## Mathematics <br> Higher level <br> Paper 3 - discrete mathematics

Wednesday 18 May 2016 (morning)

1 hour

## Instructions to candidates

- Do not open this examination paper until instructed to do so.
- Answer all the questions.
- Unless otherwise stated in the question, all numerical answers should be given exactly or correct to three significant figures.
- A graphic display calculator is required for this paper.
- A clean copy of the mathematics HL and further mathematics HL formula booklet is required for this paper.
- The maximum mark for this examination paper is [60 marks].

Please start each question on a new page. Full marks are not necessarily awarded for a correct answer with no working. Answers must be supported by working and/or explanations. In particular, solutions found from a graphic display calculator should be supported by suitable working. For example, if graphs are used to find a solution, you should sketch these as part of your answer. Where an answer is incorrect, some marks may be given for a correct method, provided this is shown by written working. You are therefore advised to show all working.

1. [Maximum mark: 9]
(a) Use the Euclidean algorithm to show that 1463 and 389 are relatively prime.
(b) Find positive integers $a$ and $b$ such that $1463 a-389 b=1$.
2. [Maximum mark: 12]

The weights of the edges in the complete graph $G$ are shown in the following table.

|  | A | B | C | D | E | F |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| A | - | 14 | 10 | 8 | 12 | 9 |
| B | 14 | - | 9 | 12 | 10 | 13 |
| C | 10 | 9 | - | 7 | 8 | 13 |
| D | 8 | 12 | 7 | - | 9 | 11 |
| E | 12 | 10 | 8 | 9 | - | 11 |
| F | 9 | 13 | 13 | 11 | 11 | - |

(a) Starting at A, use the nearest neighbour algorithm to find an upper bound for the travelling salesman problem for $G$.
(b) By first removing A, use the deleted vertex algorithm to find a lower bound for the travelling salesman problem for $G$.
3. [Maximum mark: 10]

Throughout this question, $(a b c \ldots)_{n}$ denotes the number $a b c \ldots$ written with number base $n$.
For example (359) $)_{n}=3 n^{2}+5 n+9$.
(a) (i) Given that $(43)_{n} \times(56)_{n}=(3112)_{n}$, show that $3 n^{3}-19 n^{2}-38 n-16=0$.
(ii) Hence determine the value of $n$.
(b) Determine the set of values of $n$ satisfying $(13)_{n} \times(21)_{n}=(273)_{n}$.
(c) Show that there are no possible values of $n$ satisfying $(32)_{n} \times(61)_{n}=(1839)_{n}$.
4. [Maximum mark: 17]
(a) Solve the recurrence relation $v_{n}+4 v_{n-1}+4 v_{n-2}=0$ where $v_{1}=0, v_{2}=1$.
(b) Use strong induction to prove that the solution to the recurrence relation $u_{n}-4 u_{n-1}+4 u_{n-2}=0$ where $u_{1}=0, u_{2}=1$ is given by $u_{n}=2^{n-2}(n-1)$.
(c) Find a simplified expression for $u_{n}+v_{n}$ given that,
(i) $n$ is even.
(ii) $n$ is odd.
5. [Maximum mark: 12]

The simple, connected graph $G$ has $e$ edges and $v$ vertices, where $v \geq 3$.
(a) Show that the number of edges in $G^{\prime}$, the complement of $G$, is $\frac{1}{2} v^{2}-\frac{1}{2} v-e$.

Given that both $G$ and $G^{\prime}$ are planar and connected,
(b) show that the sum of the number of faces in $G$ and the number of faces in $G^{\prime}$ is independent of $e$;
(c) show that $v^{2}-13 v+24 \leq 0$ and hence determine the maximum possible value of $v$.
