N10/5/MATME/SP2/ENG/TZ0/XX/M

International Baccalaureate® Baccalauréat International Bachillerato Internacional

MARKSCHEME

November 2010

MATHEMATICS

Standard Level

Paper 2

15 pages

This markscheme is **confidential** and for the exclusive use of examiners in this examination session.

It is the property of the International Baccalaureate and must **not** be reproduced or distributed to any other person without the authorization of IB Cardiff.

Instructions to Examiners

Abbreviations

- *M* Marks awarded for attempting to use a correct **Method**; working must be seen.
- (M) Marks awarded for Method; may be implied by correct subsequent working.
- *A* Marks awarded for an **Answer** or for **Accuracy**; often dependent on preceding *M* marks.
- (A) Marks awarded for an Answer or for Accuracy; may be implied by correct subsequent working.
- *R* Marks awarded for clear **Reasoning**.
- *N* Marks awarded for **correct** answers if **no** working shown.
- AG Answer given in the question and so no marks are awarded.

Using the markscheme

1 General

Mark according to scoris instructions and the document "Mathematics SL: Guidance for e-marking November 2010". It is essential that you read this document before you start marking. In particular, please note the following.

Marks must be recorded using the annotation stamps. Please check that you are entering marks for the right question.

- If a part is **completely correct**, (and gains all the 'must be seen' marks), use the ticks with numbers to stamp full marks.
- If a part is completely wrong, stamp *A0* by the final answer.
- If a part gains anything else, it **must** be recorded using **all** the annotations.

All the marks will be added and recorded by scoris. Do not enter marks directly into the mark entry box.

2 Method and Answer/Accuracy marks

- Do **not** automatically award full marks for a correct answer; all working **must** be checked, and marks awarded according to the markscheme.
- It is generally not possible to award *M0* followed by *A1*, as *A* mark(s) depend on the preceding *M* mark(s), if any. An exception to this rule is when work for *M1* is missing, as opposed to incorrect (see point 4.)
- Where *M* and *A* marks are noted on the same line, *e.g. M1A1*, this usually means *M1* for an **attempt** to use an appropriate method (*e.g.* substitution into a formula) and *A1* for using the **correct** values.
- Where there are two or more *A* marks on the same line, they may be awarded independently; so if the first value is incorrect, but the next two are correct, award *A0A1A1*.
- Where the markscheme specifies (M2), N3, etc., do not split the marks, unless there is a note. (Example 1)
- Once a correct answer to a question or part-question is seen, ignore further working.

3 N marks

If no working shown, award N marks for correct answers. In this case, ignore mark breakdown (M, A, R).

- Do **not** award a mixture of *N* and other marks.
- There may be fewer N marks available than the total of M, A and R marks; this is deliberate as it penalizes candidates for not following the instruction to show their working.
- There may not be a direct relationship between the *N* marks and the implied marks. There are times when all the marks are implied, but the *N* marks are not the full marks: this indicates that we want to see some of the working, without specifying what.
- For consistency within the markscheme, *N* marks are noted for every part, even when these match the mark breakdown.
- If a candidate has incorrect working, which somehow results in a correct answer, do **not** award the *N* marks for this correct answer. However, if the candidate has indicated (usually by crossing out) that the working is to be ignored, award the *N* marks for the correct answer.

4 Implied and must be seen marks

Implied marks appear in brackets e.g. (M1).

- Implied marks can only be awarded if **correct** work is seen or if implied in subsequent working (a correct answer does not necessarily mean that the implied marks are all awarded).
- Normally the correct work is seen or implied in the next line.
- Where there is an (M1) followed by A1 for each correct answer, if no working shown, one correct answer is sufficient evidence to award the (M1). (Example 2)

Must be seen marks appear without brackets e.g. M1.

- Must be seen marks can only be awarded if **appropriate** work is seen.
- If a must be seen mark is not awarded because work is missing (as opposed to *M0* or *A0* for incorrect work) all subsequent marks may be awarded if appropriate.

5 Follow through marks (only applied after an error is made)

Follow through (FT) marks are awarded where an incorrect answer from one part of a question is used correctly in subsequent part(s) or subpart(s). Usually, to award FT marks, there must be working present and not just a final answer based on an incorrect answer to a previous part. However, if the only marks awarded in a subpart are for the answer (i.e. there is no working expected), then FT marks should be awarded if appropriate.

