Subject Details: Physics SL Paper 2 Markscheme

Mark Allocation

Candidates are required to answer ALL questions. Maximum total = [50 marks].

1. Each row in the “Question” column relates to the smallest subpart of the question.
2. The maximum mark for each question subpart is indicated in the “Total” column.
3. Each marking point in the “Answers” column is shown by means of a tick (✓) at the end of the marking point.
4. A question subpart may have more marking points than the total allows. This will be indicated by “max” written after the mark in the “Total” column. The related rubric, if necessary, will be outlined in the “Notes” column.
5. An alternative wording is indicated in the “Answers” column by a slash (/). Either wording can be accepted.
6. An alternative answer is indicated in the “Answers” column by “**OR**” between the alternatives. Either answer can be accepted.
7. An alternative markscheme is indicated in the “Answers” column under the heading **ALTERNATIVE 1** etc. Any alternative can be accepted.
8. Words in angled brackets « » in the “Answers” column are not necessary to gain the mark.
9. Words that are underlined are essential for the mark.
10. The order of marking points does not have to be as in the “Answers” column, unless stated otherwise in the “Notes” column.
11. If the candidate’s answer has the same “meaning” or can be clearly interpreted as being of equivalent significance, detail and validity as that in the “Answers” column then award the mark. Where this point is considered to be particularly relevant in a question it is emphasized by **OWTTE** (or words to that effect) in the “Notes” column.
12. Remember that many candidates are writing in a second language. Effective communication is more important than grammatical accuracy.
13. Occasionally, a part of a question may require an answer that is required for subsequent marking points. If an error is made in the first marking point then it should be penalized. However, if the incorrect answer is used correctly in subsequent marking points then **follow through** marks should be awarded. When marking, indicate this by adding **ECF** (error carried forward) on the script. “Allow ECF” will be displayed in the “Notes” column.
14. Do **not** penalize candidates for errors in units or significant figures, **unless** it is specifically referred to in the “Notes” column.
15. Allow reasonable substitutions where in common usage, eg ° for rad

Question			Answers	Notes	Total
1.	a	i	Voltage across 180 Ω resistor / $12 - 3.0 = 9.0 \text{ V}$ ✓ $I \llcorner = \frac{V}{R} = \frac{9}{180} = \llcorner 0.050\text{A} \llcorner \checkmark$	MP1 can be awarded if 9/180 is seen without showing the subtraction. Calculation needed for MP2	[2]
	a	ii	ALTERNATIVE 1 Total resistance of thermistor and 240 Ω resistor is $R = \frac{3.0}{0.050} = 60\Omega$ ✓ $\frac{1}{60} = \frac{1}{240} + \frac{1}{R} \Rightarrow R = 80\Omega \checkmark$ ALTERNATIVE 2 Current in 240 Ω resistor $I = \frac{3.0}{240} = 0.0125\text{A}$ so current in thermistor is $I = 0.050 - 0.0125 = 0.0375\text{A} \checkmark$ $R = \frac{3.0}{0.0375} = 80\Omega \checkmark$		[2]
	b		resistance decreases in total circuit/parallel combination ✓ hence current increases ✓ «since pd across R1 increases» pd across R2 will decrease ✓		[3]

Question			Answers	Notes	Total
2.	a		An amount of energy of $0.25 \times 2100 \times 32 = 1.680 \times 10^4$ J will be transferred to the ice from the water «bringing the ice to 0 °C » ✓ A mass $\frac{1.680 \times 10^4}{334 \times 10^3} = 0.0503$ kg of water will freeze into ice «at to 0 °C» ✓	<i>Must see full substitution OR answer to 3 (or more) significant figures.</i> <i>Watch for backwards working (setting the two Qs equal and using the 50 g to confirm equality). This only earns MP1.</i>	[2]

Question			Answers	Notes	Total
3.	a	i	$E \ll \frac{V}{d} = \frac{14}{3.0 \times 10^{-2}} = 4.7 \times 10^2 \checkmark$ NC^{-1} OR $\text{Vm}^{-1} \checkmark$	<i>Allow 4.7 V cm^{-1} if proper unit is shown.</i> <i>Allow fractional units (e.g. N/C).</i> <i>Accept other units (e.g. $\text{kg m s}^{-3} \text{ A}^{-1}$ or $\text{kg m s}^{-2} \text{ C}^{-1}$) that are valid units of E Field strength regardless of answer in MP1.</i>	[2]
	a	ii	$F = \ll qE \gg 1.6 \times 10^{-19} \times 467 = 7.47 \times 10^{-17} \text{ N} \checkmark$ $a = \frac{F}{m} = \frac{7.47 \times 10^{-17}}{1.673 \times 10^{-27}} = 4.46 \times 10^{10} \text{ m s}^{-2} \checkmark$	<i>Award [1 max] for “backwards working” from show that value</i> <i>Must see full substitution OR answer to 3 (or more) significant figures for MP2.</i>	[2]

