Chemistry
Standard level
Paper 2

18 May 2026

Zone A morning | **Zone B** morning | **Zone C** morning

Session number

1 hour 30 minutes

--	--	--	--	--	--	--	--	--	--

Instructions to students

- Write your session number in the boxes above.
- Do not open this examination paper until instructed to do so.
- Answer all questions.
- Answers must be written within the answer boxes provided.
- A calculator is required for this paper.
- A clean copy of the **chemistry data booklet** is required for this paper.
- The maximum mark for this examination paper is **[50 marks]**.

Answer **all** questions. Answers must be written within the answer boxes provided.

1. Sulfuric acid, H_2SO_4 , is one of the highest-volume chemicals produced in the world.

- (a) (i) The first step in the synthesis of sulfuric acid is to burn solid sulfur, S_8 , to produce sulfur dioxide, SO_2 .

Determine the volume, in dm^3 , of sulfur dioxide produced from 15.0 g of sulfur, at STP, using section 2 of the data booklet.

[2]

.....

.....

.....

.....

- (ii) Calculate the new volume, in dm^3 , of sulfur dioxide if the temperature changes to 25.0°C , using the final volume from (a)(i).

Use sections 1, 2 and 4 of the data booklet.

If you did not obtain an answer for (a)(i) use 15.0dm^3 , although this is not the correct answer.

[1]

.....

.....

.....

.....

(This question continues on the following page)

(Question 1 continued)

- (b) Sulfur dioxide is converted to sulfur trioxide.

- (i) Identify the oxidation state of sulfur in both compounds. [1]

Compound	Oxidation state of sulfur
SO ₂	
SO ₃	

- (ii) State the equilibrium constant expression, K , for this reaction. [1]

.....

.....

- (iii) State, with a reason, the effect of increasing the temperature on the value of the equilibrium constant, K . [1]

.....

.....

- (iv) Discuss the effect of decreasing the volume of the system on the position of equilibrium and the value of K . [2]

Position of equilibrium:

.....

.....

Value of K :

.....

.....

(This question continues on the following page)

(Question 1 continued)

- (c) The final synthetic step can be summarized as:

Describe the types of bonding found in the concentrated aqueous sulfuric acid product. [2]

.....

.....

.....

.....

- (d) Sulfuric acid, H_2SO_4 , is strong, while sulfurous acid, H_2SO_3 , is weak.

- (i) Outline the difference between a strong and a weak acid. [1]

.....

.....

(This question continues on the following page)

(Question 1 continued)

- (ii) Deduce the Lewis formula and the molecular geometry for the sulfite ion, SO_3^{2-} . [2]

Lewis formula:

Molecular geometry:

.....

(This question continues on page 7)

Please **do not** write on this page.

Answers written on this page
will not be marked.

(Question 1 continued)

- (e) Sulfuric acid is used as the electrolyte in a lead-acid cell. Lead, Pb, is the anode in the cell.

Deduce the overall reaction for the cell.

[1]

.....

- (f) Energy can be produced by a fuel cell with hydrogen gas at the anode and oxygen gas at the cathode with a base as the electrolyte.

- (i) Deduce the half-equations for the electrode reactions in this fuel cell.

[2]

Anode half-equation:

.....

Cathode half-equation:

.....

- (ii) Hydrogen produces a line emission spectrum with **four** lines in the visible region.

Discuss **two** properties of the current atomic model supported by the line emission spectrum of hydrogen.

[2]

.....

2. Potassium, K, is a reactive metal.

(a) (i) State the number of protons, electrons and neutrons in $^{39}\text{K}^+$. [2]

Protons:	
Electrons:	
Neutrons:	

(ii) State the full electron configuration for $^{39}\text{K}^+$. [1]

.....

(iii) The relative atomic mass, A_r , of K is 39.10. [2]

Isotope	Mass	Percent abundance
^{39}K		93.26 %
^{41}K	40.96	6.730 %

Determine the relative mass of the first isotope of K to four significant figures, showing your work.

.....
.....
.....
.....

(This question continues on the following page)

(Question 2 continued)

- (b) (i) Explain why K has a lower first ionization energy than calcium, Ca. [2]

.....

.....

.....

.....

- (ii) Outline why K has a lower electronegativity than sodium, Na. [1]

.....

.....

.....

.....

- (c) (i) Write the equation for the reaction of K with water, H₂O, including state symbols. [2]

.....

.....

- (ii) Describe the type of bonding in K and H₂O and how the valence electrons in each produce these types of bonds. [2]

	Type of bonding	How valence electrons produce bonds
K		
H ₂ O		

3. Propane, $\text{CH}_3\text{CH}_2\text{CH}_3$, is a common fuel.

- (a) (i) Determine the enthalpy of combustion of propane, in kJ mol^{-1} , using table 12 in the data booklet. [3]

.....

.....

.....

.....

.....

.....

- (ii) Calculate the mass, in g, of carbon dioxide, CO_2 , produced when 25.0 g of propane react with 95.0 g of oxygen, showing your work. [3]

.....

.....

.....

.....

.....

.....

(This question continues on the following page)

(Question 3 continued)

(b) Propane reacts with bromine, Br_2 , to form 2-bromopropane.

(i) Explain, using equations, the initiation step and **two** propagation steps for this reaction.

[3]

Initiation:

.....

Propagation:

.....

.....

.....

(ii) State **one** termination step for this reaction.

[1]

.....

.....

(This question continues on the following page)

(Question 3 continued)

- (c) Propan-2-ol can form by reacting propene with water in the presence of an acid catalyst.

- (i) Explain why increasing the temperature would increase the rate of this reaction. [2]

.....

- (ii) Explain the relative solubility of propan-2-ol and propene in water. [2]

.....

- (iii) Propene can also form a polymer.

Draw a section of the polymer with three repeating units.

[1]

- (d) Propan-2-ol will react with acidified potassium dichromate, $\text{K}_2\text{Cr}_2\text{O}_7$, which is an oxidizing agent.

State the name of the product of this reaction.

[1]

.....

4. Potassium hydroxide, KOH, can neutralize organic acids.

(a) Calculate the pH of a $0.0685 \text{ mol dm}^{-3}$ solution of potassium hydroxide.

[2]

.....

.....

.....

.....

(b) A sample of the potassium hydroxide solution is gradually added to 50.0 cm^3 of an aqueous solution of an unknown organic acid, producing the following pH curve.

Calculate the concentration of the unknown organic acid.

[2]

.....

.....

.....

.....
