

**Physics**  
**Standard level**  
**Paper 2**

Thursday 10 May 2018 (afternoon)

Candidate session number

1 hour 15 minutes

--	--	--	--	--	--	--	--	--	--

**Instructions to candidates**

- Write your session number in the boxes above.
- Do not open this examination paper until instructed to do so.
- Answer all questions.
- Answers must be written within the answer boxes provided.
- A calculator is required for this paper.
- A clean copy of the **physics data booklet** is required for this paper.
- The maximum mark for this examination paper is **[50 marks]**.

Answer **all** questions. Answers must be written within the answer boxes provided.

1. An elastic climbing rope is tested by fixing one end of the rope to the top of a crane. The other end of the rope is connected to a block which is initially at position A. The block is released from rest. The mass of the rope is negligible.

The unextended length of the rope is 60.0 m. From position A to position B, the block falls freely.

- (a) At position B the rope starts to extend. Calculate the speed of the block at position B. [2]

.....

.....

.....

.....

.....

- (b) At position C the speed of the block reaches zero. The time taken for the block to fall between B and C is 0.759 s. The mass of the block is 80.0 kg.

- (i) Determine the magnitude of the average resultant force acting on the block between B and C. [2]

.....

.....

.....

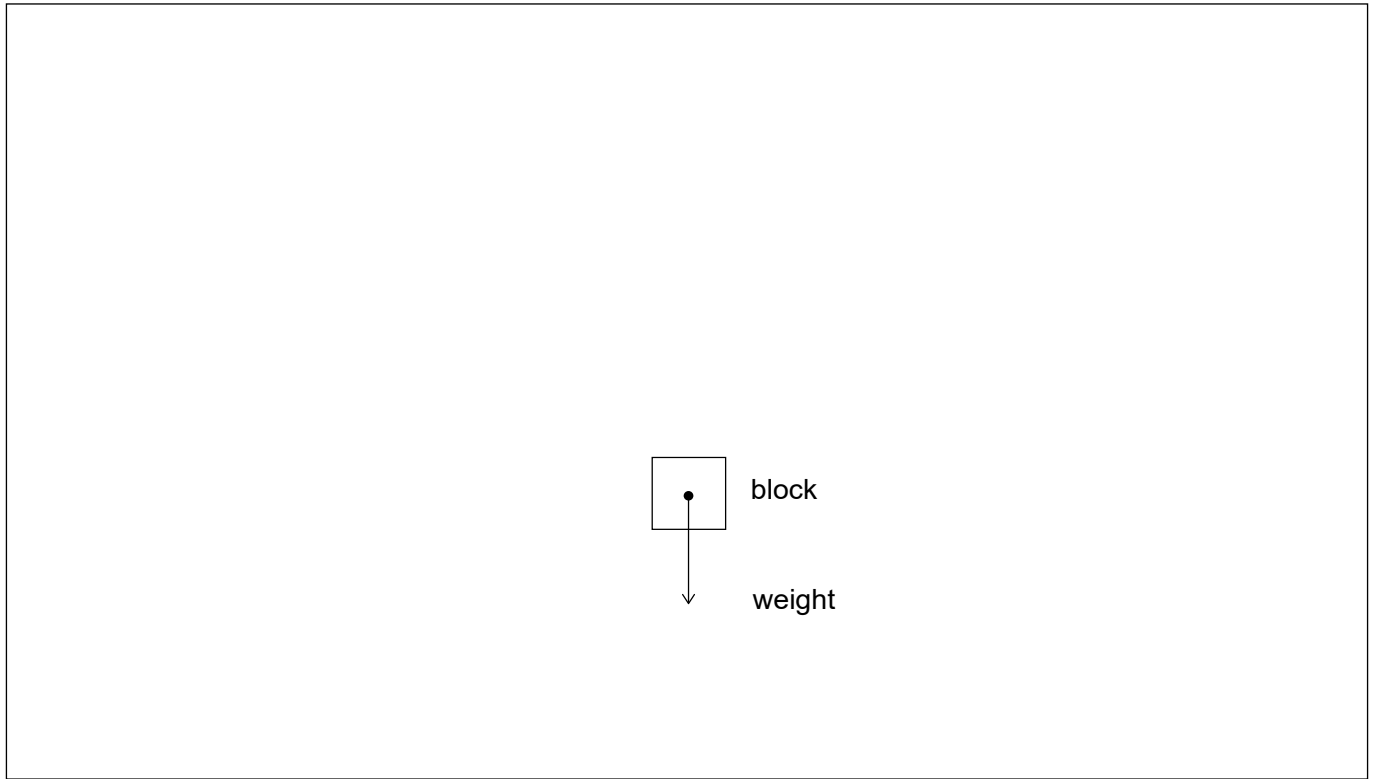

.....