3.	a	iii	ALTERNATIVE 1 Time to travel length of plates is $t = \ll \frac{L}{v} = \frac{16 \times 10^{-2}}{2.0 \times 10^5} \Rightarrow 8.0 \times 10^{-7} \text{ s} \checkmark$ Vertical distance fallen in this time is $y = \ll \frac{1}{2}at^2 = \frac{1}{2} \times 4.46 \times 10^{10} \times (8.0 \times 10^{-7})^2 \Rightarrow 1.43 \times 10^{-2} \text{ m} \checkmark$ 1.43 cm < 1.5 cm so proton does not hit plate $\checkmark$ ALTERNATIVE 2 Time to fall 1.5 cm $t = \ll \sqrt{\frac{2s}{a}} = \sqrt{\frac{2 \times 1.5 \times 10^{-2}}{4.46 \times 10^{10}}} \Rightarrow 8.20 \times 10^{-7} \text{ s} \checkmark$ Horizontal distance travelled in this time is $x = \ll vt = 2.0 \times 10^5 \times 8.165 \times 10^{-7} \Rightarrow 0.164 \text{ m} \checkmark$ 16.4 cm > 16 cm so proton does not hit plate $\checkmark$ ALTERNATIVE 3 Time to travel length of plates is $t = \ll \frac{L}{v} = \frac{16 \times 10^{-2}}{2.0 \times 10^5} \Rightarrow 8.0 \times 10^{-7} \text{ s} \checkmark$ Time to fall 1.5 cm $t = \ll \sqrt{\frac{2s}{a}} = \sqrt{\frac{2 \times 1.5 \times 10^{-2}}{4.46 \times 10^{10}}} \Rightarrow 8.20 \times 10^{-7} \text{ s} \checkmark$ 800 ns < 820 ns so does not hit plate $\checkmark$	<i>In all alternative responses we must see an explicit comparison (it is not enough just to say yes or no)</i>	[3]
----	---	-----	---	--	-----

	b	i	Alpha particle has more «4x» the mass AND more charge «2x» therefore the acceleration is smaller « half » ✓ It will not hit the plate ✓		[2]
	b	ii	$B = \llcorner \frac{E}{v} = \frac{4.667 \times 10^2}{2.0 \times 10^5} \Rightarrow 2.3 \times 10^{-3} \text{ T} \checkmark$ Into the page « by any rule for magnetic direction » ✓	<i>Do not accept just “down” but allow ⊗.</i>	[2]

Question			Answers	Notes	Total
4.	a	i	Helium ✓		[1]
	a	ii	The «inward» gravitational pressure ✓ is balanced by the outward radiation/ thermal pressure ✓	<i>Accept forces instead of pressure.</i>	[2]
	b	i	$\Delta m = 2 \times 15.9949 - 27.9769 - 4.0026$ OR $1.03 \times 10^{-2} \text{ u} \checkmark$ $Q = \llcorner 1.03 \times 10^{-2} \times 931.5 = \gg 9.6 \text{ MeV} \checkmark$		[2]

4.	b	ii	High Z nuclei must overcome a high coulomb/electrostatic repulsion «barrier in order to fuse» ✓ This requires high «core» temperatures «that can only be found in order to fuse» ✓		[2]
	b	iii	For elements heavier than iron, fusion would require energy/energy is absorbed «rather than released» ✓ Iron has the highest/maximum binding energy per nucleon ✓ Iron is at the peak of the binding energy per nucleon curve ✓		[1] max
	b	iv	It is/will become a supergiant AND then will explode/supernova ✓ It will become a neutron star/black hole ✓		[2]

Question			Answers	Notes	Total
5.	a		Force is proportional to the stretch/extension/compression/displacement OR Force is equal to the spring constant times the stretch/extension/compression/displacement ✓	<i>Do not accept “linear” for proportional.</i>	[1]
	b	i	Use of $v^2 = 0^2 + 2gL \Rightarrow v = \sqrt{2gL}$ / $mgL = \frac{1}{2}mv^2 \Rightarrow v = \sqrt{2gL}$ ✓ $v = \llcorner \sqrt{2 \times 9.8 \times 2.2} \Rightarrow 6.567 \text{ m s}^{-1} \approx 6.6 \text{ m s}^{-1}$ ✓		[2]

