{(24 \times 79) + (25 \times 10) + (26 \times 11)}{100}$        |   |              |
|                      |           | 100   |   |              |
|                      |           | scores 2 marks  |   |              |
|                      |           | M1 multiplies each mass number by the percentages                     |   |              |
|                      |           | M2 adds multiples together and divides by 100                         |   |              |
|                      |           |   | (24 x 0.79) + (25 x 0.10)<br>+ (26 x 0.11) scores<br>both marks                                     |              |
|                      | (iv)      | M1 24.32÷(6.022×10 <sup>23</sup> )                                    |   | 2            |
|                      |           | $M2\ 4.039 \times 10^{-23}$   | ALLOW ecf from M1 as<br>long as answer is given<br>to 4 sig figs                                    |              |
|                      |           |   | Correct answer of 4.039 × 10 <sup>-23</sup> g to 4 sig sigs scores 2 with or without working        |              |
| (c)                  |           | (moles of MgO) = 0.40   |   | 1            |
|                      |           |   | Total for qu  | ostion = 11  |
|                      |           |   | rotat for qu  | 162CIOH = 11 |

| Question number | Answer  | Notes   | Marks |
|-----------------|---|---|-------|
| 6 (a)           | Any three from:   |   | 3     |
|                 | M1 sodium (atom) loses electron(s)                      |   |       |
|                 | M2 oxygen (atom) gains electron(s)                      |   |       |
|                 | M3 sodium loses 1 electron AND oxygen gains 2 electrons |   |       |
|                 | OR  |   |       |
|                 | M3 (both atoms become ions with configuration) 2.8      |   |       |
|                 |   | any mention of sharing of electrons scores 0                            |       |
| (b)             | 62  |   | 1     |
| (c)             | Any two from:   |   | 2     |
|                 | M1 (sodium oxide has) ions / (giant) ionic structure    |   |       |
|                 | M2 ions / electrons cannot flow / move                  |   |       |
|                 | M3 no delocalised electrons                             |   |       |
| (d)             | M1 flame test   | ALLOW any description of a flame test                                   | 2     |
|                 | M2 yellow colour  | ALLOW orange or<br>yellow-orange<br>M2 dep on M1 or<br>mention of flame |       |
| (e)             | $2Na_2O \rightarrow 2Na + Na_2O_2$                      |   | 1     |

| Question        | Answer   | Notes  | Marks |
|-----------------|--|--|-------|
| number<br>7 (a) | С  |  | 1     |
|                 | C is the correct answer because a precipitate of calcium sulfate will form in tube 1, no precipitate will form in tube 2 as both products are soluble in water and a precipitate of copper(II) carbonate will form in tube 3.  A, B and D are not the correct answers as no precipitate will form in tube 2. |  |       |
| (b) (i)         | white  |  | 1     |
| (b) (ii)        | Any five from:   |  | 5     |
|                 | M1 filter  |  |       |
|                 | M2 heat/boil (the solution)  |  |       |
|                 | M3 to evaporate some of the water  | ALLOW until crystals<br>form on the end of a<br>glass rod<br>ALLOW until crystals<br>first start to form<br>ALLOW until the<br>solution is saturated |       |
|                 | M4 leave / cool (to crystallise)   | M4 dep on M2   |       |
|                 | M5 pour off excess liquid <b>OR</b> filter (to obtain crystals)  | M5 dep on crystals<br>having been formed   |       |
|                 |  | IGNORE references to washing   |       |
|                 | M6 suitable method of drying the crystals  | e.g. place in (warm) oven / leave to dry (in warm place) / use filter paper / kitchen towel / / desiccator   |       |
|                 |  | If solution heated to dryness or left to evaporate all of the water only M1 and M2 can be awarded.   |       |
|                 |  | If method produces silver chloride only M1 and M6 can be awarded   |       |
| (iii)           | any one from:  |  | 1     |

| to make sure the silver nitrate and sodium chloride fully reacted  | ALLOW so all the reactants react OR so nothing left unreacted OR so neither reagent is in excess  |  |  |  |
|--|---|--|--|--|
| to make sure the products only contained silver chloride and sodium nitrate to ensure the highest possible yield |   |  |  |  |
|  | ALLOW to make sure the sodium nitrate (crystals) would be pure ALLOW If either solution were in excess, it would contaminate the sodium nitrate OWTTE |  |  |  |
| Total for question = 8 marks   |   |  |  |  |

| Quest |       | Answer   | Notes  | Marks |

| toxic / greenhouse gases are produced when burned |                    |            |
|   | Total for question | = 15 marks |

| Question number | Answer   | Notes   | Marks |
|-----------------|--|---|-------|
| 9 (a)           | M1 to prevent acid splashing out OR so only (carbon dioxide) gas leaves the flask                              | IGNORE solid leaving<br>the flask<br>REJECT prevents gas<br>escaping                              | 2     |
|                 | M2 so the decrease in mass is close to the actual value OR so that the decrease in mass is only due to the gas |   |       |
| (b)             | M1 CaCO <sub>3</sub> (s) + 2HCl(aq)  |   | 2     |
|                 | M2 $H_2O(l) + CO_2(g)$   |   |       |
| (c) (i)         | the hydrochloric acid has all reacted  |   | 1     |
| (ii)            | mass stays the same / stops decreasing   | ALLOW effervescence /<br>fizzing stops<br>ALLOW the curve levels<br>off                           | 1     |
| (iii            | M1 0.98  |   | _     |
|                 | M2 (0.98÷44) = 0.022   | ALLOW any number of significant figures REJECT incorrect rounding ALLOW M1÷44                     | 2     |
|                 |  | Correct answer of 0.022 moles with or without working scores 2 marks                              |       |
| (iv)            | M1 tangent shown on graph  |   |       |
|                 | M2 method of calculating gradient (change in y ÷ change in x)  |   | 3     |
|                 | M3 rate of reaction in g/s   | ALLOW ECF from M2   |       |
|                 |  | Answer of 0.005 - 0.006 with a tangent shown on the graph scores 3 with or without other working. |       |

|         |  | Answer of 0.015g/s (the average rate of reaction for the first 60s scores 1)                                     |   |
|---------|--|--|---|
| (d) (i) | M1 the rate of reaction increases as the percentage concentration increases        |  | 2 |
|         | M2 the rate of reaction is (directly) proportional to the percentage concentration | M2 subsumes M1   |   |
| (ii)    | M1 change in number of particles (per unit volume)                                 | ALLOW particles are<br>closer together or<br>further apart   | 2 |
|         | M2 change in collisions per unit time  | ALLOW change in<br>frequency of collisions<br>REJECT increased /<br>changed energy / speed<br>Total for question |   |