- Within a question part, once an **error** is made, no further *A* marks can be awarded for work which uses the error, but *M* marks may be awarded if appropriate. (However, as noted above, if an *A* mark is not awarded because work is missing, all subsequent marks may be awarded if appropriate.)
- If the question becomes much simpler because of an error then use discretion to award fewer *FT* marks.
- If the error leads to an inappropriate value (*e.g.* probability greater than 1, use of r > 1 for the sum of an infinite GP, $\sin \theta = 1.5$, non integer value where integer required), do not award the mark(s) for the final answer(s).
- The markscheme may use the word "their" in a description, to indicate that candidates may be using an incorrect value. Example 3
- Exceptions to this rule will be explicitly noted on the markscheme.
- If a candidate makes an error in one part, but gets the correct answer(s) to subsequent part(s), award marks as appropriate, unless the question says hence. It is often possible to use a different approach in subsequent parts that does not depend on the answer to previous parts. (Example 3)

6 Mis-read

If a candidate incorrectly copies information from the question, this is a mis-read (**MR**). Apply a **MR** penalty of 1 mark to that question. Award the marks as usual and then stamp **MR** against the answer. Scoris will automatically deduct 1 mark from the question total. A candidate should be penalized only once for a particular mis-read. Do not stamp **MR** again for that question, unless the candidate makes another mis-read.

- If the question becomes much simpler because of the *MR*, then use discretion to award fewer marks.
- If the *MR* leads to an inappropriate value (*e.g.* probability greater than 1, use of r > 1 for the sum of an infinite GP, $\sin \theta = 1.5$, non integer value where integer required), do not award the mark(s) for the final answer(s).
- Miscopying of candidates' own work does **not** constitute a misread, it is an error.

7 Discretionary marks (d)

An examiner uses discretion to award a mark on the rare occasions when the markscheme does not cover the work seen. The mark should be labelled (d) and a brief **note** written next to the mark explaining this decision.

8 Alternative methods

Candidates will sometimes use methods other than those in the markscheme. Unless the question specifies a method, other correct methods should be marked in line with the markscheme. If in doubt, contact your team leader for advice.

- Alternative methods for complete questions are indicated by METHOD 1, METHOD 2, etc.
- Alternative solutions for part-questions are indicated by **EITHER** ... **OR**.
- Where possible, alignment will also be used to assist examiners in identifying where these alternatives start and finish.

9 Alternative forms

Unless the question specifies otherwise, accept equivalent forms.

- As this is an international examination, accept all alternative forms of **notation**.
- In the markscheme, equivalent **numerical** and **algebraic** forms will generally be written in brackets immediately following the answer.
- In the markscheme, **simplified** answers, (which candidates often do not write in examinations), will generally appear in brackets. Marks should be awarded for either the form preceding the bracket or the form in brackets (if it is seen). (Example 4)

10 Accuracy of Answers

If the level of accuracy is specified in the question, a mark will be allocated for giving the answer to the required accuracy.

- Rounding errors: only applies to final answers not to intermediate steps.
- Level of accuracy: when this is not specified in the question the general rule applies to final answers: unless otherwise stated in the question all numerical answers must be given exactly or correct to three significant figures.

Candidates should be penalized once only IN THE PAPER for an accuracy error (AP). Award the marks as usual then stamp (AP) against the answer. Scoris will automatically deduct 1 mark from the paper total. Please see section E in the guidance document which clearly explains, with the use of screenshots, how this works in scoris.

- If a final correct answer is incorrectly rounded, apply the AP.
- If the level of accuracy is not specified in the question, apply the *AP* for correct final answers not given to three significant figures.
- Intermediate values are sometimes written as 3.24(741). This indicates that using 3.24 (or 3.25) is acceptable, but the more accurate value is 3.24741. The digits in brackets are not required for the marks. If candidates work with fewer than three significant figures, this could lead to an *AP*.
- Do not accept unfinished numerical answers such as 3/0.1 (unless otherwise stated). As a rule, numerical answers with more than one part (such as fractions) should be given using integers (*e.g.* 6/8).

If there is no working shown, and answers are given to the correct two significant figures, apply the AP with the N marks for correct two significant figures answers. However, do not accept answers to one significant figure without working.

11 Crossed out work

If a candidate has drawn a line through work on their examination script, or in some other way crossed out their work, do not award any marks for that work.

12 Calculators

A GDC is required for paper 2, but calculators with symbolic manipulation features (e.g. TI-89) are not allowed.

Calculator notation

The Mathematics SL guide says:

Students must always use correct mathematical notation, not calculator notation.

Do **not** accept final answers written using calculator notation. However, do not penalize the use of calculator notation in the working.

