Topic: Politics and government

IT system: using hand-held computers, wireless network and central database

For many years car owners in the state of Western Australia had to purchase a registration sticker each year to register their car with the state Government. They were required to display this sticker on the windscreen of their car. It is illegal to drive an unregistered car. The car's registration number is included on the sticker.

[Car image: from http://protechtor.com/index.htm, 1 October 2010]

- Cutting-edge technology, used by West Australian police, has now made car registration stickers obsolete. When car owners pay the annual registration fee, instead of receiving a registration sticker, their details are added to the car registration database and they just receive a receipt. They can check their car registration expiry date at any time on the state Government website at www.transport.wa.gov.au/licensing.
- Previously, if police officers wanted to check if a car had the correct registration sticker, they had to call the police headquarters on their car radio and give the car's registration number. They then waited while someone ran a search for that registration number using a computer in the police headquarters to link to the car registration database.

A police superintendent (senior police officer) commented: "Today the police officers just type in a registration number on their hand-held computer and within seconds they will have all of the information associated with that car and its owner."

With the new technology, which is currently limited to the city areas, police officers can do over six million searches per year.

As well as retrieving the expiry date of registration they can find out other information including the car's owner, previous owners, registration status, and the engine number.

If the owner of the car has an unpaid driving fine, or is wanted by the police for some other reason, this will also be highlighted on the system and the police officer will stop the driver.

The police officer said: "We can also do detailed searches on people, we can access the criminal records of every person in Western Australia, we can bring up their photos."

As the hand-held computers have inbuilt global positioning, the police superintendent can immediately find the location of any of the police officers by using an electronic mapping system.
