

Mathematics Higher level Paper 3 – discrete mathematics

Monday 8 May 2017 (afternoon)

1 hour

Instructions to candidates

- Do not open this examination paper until instructed to do so.
- Answer all the questions.
- Unless otherwise stated in the question, all numerical answers should be given exactly or correct to three significant figures.
- A graphic display calculator is required for this paper.
- A clean copy of the **mathematics HL and further mathematics HL formula booklet** is required for this paper.
- The maximum mark for this examination paper is [50 marks].

Please start each question on a new page. Full marks are not necessarily awarded for a correct answer with no working. Answers must be supported by working and/or explanations. In particular, solutions found from a graphic display calculator should be supported by suitable working. For example, if graphs are used to find a solution, you should sketch these as part of your answer. Where an answer is incorrect, some marks may be given for a correct method, provided this is shown by written working. You are therefore advised to show all working.

1. [Maximum mark: 16]

- (a) Use the Euclidean algorithm to find the greatest common divisor of 264 and 1365. [5]
- (b) (i) Hence, or otherwise, find the general solution of the Diophantine equation

$$264x - 1365y = 3.$$

(ii) Hence find the general solution of the Diophantine equation

$$264x - 1365y = 6.$$
 [8]

(c) By expressing each of 264 and 1365 as a product of its prime factors, determine the lowest common multiple of 264 and 1365.

2. [Maximum mark: 12]

The weights of the edges in the complete graph G are given in the following table.

| | A | В | C | D | Е | F |
|---|----|----|----|----|----|----|
| A | _ | 4 | 9 | 8 | 14 | 6 |
| В | 4 | _ | 1 | 14 | 9 | 3 |
| C | 9 | 1 | _ | 5 | 12 | 2 |
| D | 8 | 14 | 5 | _ | 11 | 12 |
| Е | 14 | 9 | 12 | 11 | _ | 7 |
| F | 6 | 3 | 2 | 12 | 7 | _ |

- (a) Starting at A, use the nearest neighbour algorithm to find an upper bound for the travelling salesman problem for G.
- (b) By first deleting vertex A, use the deleted vertex algorithm together with Kruskal's algorithm to find a lower bound for the travelling salesman problem for G.

[5]

[7]

[3]

3. [Maximum mark: 9]

- (a) In the context of graph theory, explain briefly what is meant by
 - (i) a circuit;
 - (ii) an Eulerian circuit.
- (b) The graph G has six vertices and an Eulerian circuit. Determine whether or not its complement G' can have an Eulerian circuit.
- (c) Find an example of a graph *H*, with five vertices, such that *H* and its complement *H'* both have an Eulerian trail but neither has an Eulerian circuit. Draw *H* and *H'* as your solution.
- 4. [Maximum mark: 13]

Consider the recurrence relation $au_{n+2} + bu_{n+1} + cu_n = 0$, $n \in \mathbb{N}$ where a, b and c are constants. Let α and β denote the roots of the equation $ax^2 + bx + c = 0$.

(a) Verify that the recurrence relation is satisfied by

$$u_n = A\alpha^n + B\beta^n$$
,

where A and B are arbitrary constants.

(b) Solve the recurrence relation

 $u_{n+2} - 2u_{n+1} + 5u_n = 0$ given that $u_0 = 0$ and $u_1 = 4$. [9]