13 Style

The markscheme aims to present answers using good communication, e.g. if the question asks to find the value of k, the markscheme will say k = 3, but the marks will be for the correct value 3 – there is usually no need for the "k =". In these cases, it is also usually acceptable to have another variable, as long as there is no ambiguity in the question, e.g. if the question asks to find the value of p and of q, then the student answer needs to be clear. Generally, the only situation where the full answer is required is in a question which asks for equations – in this case the markscheme will say "must be an equation".

The markscheme often uses words to describe what the marks are for, followed by examples, using the e.g. notation. These examples are not exhaustive, and examiners should check what candidates have written, to see if they satisfy the description. Where these marks are M marks, the examples may include ones using poor notation, to indicate what is acceptable. (Example 5)

-7- N10/5/MATME/SP2/ENG/TZ0/XX/M

EXAMPLES

Please check the references in the instructions above.

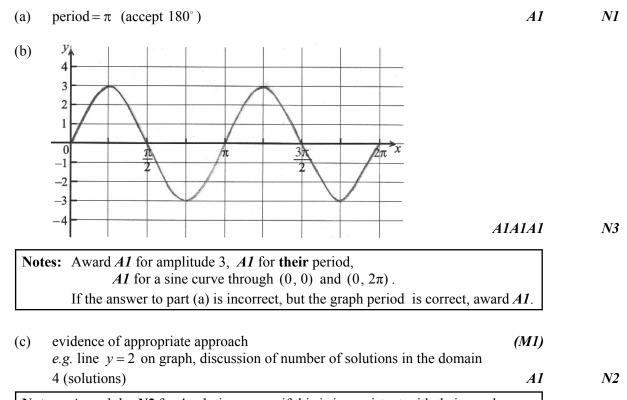

EXAMPLE 1

(a)	evidence of using $\sum p_i = 1$	(M1)	
	correct substitution	<i>A1</i>	
	<i>e.g.</i> $10k^2 + 3k + 0.6 = 1$, $10k^2 + 3k - 0.4 = 0$		
	k = 0.1	A2	N2
No	te: Award <i>A1</i> for a final answer of $k = 0.1$, $k = -0.4$.		
(b)	evidence of using $E(X) = \sum p_i x_i$	(M1)	
	correct substitution	(A1)	
	<i>e.g.</i> $-1 \times 0.2 + 2 \times 0.4 + 3 \times 0.3$		
	E(X) = 1.5	A1	N2
No	te: Award FT marks only on values of k between 0 and 1.		

EXAMPLE 2

(a) intercepts when $f(x) = 0$	(M1)	
Note: 1 correct answer seen is sufficient evidence to award the <i>(M1)</i> .]	
(1.54, 0) $(4.13, 0)$ (accept $x = 1.54$ $x = 4.13$)	AIAI	N3

EXAMPLE 3

Notes: Award the N2 for 4 solutions, even if this is inconsistent with their graph. Award M1A1 FT for incorrect answers which are consistent with their graph.

EXAMPLE 4

for differentiating $f(x) = 2\sin(5x-3)$, the markscheme gives: $f'(x) = (2\cos(5x-3))5$ (=10cos(5x-3)) Award A1 for $(2\cos(5x-3))5$, even if $10\cos(5x-3)$ is not seen.

EXAMPLE 5

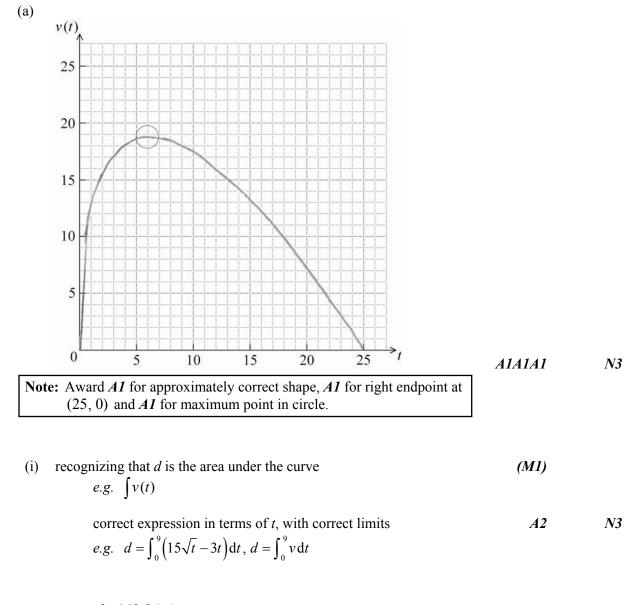

(i)	evidence of approach	M1
	e.g. $\overrightarrow{AO} + \overrightarrow{OB} = \overrightarrow{AB}$, $B - A$	

