## MARKSCHEME

November 2014

# MATHEMATICS <br> SETS, RELATIONS AND GROUPS 

Higher Level

## Paper 3

This markscheme is confidential and for the exclusive use of examiners in this examination session.

It is the property of the International Baccalaureate and must not be reproduced or distributed to any other person without the authorization of the IB Assessment Centre.

## Instructions to Examiners

## Abbreviations

$\boldsymbol{M}$ Marks awarded for attempting to use a correct Method; working must be seen.
(M) Marks awarded for Method; may be implied by correct subsequent working.
$\boldsymbol{A} \quad$ Marks awarded for an Answer or for Accuracy; often dependent on preceding $\boldsymbol{M}$ marks.
(A) Marks awarded for an Answer or for Accuracy; may be implied by correct subsequent working.
$\boldsymbol{R}$ Marks awarded for clear Reasoning.
$\boldsymbol{N} \quad$ Marks awarded for correct answers if no working shown.
$\boldsymbol{A} \boldsymbol{G}$ Answer given in the question and so no marks are awarded.

## Using the markscheme

## 1

## General

Mark according to RM" Assessor instructions and the document "Mathematics HL: Guidance for emarking November 2014". It is essential that you read this document before you start marking. In particular, please note the following:

- Marks must be recorded using the annotation stamps. Please check that you are entering marks for the right question.
- If a part is completely correct, (and gains all the "must be seen" marks), use the ticks with numbers to stamp full marks.
- If a part is completely wrong, stamp $\boldsymbol{A 0}$ by the final answer.
- If a part gains anything else, it must be recorded using all the annotations.
- All the marks will be added and recorded by $\mathrm{RM}^{\mathrm{TM}}$ Assessor.

## 2 Method and Answer/Accuracy marks

- Do not automatically award full marks for a correct answer; all working must be checked, and marks awarded according to the markscheme.
- It is not possible to award $\boldsymbol{M 0}$ followed by $\boldsymbol{A 1}$, as $\boldsymbol{A} \operatorname{mark}(\mathrm{s})$ depend on the preceding $\boldsymbol{M} \operatorname{mark}(\mathrm{s})$, if any.
- Where $\boldsymbol{M}$ and $\boldsymbol{A}$ marks are noted on the same line, eg M1A1, this usually means $\boldsymbol{M 1}$ for an attempt to use an appropriate method (eg substitution into a formula) and $\boldsymbol{A 1}$ for using the correct values.
- Where the markscheme specifies (M2), N3, etc., do not split the marks.
- Once a correct answer to a question or part-question is seen, ignore further working.

## $N$ marks

Award $\boldsymbol{N}$ marks for correct answers where there is no working.

- Do not award a mixture of $\boldsymbol{N}$ and other marks.
- There may be fewer $\boldsymbol{N}$ marks available than the total of $\boldsymbol{M}, \boldsymbol{A}$ and $\boldsymbol{R}$ marks; this is deliberate as it penalizes candidates for not following the instruction to show their working.

## Implied marks

Implied marks appear in brackets eg (M1), and can only be awarded if correct work is seen or if implied in subsequent working.

- Normally the correct work is seen or implied in the next line.
- Marks without brackets can only be awarded for work that is seen.

## Follow through marks

Follow through (FT) marks are awarded where an incorrect answer from one part of a question is used correctly in subsequent part(s). To award FT marks, there must be working present and not just a final answer based on an incorrect answer to a previous part.

- If the question becomes much simpler because of an error then use discretion to award fewer $\boldsymbol{F T}$ marks.
- If the error leads to an inappropriate value (eg $\sin \theta=1.5$ ), do not award the mark(s) for the final answer(s).
- Within a question part, once an error is made, no further dependent $\boldsymbol{A}$ marks can be awarded, but $\boldsymbol{M}$ marks may be awarded if appropriate.
- Exceptions to this rule will be explicitly noted on the markscheme.

## Mis-read

If a candidate incorrectly copies information from the question, this is a mis-read (MR). A candidate should be penalized only once for a particular mis-read. Use the MR stamp to indicate that this has been a misread. Then deduct the first of the marks to be awarded, even if this is an $\boldsymbol{M}$ mark, but award all others so that the candidate only loses one mark.

- If the question becomes much simpler because of the $\boldsymbol{M R}$, then use discretion to award fewer marks.
- If the $\boldsymbol{M R}$ leads to an inappropriate value ( $e g \sin \theta=1.5$ ), do not award the mark(s) for the final answer(s).

## Discretionary marks (d)

An examiner uses discretion to award a mark on the rare occasions when the markscheme does not cover the work seen. In such cases the annotation DM should be used and a brief note written next to the mark explaining this decision.

Alternative methods
Candidates will sometimes use methods other than those in the markscheme. Unless the question specifies a method, other correct methods should be marked in line with the markscheme. If in doubt, contact your team leader for advice.