(This question continues on the following page)

**(Question 1 continued)**

- (ii) Sketch on the diagram the average resultant force acting on the block between B and C. The arrow on the diagram represents the weight of the block. [2]

- (iii) Calculate the magnitude of the average force exerted by the rope on the block between B and C. [2]

.....

.....

.....

.....

**(This question continues on the following page)**

Turn over

**(Question 1 continued)**

(c) For the rope and block, describe the energy changes that take place

(i) between A and B.

[1]

.....  
.....

(ii) between B and C.

[1]

.....  
.....

(d) The length reached by the rope at C is 77.4 m. Suggest how energy considerations could be used to determine the elastic constant of the rope.

[2]

.....  
.....  
.....  
.....

2. A closed box of fixed volume  $0.15\text{ m}^3$  contains  $3.0\text{ mol}$  of an ideal monatomic gas. The temperature of the gas is  $290\text{ K}$ .

(a) Calculate the pressure of the gas. [1]

.....  
.....

(b) When the gas is supplied with  $0.86\text{ kJ}$  of energy, its temperature increases by  $23\text{ K}$ . The specific heat capacity of the gas is  $3.1\text{ kJ kg}^{-1}\text{ K}^{-1}$ .

(i) Calculate, in kg, the mass of the gas. [1]

.....  
.....

(ii) Calculate the average kinetic energy of the particles of the gas. [1]

.....  
.....

(c) Explain, with reference to the kinetic model of an ideal gas, how an increase in temperature of the gas leads to an increase in pressure. [3]

.....  
.....  
.....  
.....  
.....  
.....

3. A beam of coherent monochromatic light from a distant galaxy is used in an optics experiment on Earth.

(a) The beam is incident normally on a double slit. The distance between the slits is 0.300 mm. A screen is at a distance  $D$  from the slits. The diffraction angle  $\theta$  is labelled.

(i) A series of dark and bright fringes appears on the screen. Explain how a dark fringe is formed. [3]

.....

.....

.....

.....

.....

.....

(ii) The wavelength of the beam as observed on Earth is 633.0 nm. The separation between a dark and a bright fringe on the screen is 4.50 mm. Calculate  $D$ . [2]

.....

.....

.....

.....

(This question continues on the following page)

**(Question 3 continued)**

(b) The air between the slits and the screen is replaced with water. The refractive index of water is 1.33.

(i) Calculate the wavelength of the light in water. [1]

.....  
.....

(ii) State **two** ways in which the intensity pattern on the screen changes. [2]

.....  
.....  
.....  
.....

4. An ohmic conductor is connected to an ideal ammeter and to a power supply of output voltage  $V$ .

The following data are available for the conductor:

density of free electrons	$= 8.5 \times 10^{22} \text{ cm}^{-3}$
resistivity	$\rho = 1.7 \times 10^{-8} \Omega\text{m}$
dimensions	$w \times h \times l = 0.020 \text{ cm} \times 0.020 \text{ cm} \times 10 \text{ cm}$ .

The ammeter reading is 2.0A.

- (a) Calculate the resistance of the conductor. [2]

.....

.....

.....

.....

- (b) Calculate the drift speed  $v$  of the electrons in the conductor in  $\text{cm s}^{-1}$ .  
State your answer to an appropriate number of significant figures. [3]

.....

.....

.....

.....

.....

5. An electron moves in circular motion in a uniform magnetic field.

The velocity of the electron at point P is  $6.8 \times 10^5 \text{ ms}^{-1}$  in the direction shown.  
The magnitude of the magnetic field is 8.5 T.

(a) State the direction of the magnetic field. [1]

.....  
.....

(b) Calculate, in N, the magnitude of the magnetic force acting on the electron. [1]

.....  
.....

(c) Explain why the electron moves  
(i) at constant speed. [1]

.....  
.....