SECTION A

QUESTION 1

(a)	$\sigma = 1.61$	A2	N2
(b)	median $= 4.5$	A1	NI
(c)	$Q_1 = 3, Q_3 = 5$ (may be seen in a box plot)	(A1)(A1)	
	IQR = 2 (accept any notation that suggests the interval 3 to 5)	A1	N3
			[6 marks]

QUESTION 2

(ii)
$$d = 148.5$$
 (m) (accept 149 to 3 sf) A1 N1

[7 marks]

(b)

(a)
$$d=2$$
 A1 N1

(b) (i)
$$5+2n=115$$
 (A1)

(ii)
$$u_1 = 7$$
 (may be seen in above) (A1)

correct substitution into formula for sum of arithmetic series (A1)
e.g.
$$S_{55} = \frac{55}{2}(7+115), S_{55} = \frac{55}{2}(2(7)+54(2)), \sum_{k=1}^{55}(5+2k)$$

 $S_{55} = 3355$ (accept 3360) A1 N3

[6 marks]

QUESTION 4

correct substitutions for $v \cdot w$; $ v $; $ w $	(A1)(A1)(A1)	
<i>e.g.</i> $2k + (-3) \times (-2) + 6 \times 4$, $2k + 30$; $\sqrt{2^2 + (-3)^2 + 6^2}$, $\sqrt{49}$; $\sqrt{k^2 + 6^2}$	$\overline{(-2)^2+4^2}$, $\sqrt{k^2+20}$	
evidence of substituting into the formula for scalar product e.g. $\frac{2k+30}{7 \times \sqrt{k^2+20}}$	(M1)	
correct substitution e.g. $\cos \frac{\pi}{3} = \frac{2k+30}{7 \times \sqrt{k^2+20}}$	A1	
k = 18.8	A2	<i>N</i> 5
		[7 marks]

QUESTION 5

(a)	attempt to substitute points into the function e.g. $-8 = p(-2)^3 + q(-2)^2 + r(-2)$, one correct equation	(M1)	
	-8 = -8p + 4q - 2r, $-2 = p + q + r$, $0 = 8p + 4q + 2r$	AIAIAI	N4
(b)	attempt to solve system <i>e.g.</i> inverse of a matrix, substitution	(M1)	
	p = 1, q = -1, r = -2	A2	N3
Not	tes: Award <i>A1</i> for two correct values.If no working shown, award <i>N0</i> for two correct values.		

[7 marks]

(a)	correct substitution into the formula for the area of a triangle	A1	
	<i>e.g.</i> $\frac{1}{2} \times 5 \times 13.6 \times \sin C = 20$, $\frac{1}{2} \times 5 \times h = 20$		
	attempt to solve	(M1)	
	<i>e.g.</i> $\sin C = 0.5882, \sin C = \frac{8}{13.6}$		
	$\hat{C} = 36.031^{\circ}$ (0.6288 radians)	(A1)	
	$\hat{ACB} = 144^{\circ}$ (2.51 radians)	A1	N3
(b)	evidence of choosing the cosine rule	(M1)	
	correct substitution	A1	
	<i>e.g.</i> $(AB)^2 = 5^2 + 13.6^2 - 2(5)(13.6)\cos 143.968$		
	AB = 17.9	A1	N2
			[7 marks]

QUESTION 7

(a)	valid approach e.g. $f''(x) = 0$, the max and min of f' gives the points of inflexion on f	R1	
	-0.114, 0.364 (accept (-0.114, 0.811) and (0.364, 2.13))	AIA1	NINI
(b)	METHOD 1		
	graph of g is a quadratic function	R1	N1
	a quadratic function does not have any points of inflexion	R1	N1
	METHOD 2		
	graph of g is concave down over entire domain	<i>R1</i>	N1
	therefore no change in concavity	R1	N1
	METHOD 3		
	g''(x) = -144	<i>R1</i>	N1
	therefore no points of inflexion as $g''(x) \neq 0$	R1	N1
			[5 marks]