- Alternative methods for complete questions are indicated by METHOD 1, METHOD 2, etc.
- Alternative solutions for part-questions are indicated by EITHER . . . OR.
- Where possible, alignment will also be used to assist examiners in identifying where these alternatives start and finish.

## 9 Alternative forms

Unless the question specifies otherwise, accept equivalent forms.

- As this is an international examination, accept all alternative forms of notation.
- In the markscheme, equivalent numerical and algebraic forms will generally be written in brackets immediately following the answer.
- In the markscheme, simplified answers, (which candidates often do not write in examinations), will generally appear in brackets. Marks should be awarded for either the form preceding the bracket or the form in brackets (if it is seen).

Example: for differentiating $f(x)=2 \sin (5 x-3)$, the markscheme gives:

$$
f^{\prime}(x)=(2 \cos (5 x-3)) 5 \quad(=10 \cos (5 x-3))
$$

Award $A 1$ for $(2 \cos (5 x-3)) 5$, even if $10 \cos (5 x-3)$ is not seen.

## 10 Accuracy of Answers

Candidates should NO LONGER be penalized for an accuracy error (AP).
If the level of accuracy is specified in the question, a mark will be allocated for giving the answer to the required accuracy. When this is not specified in the question, all numerical answers should be given exactly or correct to three significant figures. Please check work carefully for FT.

11 Crossed out work
If a candidate has drawn a line through work on their examination script, or in some other way crossed out their work, do not award any marks for that work.

12 Calculators
A GDC is required for paper 3, but calculators with symbolic manipulation features (for example, TI-89) are not allowed.

## Calculator notation

The Mathematics HL guide says:
Students must always use correct mathematical notation, not calculator notation.
Do not accept final answers written using calculator notation. However, do not penalize the use of calculator notation in the working.

## 13 More than one solution

Where a candidate offers two or more different answers to the same question, an examiner should only mark the first response unless the candidate indicates otherwise.

1. (a) $a=1 \quad b=8 \quad c=4$
$d=8 \quad e=4 \quad f=2$
$g=4 \quad h=2 \quad i=1$
Note: Award $\boldsymbol{A} \mathbf{3}$ for 9 correct answers, $\boldsymbol{A 2}$ for 6 or more, and $\boldsymbol{A 1}$ for 3 or more.
(b)

| Elements | Order |
| :---: | :---: |
| 1 | 1 |
| $4,11,14$ | 2 |
| $2,7,8,13$ | 4 |

Note: Award $\boldsymbol{A} \mathbf{3}$ for 8 correct answers, $\boldsymbol{A} \mathbf{2}$ for 6 or more, and $\boldsymbol{A 1}$ for 4 or more.
(c) $\{1,4\},\{1,11\},\{1,14\}$

A1A1
Note: Award $\boldsymbol{A 1}$ for 1 correct answer and $\boldsymbol{A 2}$ for all 3 (and no extras).
(d) $\{1,2,4,8\},\{1,4,7,13\}$,

A1A1
$\{1,4,11,14\}$ A2
2. (a) METHOD 1
$f(x)=f(y) \Rightarrow \frac{4 x+1}{2 x-1}=\frac{4 y+1}{2 y-1}$
for attempting to cross multiply and simplify
$(4 x+1)(2 y-1)=(2 x-1)(4 y+1)$
$\Rightarrow 8 x y+2 y-4 x-1=8 x y+2 x-4 y-1 \Rightarrow 6 y=6 x$
$\Rightarrow x=y$
hence an injection

## METHOD 2

$f^{\prime}(x)=\frac{4(2 x-1)-2(4 x+1)}{(2 x-1)^{2}}=\frac{-6}{(2 x-1)^{2}}$
$<0$ (for all $x \neq 0.5$ )
therefore the function is decreasing on either side of the discontinuity and $f(x)<2$ for $x<0.5$ and $x>2$ for $f(x)>0.5$
hence an injection
Note: If a correct graph of the function is shown, and the candidate states this is decreasing in each part (or horizontal line test) and hence an injection, award M1A1R1.
(b) METHOD 1
attempt to solve $y=\frac{4 x+1}{2 x-1}$
M1
$y(2 x-1)=4 x+1 \Rightarrow 2 x y-y=4 x+1 \quad$ A1
$2 x y-4 x=1+y \Rightarrow x=\frac{1+y}{2 y-4}$
no value for $y=2$
R1
hence not a surjection
$\boldsymbol{A} G$
[4 marks]

## METHOD 2

consider $y=2 \quad$ A1
attempt to solve $2=\frac{4 x+1}{2 x-1} \quad$ M1
$4 x-2=4 x+1 \quad$ A1
which has no solution $\boldsymbol{R 1}$
hence not a surjection $\boldsymbol{A G}$
Note: If a correct graph of the function is shown, and the candidate states that because there is a horizontal asymptote at $y=2$ then the function is not a surjection, award M1R1.
3. (a) $q \circ p=(13)(25)(125)$

$$
=\left(\begin{array}{ll}
153
\end{array}\right)
$$

Note: $\boldsymbol{M 1}$ for an answer consisting of disjoint cycles, $\boldsymbol{A 1}$ for (1 5 3), A1 for either (2) or (2) omitted.