5.	b	ii	ALTERNATIVE 1 Use of conservation of energy at S and B: $\frac{1}{2}kx^2 = mg(L + x)$ ✓ $k = \left\langle \frac{2 \times 4.0 \times 9.8 \times (2.2 + 0.58)}{0.58^2} \right\rangle = \gg 648 \text{ Nm}^{-1}$ ✓ ALTERNATIVE 2 Use of conservation of energy at A and B: $\frac{1}{2}kx^2 = mgx + \frac{1}{2}mv^2$ ✓ $k = \left\langle \frac{2 \times 4.0 \times 9.8 \times 0.58 + 4.0 \times 6.567^2}{0.58^2} \right\rangle = \gg 648 \text{ Nm}^{-1}$ ✓	Must see full substitution OR answer to 3 (or more) significant figures for MP2.	[2]
	b	iii	No ✓ because the net force is non-zero OR forces are not balanced OR object is accelerating upwards OR tension force is greater than gravitational force ✓	Award [1 max] for “yes” <u>only</u> if candidate specifies that the forces are balanced.	[2]

5.	b	iv	<i>ALTERNATIVE 1: Impulse Momentum</i> $\Delta p \ll = 4(6.57) \gg = 26.28 \text{ kg m s}^{-1} \checkmark$ $F_{\text{net}} \ll = \frac{\Delta p}{\Delta t} = \frac{26.28}{0.13} \gg = 202.2 \text{ N} \checkmark$ $F_{\text{rope}} \ll = F_{\text{net}} + mg = 202.16 + 39.24 \gg = 241.4 \text{ N} \checkmark$ <i>ALTERNATIVE 2: Average Acceleration</i> $a \ll = \frac{\Delta v}{\Delta t} = \frac{6.57}{0.13} \gg = 50.5 \text{ m s}^{-2} \checkmark$ $F_{\text{net}} \ll = ma = 4.0 \times 50.5 \gg = 202.2 \text{ N} \checkmark$ $F_{\text{rope}} \ll = F_{\text{net}} + mg = 202.16 + 39.24 \gg = 241.4 \text{ N} \checkmark$		[3]
----	---	----	--	--	-----

5.	c	i	ALTERNATIVE 1 $T = 2\pi\sqrt{\frac{m}{k}} \Rightarrow f = \frac{1}{2\pi}\sqrt{\frac{k}{m}} \quad \checkmark$ $f = \frac{1}{2\pi}\sqrt{\frac{504}{0.200}} = 7.99 \text{ Hz} \quad \checkmark$ ALTERNATIVE 2 $T = \llcorner 2\pi\sqrt{\frac{m}{k}} \Rightarrow 2\pi\sqrt{\frac{0.200}{504}} = 0.12516 \text{ s} \quad \checkmark$ $f = \frac{1}{2\pi}\sqrt{\frac{504}{0.200}} = \frac{1}{0.12516} = 7.99 \text{ Hz} \quad \checkmark$ ALTERNATIVE 3 $\omega^2 = \frac{k}{m} = \frac{504}{0.2} = 2520 \text{ s}^{-1} \text{ leading to } \omega = 50.2 \text{ s}^{-1} \quad \checkmark$ $f = \llcorner \frac{\omega}{2\pi} \Rightarrow \frac{50.2}{(2\pi)} = 7.99 \text{ Hz} \quad \checkmark$	Must see full substitution OR answer to 3 (or more) significant figures for MP2. Do not allow a simple $\frac{1}{T} = 8$ for ALT 2 MP2 (must see $\frac{1}{\text{MP1}}$ result).	[2]
	c	ii	$\lambda = \frac{v}{f} = \frac{1.6}{8.0} \quad \text{OR} \quad \lambda = vT = 1.6 \times 0.125 \quad \checkmark$	Must see the equation used AND the full substitution for the mark.	[1]
	c	iii	Path difference (p.d.) is 2 /whole number of wavelengths/lengths are divisible by / both path lengths are multiples of $\checkmark$ hence waves are in phase at P $\checkmark$	Do not award MP2 if MP1 is missing	[2]

5.	c	iv	A maximum/peak/constructive interference/double amplitude « will be observed » ✓ Because the path difference at Q is $6.5 - 5.5 = 1$ / an integral multiple of the wavelength OR arrive trough to trough OR maxima line up OR waves arrive in phase ✓		[2]
	d		ALTERNATIVE 1 Next possible p.d. is $n = 3$ OR 3 ✓ $\lambda \llcorner = \frac{\text{p.d.}}{n} = \frac{0.4}{3} = 0.13 \text{ m } \checkmark$ $f = \frac{v}{\lambda} = \frac{1.6}{0.13} = 12.3 \text{ Hz } \checkmark$ ALTERNATIVE 2 $0.40 = n\lambda = n \frac{v}{f} = n \frac{1.6}{f} \quad \checkmark$ $f = \llcorner n \frac{1.6}{0.40} \gg 4n \quad \checkmark$ $f_{\min} = 4 \times 3 = 12 \text{ Hz } \checkmark$		[3]