SECTION B

QUESTION 8

evidence of valid approach (a) (M1) e.g. f(x) = 0, graph a = -1.73, b = 1.73 $(a = -\sqrt{3}, b = \sqrt{3})$ AIA1 *N3* [3 marks] attempt to find max (M1) (b) e.g. setting f'(x) = 0, graph c = 1.15 (accept (1.15, 1.13)) *A1* N2 [2 marks] (c) attempt to substitute either limits or the function into formula M1 e.g. $V = \pi \int_0^c [f(x)]^2 dx$, $\pi \int [x \ln(4-x^2)]^2$, $\pi \int_0^{1.149...} y^2 dx$ V = 2.16A2 N2 [3 marks] valid approach recognizing 2 regions (d) (M1) e.g. finding 2 areas correct working (A1) e.g. $\int_{0}^{-1.73...} f(x) dx + \int_{0}^{1.149...} f(x) dx$; $-\int_{-1.73...}^{0} f(x) dx + \int_{0}^{1.149...} f(x) dx$ area = 2.07 (accept 2.06) A2*N3* [4 marks] Total [12 marks]

(a)	(i)	valid approach	(M1)	
		<i>e.g.</i> np , $5 \times \frac{1}{5}$ E(X)=1	A1	N2
	(ii)	evidence of appropriate approach involving binomial e.g. $X \sim B\left(5, \frac{1}{5}\right)$	(M1)	
		recognizing that Mark needs to answer 3 or more questions correctly <i>e.g.</i> $P(X \ge 3)$	(A1)	
		valid approach e.g. $1 - P(X \le 2)$, $P(X = 3) + P(X = 4) + P(X = 5)$	M1	
		P(pass) = 0.0579	A1	N3 [6 marks]
(b)	(i)	evidence of summing probabilities to 1 <i>e.g.</i> $0.67 + 0.05 + (a + 2b) + + 0.04 = 1$	(M1)	
		some simplification that clearly leads to required answer <i>e.g.</i> $0.76 + 4a + 2b = 1$	A1	
		4a + 2b = 0.24	AG	NØ
	(ii)	correct substitution into the formula for expected value <i>e.g.</i> $0(0.67) + 1(0.05) + + 5(0.04)$	(A1)	
		some simplification <i>e.g.</i> $0.05 + 2a + 4b + + 5(0.04) = 1$	(A1)	
		correct equation e.g. $13a + 5b = 0.75$	A1	
		evidence of solving	(M1)	
		a = 0.05, b = 0.02	AIAI	N4 [8 marks]
(c)		ppt to find probability Bill passes $P(Y \ge 3)$	(M1)	
		ct value 0.19 is more likely to pass)	A1 A1	N0 [3 marks]
			Total	[17 marks]

Total [17 marks]

(a)	valid approach <i>e.g.</i> 15 mins is half way, top of the wheel, $d + 1$	(M1)	
	height = 101 (metres)	A1	N2 [2 marks]
(b)	evidence of identifying rotation angle after 6 minutes e.g. $\frac{2\pi}{5}$, $\frac{1}{5}$ of a rotation, 72°	Al	
	evidence of appropriate approach <i>e.g.</i> drawing a right triangle and using cosine ratio	(M1)	
	correct working (seen anywhere) e.g. $\cos \frac{2\pi}{5} = \frac{x}{50}$, 15.4(508)	A1	
	evidence of appropriate method e.g. height = radius $+1-15.45$	<i>M1</i>	
	height = 35.5 (metres) (accept 35.6)	A1	N2 [5 marks]

continued ...

Question 10 continued

(c) METHOD 1

evidence of substituting into
$$b = \frac{2\pi}{\text{period}}$$
 (M1)

correct substitution

e.g. period = 30 minutes,
$$b = \frac{2\pi}{30}$$
 A1

$$b = 0.209 \left(\frac{\pi}{15}\right) \qquad \qquad A1 \qquad N2$$

substituting into
$$h(t)$$
 (M1)
e.g. $h(0) = 1, h(15) = 101$

correct substitution
$$A1$$

 $1 = 50 \sin\left(-\frac{\pi}{15}c\right) + 51$

[6 marks]

METHOD 2

evidence of setting up a system of equations	(M1)	
two correct equations e.g. $1 = 50 \sin b (0-c) + 51$, $101 = 50 \sin b (15-c) + 51$	AIAI	
attempt to solve simultaneously <i>e.g.</i> evidence of combining two equations	(M1)	
$b = 0.209 \left(\frac{\pi}{15}\right), \ c = 7.5$	AIAI	N2N2
		[6 marks]
evidence of solving $h(t) = 96$ <i>e.g.</i> equation, graph	(M1)	
t = 12.8 (minutes)	A2	N3 [3 marks]
	Total	[16 marks]

(d)
