

## FURTHER MATHEMATICS STANDARD LEVEL PAPER 1

Friday 4 May 2012 (afternoon)

1 hour

# INSTRUCTIONS TO CANDIDATES

- Do not open this examination paper until instructed to do so.
- Answer all questions.
- Unless otherwise stated in the question, all numerical answers should be given exactly or correct to three significant figures.
- A graphic display calculator is required for this paper.
- A clean copy of the *Mathematics HL and Further Mathematics SL* information booklet is required for this paper.
- The maximum mark for this examination paper is [60 marks].

Full marks are not necessarily awarded for a correct answer with no working. Answers must be supported by working and/or explanations. In particular, solutions found from a graphic display calculator should be supported by suitable working, e.g. if graphs are used to find a solution, you should sketch these as part of your answer. Where an answer is incorrect, some marks may be given for a correct method, provided this is shown by written working. You are therefore advised to show all working.

#### 1. [Maximum mark: 11]

- The set  $S_1 = \{2, 4, 6, 8\}$  and  $\times_{10}$  denotes multiplication modulo 10. (a)
  - (i) Write down the Cayley table for  $\{S_1, \times_{10}\}$ .
  - Show that  $\{S_1, \times_{10}\}$  is a group. (ii)
  - (iii) Show that this group is cyclic.
- Now consider the group  $\{S_2, \times_{20}\}$  where  $S_2 = \{1, 9, 11, 19\}$  and  $\times_{20}$  denotes (b) multiplication modulo 20. Giving a reason, state whether or not  $\{S_1, \times_{10}\}$  and [3 marks]  $\{S_2, \times_{20}\}$  are isomorphic.

#### 2. [Maximum mark: 7]

- Express the number 47502 as a product of its prime factors. [2 marks] (a)
- (b) The positive integers M, N are such that gcd(M, N) = 63and lcm(M, N) = 47502. Given that M is even and M < N, find the two possible pairs of values for M, N. [5 marks]

#### 3. [Maximum mark: 13]

- (a) By evaluating successive derivatives at x=0, find the Maclaurin series for  $\ln \cos x$  up to and including the term in  $x^4$ . [8 marks]
- Consider  $\lim_{x\to 0} \frac{\ln \cos x}{x^n}$ , where  $n \in \mathbb{R}$ . (b)

Using your result from (a), determine the set of values of *n* for which

- (i) the limit does not exist;
- the limit is zero; (ii)
- (iii) the limit is finite and non-zero, giving its value in this case. [5 marks]

2212-7101

[8 marks]

### **4.** [Maximum mark: 7]

The diagram below shows a quadrilateral ABCD and a straight line which intersects (AB), (BC), (CD), (DA) at the points P, Q, R, S respectively.

### **5.** [Maximum mark: 13]

Bill buys two biased coins from a toy shop.

- (a) The shopkeeper claims that when one of the coins is tossed, the probability of obtaining a head is 0.6. Bill wishes to test this claim by tossing the coin 250 times and counting the number of heads obtained.
  - (i) State suitable hypotheses for this test.
  - (ii) He obtains 140 heads. Find the *p*-value of this result and determine whether or not it supports the shopkeeper's claim at the 5 % level of significance. [6 marks]
- (b) Bill tosses the other coin a large number of times and counts the number of heads obtained. He correctly calculates a 95 % confidence interval for the probability that when this coin is tossed, a head is obtained. This is calculated as [0.35199, 0.44801] where the end-points are correct to five significant figures. Determine
  - (i) the number of times the coin was tossed;
  - (ii) the number of heads obtained.

2212-7101

[7 marks]

Turn over

# **6.** [Maximum mark: 9]

- (a) Using mathematical induction or otherwise, prove that the number (1020)<sub>n</sub>, that is the number 1020 written with base n, is divisible by 3 for all values of n greater than 2.
- (b) Explain briefly why the case n = 2 has to be excluded. [1 mark]