Note: Allow $\left(\begin{array}{lllll}1 & 2 & 3 & 4 & 5 \\ 5 & 2 & 1 & 4 & 3\end{array}\right)$
If done in the wrong order and obtained (132), award $\boldsymbol{A} \boldsymbol{2}$.
(b) (i) any cycle with length 4 eg (1 234 4)
(ii) any permutation with 2 disjoint cycles one of length 2 and one of length $3 \mathrm{eg}(12)(345)$

Note: Award M1A0 for any permutation with 2 non-disjoint cycles one of length 2 and one of length 3.
Accept non cycle notation.
(c) (i) $(1,2),(1,3),(1,4),(1,5)$

M1A1
(ii) (2 3), (2 4), (2 5), (3 4), (35), (45) 6

Note: Award M1 for at least one correct cycle.
4.
(a) $\quad f\left(e_{G}\right)=e_{H} \Rightarrow f\left(a * a^{-1}\right)=e_{H}$ M1
$f$ is a homomorphism so $f\left(a * a^{-1}\right)=f(a) \circ f\left(a^{-1}\right)=e_{H}$ M1A1
by definition $f(a) \circ(f(a))^{-1}=e_{H}$ so $f\left(a^{-1}\right)=(f(a))^{-1}$ (by the leftcancellation law)
(b) from (a) $f\left(x^{-1}\right)=(f(x))^{-1}$
hence $f\left(x^{-1}\right)=\left(p^{2}\right)^{-1}=p^{5}$
M1A1
[2 marks]
(c) $\quad f(x * y)=f(x) \circ f(y)$ (homomorphism)
(M1)
$p^{2} \circ f(y)=p$ A1
$f(y)=p^{5} \circ p$
(M1)
$=p^{6}$
5. (a) in a finite group the order of any subgroup (exactly) divides the order of the group
(b) METHOD 1

$$
\begin{equation*}
\left(a * b^{-1}\right) *\left(b * a^{-1}\right)=a * b^{-1} * b * a^{-1}=a * e * a^{-1}=a * a^{-1}=e \tag{M1A1A1}
\end{equation*}
$$

Note: $\boldsymbol{M 1}$ for multiplying, $\boldsymbol{A 1}$ for at least one of the next 3 expressions, A1 for $e$.
Allow $\left(b * a^{-1}\right) *\left(a * b^{-1}\right)=b * a^{-1} * a * b^{-1}=b * e * b^{-1}=b * b^{-1}=e$.

## METHOD 2

$\left(a * b^{-1}\right)^{-1}=\left(b^{-1}\right)^{-1} * a^{-1}$
M1A1
$=b * a^{-1}$
(c) $a * a^{-1}=e \in H$ (as $H$ is a subgroup)

M1
so $a R a$ and hence $R$ is reflexive
$a R b \Leftrightarrow a * b^{-1} \in H . H$ is a subgroup so every element has an inverse in $H$ so
$\left(a * b^{-1}\right)^{-1} \in H$
R1
$\Leftrightarrow b * a^{-1} \in H \Leftrightarrow b R a$
M1
so $R$ is symmetric
$a R b, b R c \Leftrightarrow a * b^{-1} \in H, b * c^{-1} \in H$
M1
as $H$ is closed $\left(a * b^{-1}\right) *\left(b * c^{-1}\right) \in H \quad \boldsymbol{R 1}$
and using associativity $\boldsymbol{R 1}$
$\left(a * b^{-1}\right) *\left(b * c^{-1}\right)=a *\left(b^{-1} * b\right) * c^{-1}=a * c^{-1} \in H \Leftrightarrow a R c \quad$ A1
therefore $R$ is transitive
$R$ is reflexive, symmetric and transitive
Note: Can be said separately at the end of each part.
hence it is an equivalence relation
(d) $a R b \Leftrightarrow a * b^{-1} \in H \Leftrightarrow a * b^{-1}=h \in H$
$\Leftrightarrow a=h * b \Leftrightarrow a \in H b$

## Question 5 continued

(e) (d) implies that the right cosets of $H$ are equal to the equivalence classes of the
relation in (c) hence the cosets partition $G \quad \boldsymbol{R 1}$
all the cosets are of the same size as the subgroup $H$ so the order of $G$ must be a multiple of $|H|$