(ii) on a circular path. [2]

.....  
.....  
.....  
.....

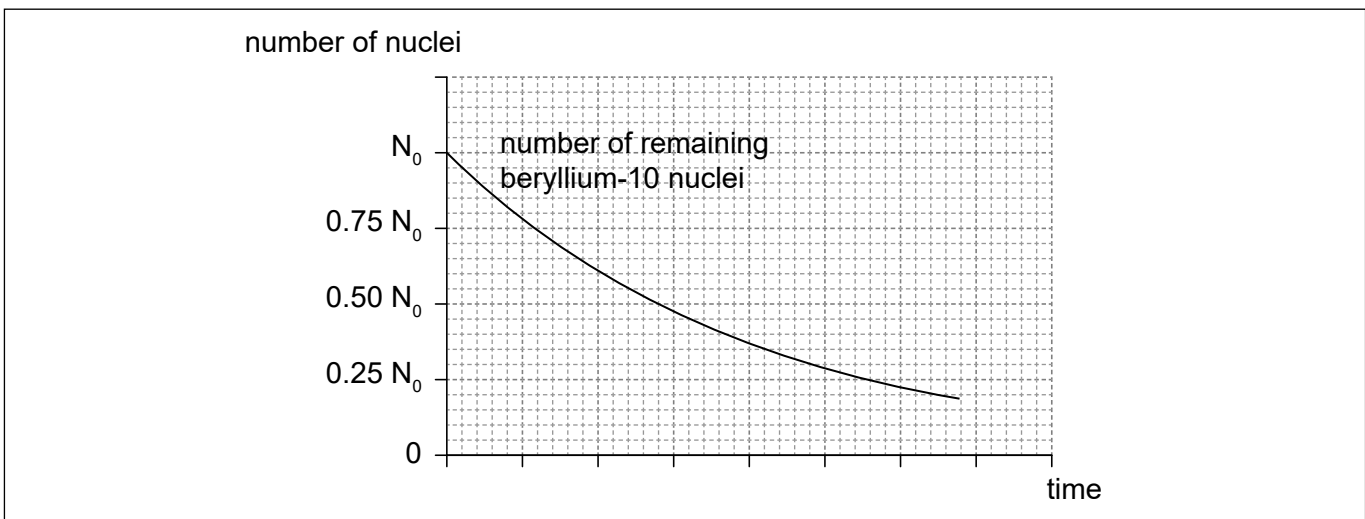

6. The radioactive nuclide beryllium-10 (Be-10) undergoes beta minus ( $\beta^-$ ) decay to form a stable boron (B) nuclide.

(a) Identify the missing information for this decay.

[1]

(b) The initial number of nuclei in a pure sample of beryllium-10 is  $N_0$ . The graph shows how the number of remaining **beryllium** nuclei in the sample varies with time.

(i) On the graph, sketch how the number of **boron** nuclei in the sample varies with time.

[2]

(ii) After  $4.3 \times 10^6$  years,

$$\frac{\text{number of produced boron nuclei}}{\text{number of remaining beryllium nuclei}} = 7.$$

Show that the half-life of beryllium-10 is  $1.4 \times 10^6$  years.

[3]

.....

.....

.....

.....

.....

.....

(This question continues on the following page)

12EP10

**(Question 6 continued)**

- (iii) Beryllium-10 is used to investigate ice samples from Antarctica. A sample of ice initially contains  $7.6 \times 10^{11}$  atoms of beryllium-10. State the number of remaining beryllium-10 nuclei in the sample after  $2.8 \times 10^6$  years.

[1]

.....
.....

**(This question continues on the following page)**

12EP11

Turn over

**(Question 6 continued)**

(c) An ice sample is moved to a laboratory for analysis. The temperature of the sample is  $-20^{\circ}\text{C}$ .

(i) State what is meant by thermal radiation. [1]

.....  
.....

(ii) Discuss how the frequency of the radiation emitted by a black body can be used to estimate the temperature of the body. [2]

.....  
.....  
.....  
.....

(iii) Calculate the peak wavelength in the intensity of the radiation emitted by the ice sample. [2]

.....  
.....  
.....  
.....

(iv) Derive the units of intensity in terms of fundamental SI units. [2]

.....  
.....  
.....  
.....
